Animals: Common and Scientific Names

Scientific and common names. Scientific names. The scientific name of a species is governed by internationally accepted rules that determine what the name is and insure that each species has only one. Thus scientific names are the same in every locality and in every language. Each scientific name of a species is two words (a binomen)—the first is the name of the genus to which the species is assigned, the second is the specific name.

Scientific and common names

Scientific names or Binomial Nomenclature is a scientific process wherein entities such as plants, animals, living entities are named and they are derived from Latin.
