## Acces PDF Alternate Fruit Bearing Of Temperate Fruit Tree Enrych

Biennial bearing (or alternate) bearing is a term used in pomology to refer to trees that have an irregular crop load from year to year. In the "on" year too much fruit is set, leading to small fruit size. Excess weight in the main branches can be too much for their mechanical resistance, causing them to break.

### **Biennial bearing - Wikipedia**

Alternate bearing is a widely spread phenomenon, occurring in both deciduous and evergreen fruit plants. It is a problem in most polycarpic fruit crops. Olive shows extreme alternation even more than mango, which is considered as a highly alternate bearer fruit crop in India.
