LORD OF THE FLIES

NEW EDUCATIONAL EDITION

Faber & Faber A plane crashes on a desert island and the only survivors, a group of schoolboys, assemble on the beach and wait to be rescued. By day they inhabit a land of bright fantastic birds and dark blue seas, but at night their dreams are haunted by the image of a terrifying beast. As the boys' delicate sense of order fades, so their childish dreams are transformed into something more primitive, and their behaviour starts to take on a murderous, savage significance. First published in 1954, *Lord of the Flies* is one of the most celebrated and widely read of modern classics. Now fully revised and updated, this educational edition includes chapter summaries, comprehension questions, discussion points, classroom activities, a biographical profile of Golding, historical context relevant to the novel and an essay on *Lord of the Flies* by William Golding entitled 'Fable'. Aimed at Key Stage 3 and 4 students, it also includes a section on literary theory for advanced or A-level students. The educational edition encourages original and independent thinking while guiding the student through the text - ideal for use in the classroom and at home.

COGNITION, METACOGNITION, AND READING

Springer Science & Business Media We had our first conversation about cognition, metacognition, and reading in September of 1976. Our particular concern was with reading and learning to read, and what, if anything, meta cognition might have to do with it all. We didn't really know much about metacognition then, of course, but then most other people were in the same predicament. Some people had been working with interesting approaches and results on metalanguage and reading, among them J. Downing, L. Ehri, L. Gleitman, I. Mattingly, and E. Ryan, and it also was about that time that people were becoming aware of E. Markman's first studies of comprehension monitoring. Other than that perhaps the most influential item around was the perhaps already "classic" monograph by Kruetzer, Leonard, and Flavell on what children know about their own memory. Also in the air at that time were things like A. Brown's notions about "knowing, knowing about know ing, and knowing how to know," D. Meichenbaum's ideas about cognitive behavior modification, and the work by A. Brown and S. Smiley on the awareness of important units in text. Even though these developments were cited as new and innovative, it was not the case that psychologists had never before been of questions. They certainly interested in, or concerned with metacognitive sorts had, as clearly evidenced by the notion of "metaplans", in Miller, Galanter, and Pribram's *Plans and the Structure of Behavior*.

A complete list of his published papers, in order of publication, appears in the Bibliography of T.D. Lee. The papers have been arranged into ten categories, in most cases according to the subject matter. At the beginning of each of the first eight categories of papers, there is a commentary on the content and significance of all of the papers in the category. The two short final categories do not have any commentaries. The editor would like to thank Dr. Richard Friedberg for his assistance in the early stages of the editorial work on this project, as well as for writing commentaries on the papers of Categories III and IV. I would also like to thank Dr. Norman Christ for writing the commentary on the papers of Category VII.
