To graph a linear equation, you could make a table of values to plot, but first you'll need to know how to make the table. Take a look at this tutorial! You'll see how to set up a table, choose appropriate x-values, plug those values into the equation, and simplify to get the respective y-values.

Linear equations are equations of two variables that form a line on the graph. A linear equation is defined where each term is either a constant or a product of a constant and a single variable. There are many different ways that linear equations can be represented algebraically and plotted graphically.

Example: $y = 2x + 1$ is a linear equation:
The graph of $y = 2x + 1$ is a straight line .
When x increases, y increases twice as fast, so we need $2x$; When x is 0, y is already 1. So $+1$ is also needed; And so:
 $y = 2x + 1$; Here are some example values:
