AbstractMarine invertebrate larvae have often been reared in artificial rather than natural seawater, either for convenience or to avoid potentially confounding effects of unknown contaminants. This study sought to determine the impact of artificial seawater on various aspects of development for three marine invertebrate species. We examined the impact of Instant Ocean on growth, survival, and ...

Instant Ocean Versus Natural Seawater: Impacts on Aspects ...

Although bivalves comprise a very large class of animals, they exhibit relatively few behaviors during reproduction and development. Most marine bivalves free spawn, releasing sperm and eggs into the water where fertilization occurs; the larvae then mature as plankton (Atlas of Invertebrate Reproduction and Development).
