BOUNDARY VALUE PROBLEMS IN
CYLINDRICAL COORDINATES Note that $J_\alpha(0) = 0$ if $\alpha > 0$ and $J_0(0) = 1$, while the second solution Y satisfies $\lim_{x \rightarrow 0^+} Y(x) = -\infty$. Hence, if the solution $y(x)$ is bounded in the interval $(0, \epsilon)$ (with $\epsilon > 0$), then necessarily $B = 0$. We can rewrite equation (1) in a self-adjoint form by dividing by x and noticing
