How Economics Shapes Science offers a good descriptive overview of the current state of how science is conducted (mainly in the US). But Stephan doesn't dig into much of the economics, describing some of the basic problems, such as poor incentives or misallocation of time and money but not pursuing some of the economic reasons behind many of these (or the adjustments that could be made to change/correct them).

I recently finished a very interesting and useful book entitled, "How Economics Shapes Science," written by the economist Paula Stephan (Professor of Economics, Georgia State University and a member of the National Bureau of Economic Research). Stephan is an economist who accidentally became an expert in science economics, a little vignette that sets a nice tone for the book, which is superb overall — well-written, smartly structured, and well-referenced.
