Rock Layer Correlation Lab Correlation is the process used by geologists (or stratigraphers) to “match” rock layers and formations of one outcrop to rock layers and formations of another outcrop that are of similar age. Correlation is done by matching rock layers by rock type, grain size, the presence of fossils and other distinctive features.

Earth Science - Red Hook Central Schools

Rock Correlation Base your answers to questions 7 through 9 on the geologic cross section below, which shows a view of rock layers at Earth's surface. The dashed lines connect points of the same age. Major fossils contained within each rock layer are shown. The valleys are labeled X, Y, and Z. 7.
