walking, but disappears after a few minutes of rest.

Peripheral artery disease (PAD) - Symptoms and causes ...

An ultrasound examination revealed a deep venous thrombosis of the leg, secondary to extrinsic compression of the common femoral vein. Three years prior to our procedure, the cyst was aspirated, which partially relieved the patient's symptoms.

Clinical applications of doppler ultrasound (Book) | OSTI.GOV

Median arcuate ligament syndrome (MALS) describes the clinical presentation associated with direct compression of the celiac artery by the median arcuate ligament. The poorly understood pathophysiologic mechanism, variable symptom severity, and unpredictable response to treatment make MALS a controversial diagnosis.
