## **Statistics and probability? - Answers**

Answer & Explanation Answer: A)  $2/91$

Explanation: Let  $S$  be the sample space. Then,  $n(S)$  = number of ways of drawing 3 balls out of 15 =  $15 C 3 = 15 * 14 * 13 / 3 * 2 * 1 = 455$ . Let  $E$  = event of getting all the 3 red balls.  $n(E) = 5 C 3 = 5 * 4 * 3 / 3 * 2 * 1 = 10$ .  $\Rightarrow P(E) = n(E)/n(S) = 10/455 = 2/91$ .

percentage, solve the problem as you normally would, then convert the answer into a percent. For example, if the number of desired outcomes divided by the number of possible events is .25, multiply the answer by 100 to get 25%.

## **4 Ways to Calculate Probability - wikiHow**

Statistics isn't the easiest subject too unfortunately. This is because it involves a whole barrage of formulae not to mention applied math concepts that one has to remember. A simple mistake in a formula will obviously lead to an incorrect answer since statistics is a very precise subject and outcomes are known in advance.
