What is the distinction between flexfields and application features? Flexfields, while they are a major feature of the Oracle E-Business Suite as a whole, are merely a mechanism to provide many application features. Key flexfields provide a flexible way for the Oracle E-Business Suite to represent objects such as accounting codes, part numbers, job descriptions, and more. For example, the Accounting Flexfield is a feature that uses a key flexfield to represent accounting codes throughout ...

The reference field could be a :BLOCK.FIELD (Oracle Forms only) or a profile option (\$PROFILES\$ reference). During runtime, the flexfields engine reads the value of the reference field and tries to use the same value for the DFF context value. This context value has to be available in the DFF metadata if synchronization has been enabled.
