The Rehabilitation Complexity Scale: extended (version 13)

The Rehabililitaton Complexity Scales provide a simple measure of complexity of rehabilitation needs, which take account of basic care, specialist nursing, therapy and medical interventions. The extended version (RCS-E) presented here may offer a more sensitive tool for detecting patients with highly complex needs for therapy and equipment in specialist rehabilitation settings.

The Rehabilitation Complexity Scale Extended (RCS-E) provides a simple overall measure of Care, Nursing, Therapy, Medical and Equipment needs, and is designed to offer crude banding of complexity. The RCS-E is useful, timely to complete and a good indication of caseload and is part of the minimum dataset for neurological units. The RCS-E (version 12) is a 20 point measure:

One of the pernicious problems in large-scale software development is cross-team coordination. Most large-scale Agile methods focus on product and portfolio coordination, but there's a harder problem out there: coordinating the engineering work.. Poor engineering coordination leads to major problems: bugs, delays, production outages.
