Data Dictionary - Data Flow Diagram

A timestamp data type stores a point in time with arbitrary precision. Every occupied_room record will also have a reference to the room number being rented and indirectly via hosted_at to the guests who stayed at this room. We also added the table room_type to the data model; the idea is to group the rooms by room category or room type. For example "standard one double bed", "luxury 2 double beds" can be type descriptions.

Designing a Data Model for a Hotel Room Booking System

A data dictionary is a file or a set of files that contains a database's metadata. The data dictionary contains records about other objects in the database, such as data ownership, data relationships to other objects, and other data. The data dictionary is a crucial component of any relational database. Ironically, because of its importance, it ...
