4eBooks has a huge collection of computer programming ebooks. Each downloadable ebook has a short review with a description. You can find over thousand of free ebooks in every computer programming field like .Net, Actionscript, Ajax, Apache and etc.

## **History Of Research On Tumor**

The field of cancer research had begun to grow rapidly by the end of the 19th century and the beginning of the 20th. In Europe, spontaneous tumors had been propagated in mice, and Gaylord and Tyzzer, two of the founders of the American Association for Cancer Research (AACR), soon expanded this research in America.

Our history traces back to the 1980s, with the founding of our two legacy organizations - the National Brain Tumor Foundation and the Brain Tumor Society. In 2008, the two groups strengthened their collective efforts by merging to form the National Brain Tumor Society (NBTS). The National Brain Tumor Foundation (NBTF) was founded in 1981 by a small group of San Francisco-based healthcare providers and people whose lives had been affected by brain tumors.

Cancer research has been ongoing for centuries. Early research focused on the causes of cancer. Percivall Pott identified the first environmental trigger (chimney soot) for cancer in 1775 and cigarette smoking was identified as a cause of lung cancer in 1950. Early cancer treatment focused on improving surgical techniques for removing tumors.

## **Cancer research - Wikipedia**

In 1937, Congress established the National Cancer Act of 1937 to provide additional support for cancer research – it was the first time Congress had appropriated funds toward a non-communicable disease. The Act established the National Cancer Institute (NCI) as the federal government's primary agency to address research and training needs for the cause, diagnosis, and treatment of cancer.

The earliest known descriptions of cancer appear in several papyri from Ancient Egypt. The Edwin Smith Papyrus was written around 1600 BC (possibly a fragmentary copy of a text from 2500 BC) and contains a description of cancer, as well as a procedure to remove breast tumours by cauterization, wryly stating that the disease has no treatment.
