PALM is an advanced
and modern
meteorological model
system for atmospheric
and oceanic boundary-
layer flows. It has been

developed as a
turbulence-resolving
large-eddy simulation
(LES) model that is
especially designed for
performing on
massively parallel
computer

architectures. Since
PALM 5.0, the model is
shipped along with
several PALM-4U (PALM
for urban applications,
read: PALM for you)
components that allow
to employ the model
for various urban
