Futures contracts are a way for supply chain actors to hedge against changes in market prices on goods, as well as a way that long-term investors and day traders can profit from these fluctuations. Day traders can profit greatly from futures trading, but the risks are substantial.

Futures: What Are They? - The Balance

A typical margin can be anywhere from 10 to 20 percent of the price of the contract. Let's use our IBM example to see how this plays out. If you're going long, the futures contract says you'll buy \$5,000 worth of IBM stock on April 1. For this contract, you'd pay 20 percent of \$5,000, which is \$1,000.

Also, prices in the future markets tend to move faster than in the cash or spot markets. A word of caution, however: just as wins can come quicker, futures also magnify the risk of losing money.

Advantages Of Trading Futures Over Stocks

Unlike stock trading - where the goal is to profit from an appreciation of the amount invested - the goal in futures trading is to profit by predicting volatility often precipitated by ephemeral if not Biblical variables: weather, consumer confidence, strikes, panic, political upheaval, pestilence and mania.

CHICAGO, Aug 4 (Reuters) - U.S. live cattle futures weakened on Tuesday, snapping a five-session streak of gains, as traders took some risk off the table. Hog futures were slightly firmer. Investors shrugged off signs of strength in the cash cattle markets, concerned that the streak that pushed the October contract to a five-month high had run too far given current market conditions.
