W.C.Y Lee Mobile cellular Telecommunication 2nd Edition.

A cellular network or mobile network is a communication network where the last link is wireless. The network is distributed over land areas called "cells", each served by at least one fixed-location transceiver, but more normally, three cell sites or base transceiver stations. These base stations provide the cell with the network coverage which can be used for transmission of voice, data, and ...

Cellular network - Wikipedia

A basic analog cellular system, consists of three subsystems: a mobile unit, a cell site, and a mobile telephone switching office (MTSO), as Fig. 2.1 shows, with connections to link the three subsystems.
