A code with this ability to reconstruct the original message in the presence of errors is known as an error-correcting code. This triple repetition code is a Hamming code with  $m = 2$ , since there are two parity bits, and  $2^2 - 2 - 1 = 1$  data bit. Such codes cannot correctly repair all errors, however. In our example, if the channel flips two ...

Frank R. Kschischang, in Network Coding, 2012. This chapter introduces the network coding with particular emphasis on the single-source multicasting problem. Network coding is based on a simple, yet far-reaching idea. In a packet network, rather than simply routing packets, intermediate nodes may compute and transmit functions of the packets that they receive.
