The growth and development of the wheat plant is a complex process. During the life cycle of the plant, many of the growth stages overlap, and while one part of the plant may be developing another part may be dying. Figure iii

Wheat Growth Stages in Relation to Management Practices

The vegetative stage of wheat can be
classified into three stages: tillering,

If this node is visible (or can be felt), your wheat is at jointing (growth stage 6). At growth stage 6, the node is above the soil line and appears as a slightly swollen area of a slightly different shade of green from the rest of the stem. If the node is not yet visible, the wheat is probably at Feekes growthstage 5. Feekes growth stage 6 usually occurs
