The Munsell Soil Color Book establishes a vocabulary we can use to record this evidence. The fine, predictable variations in hue and chroma help archaeologists see color variation more effectively. Students during their first dig tend to call dirt "brown."

Understanding Brown Soils: Why Archaeologists Love Munsell ...

In colorimetry, the Munsell color system is a color space that specifies colors based on three properties of color: hue, chroma, and value. It was created by Professor Albert H. Munsell in the first decade of the 20th century and adopted by the United States Department of Agriculture as the official color system for soil research in the 1930s. Several earlier color order systems had placed colors into a three-dimensional color solid of one form or another, but Munsell was the first to
