MECHANICAL VIBRATIONS & INDUSTRIAL NOISE CONTROL

The last several lectures deal with mechanical vibration. Up to now in the course considerable emphasis has been placed on finding equations of motion of mechanical systems. The study of vibration will emphasize the analysis of the solution of the equations of motion of a particularly important class of dynamics problems: the vibration of machines.

Sound is the mechanical vibrations of particles in a medium. When a sound wave is introduced in a material, the particles in the material vibrate about a fixed point at the same frequency as the sound wave. The particles do not travel with the wave but react to the energy of the wave. It is the energy of the wave that moves through the material.
