Modularity of mind is the notion that a mind may, at least in part, be composed of innate neural structures or mental modules which have distinct, established, and evolutionarily developed functions. However, different definitions of "module" have been proposed by different authors. According to Fodor, the author of Modularity of Mind, a system can be considered 'modular' if its functions are made of multiple dimensions or units to some degree. One example of modularity in the mind is 'binding'.

### The Modularity of Mind (Fodor, 1983)

The term "meaning holism" is generally applied to views that treat the meanings of all of the words in a language as interdependent. Holism draws much of its appeal from the way in which the usage of all our words seems interconnected, and runs into many problems because the resultant view can seem to conflict with (among other things) the intuition that meanings are by and large shared ...
