An ampere (A) is a measure for electric current. A kelvin (K) is a measure for temperature. A mole (mol) is the amount of substance (based on number of atoms rather than mass.) A candela (cd) is a measure for luminous intensity. The Lumen (lm) is a measure unit for total amount light visible for the human eye emitted by a source.

For that reason, physics uses a number of measurement systems, such as the CGS (centimeter-gram-second) system and the MKS (meter-kilogram-second) system. You also use the standard English system of inches and feet and so on — that's the FPI (foot-pound-inch) system. The most common measurement system in introductory physics is the MKS system.

Basic Physics and Measurement in Anaesthesia by P. D. Davis, G. D. Parbrook, Gavin N. C. Kenny Book Resume: As in the previous editions, the authors have clearly defined the principles of clinical measurement. Mathematics are kept to a simple, understandable level with the frequent use of practical examples.

Physics and Measurement. "By a comparison of the results of accurate measurements with the numerical predictions of the theory, we can gain considerable confidence that the theory is correct, and we can determine in what respects it needs to be modified. It is often possible to explain a phenomenon in several rough qualitative ways, and if we are content with that, it may be impossible to decide which theory is correct.
