

## 15 N Labelled Urea Recovery By

Thank you very much for reading **15 n labelled urea recovery by**. Maybe you have knowledge that, people have look numerous times for their chosen novels like this 15 n labelled urea recovery by, but end up in malicious downloads. Rather than reading a good book with a cup of coffee in the afternoon, instead they are facing with some malicious virus inside their desktop computer.

15 n labelled urea recovery by is available in our digital library an online access to it is set as public so you can download it instantly.

Our book servers spans in multiple countries, allowing you to get the most less latency time to download any of our books like this one.

Kindly say, the 15 n labelled urea recovery by is universally compatible with any devices to read

If you have an internet connection, simply go to BookYards and download educational documents, eBooks, information and content that is freely available to all. The web page is pretty simple where you can either publish books, download eBooks based on authors/categories or share links for free. You also have the option to donate, download the iBook app and visit the educational links.

### 15 N Labelled Urea Recovery

15N-labeled urea was used to compare basal, tillering, and panicle fertilizer-N recovery efficiencies of water saving irrigation. The plant panicle fertilizer-recovery efficiency was greater than the basal and tillering fertilizer-recovery efficiency.

### Recovery efficiency and loss of 15N-labelled urea in a ...

The objectives of this study was to determine the influence of tillage, time of application and method of placement on the recovery of 15 N-labelled urea in barley (*Hordeum vulgare* L.) plants and in soil. Field experiments were conducted during 1984–85 at two locations (Rimbey and Ellerslie) in north-central Alberta.

Abstract 15 N-labelled urea (30 kg N ha<sup>-1</sup>) was sprayed on to the foliage of winter wheat at four sites where sufficient fertiliser N had previously been applied to the soil to achieve approximately maximum yield.

## **Recovery of 15N-labelled urea applied to the foliage of ...**

Results of a two year study on the fate on 15 N-labelled urea (9.95 atoms percent excess 15 N) applied @ 180 kg N/ha to flooded rice in monolith lysimeters at the Punjab Agricultural University Farm, Ludhiana are reported. The soil of the experimental field was sandy clay loam in texture (Typic Ustochrept), had pH 7.9, organic carbon 0.36 percent, available N 187 kg/ha and total N 0.08 percent.

To investigate such factors, and seasonal effects, field experiments were carried out using 15N-labelled urea (PU) and urea supergranules (USG). The recovery of fertilizer 15N by the plant and retention in the soil were studied in both dry and wet seasons.

The fate of fertilizer nitrogen (N) applied to a semidwarf bread wheat system was determined in microplots receiving 41 kg N ha<sup>-1</sup> in the form of urea labelled with 5.617 % atom excess 15 N, without and with the application of phosphorus (P) at 20 kg P ha<sup>-1</sup>.

Band application of urea gave complete 15 N recovery (102%) in the dry season and low recovery (61%) in the wet. Nitrogen-15 balance data showed that 22 to 56% of the applied urea-N still remained in the soil after the final harvest. The uptake by the wet season crop of the residual labeled soil N from the dry season experiment was about 5% of the initial applied N (87 kg N/ha) for all treatments.

Excretion of both total 15 N and urea- 15 N was subnormal and elimination was virtually completed 36 hr after administration of the isotope. During recovery from kwashiorkor total 15 N excretion had approached normal a month after commencement of rehabilitation. Urea- 15 N excretion was still slightly subnormal after 3 months.

Recovery of 15 N-labelled urea-N in grain ranged from 4.5 to 26.7% with foliar application, and from 32.3 to 70.1% with soil application. Amending the urea solution with the urease inhibitor N-(n-butyl) thiophosphoric triamide (NBPT) improved recovery of soil-applied N in exp. 1 only and did not increase N recovery from foliar applications.

1. Labelling plants with 15 N and 13 C stable isotopes usually require cultivation of plants in isotopically enriched soil and gas-tight labelling chambers - both approaches are not suitable if one aims to investigate in situ species interactions in real plant communities.. 2. In this greenhouse experiment, we tested a labelling method in which dual-labelled (15 N, 13 C) urea solution is brushed ...

NUE (average 24%<sup>15</sup>N applied) and the total recovery of fertilizer<sup>15</sup>N in the soil-plant system (i.e., 40% in GS1 and 62% in GS4) were low. Low NUE resulted mainly from the dilution in a large soil mineral N pool derived from earlier applications of the labeled-N fertilizer applied at
