**NEET is amongst one the most prestigious medical entrance exams in India. With just a few months left for the examination, it becomes quite challenging for students to cover all the concepts included in the NEET syllabus thoroughly. However, a proper study plan designed as per the latest examination pattern and the syllabus can help students to prepare all the important concepts in shorter time duration. Given below are few useful tips that can assist the students in tackling multiple-choice questions in NEET exam accurately. In most of the multiple choice questions, the options are designed in a very tricky and confusing manner. In most of the cases, all the given options seem to be correct in some aspect. Therefore, the students are advised to read the entire question very carefully. Try to accumulate all the information provided in the question effectively because in some of the cases you can easily evaluate the correct answers from the question itself. If you are muddled by the given options, then, give each option a true and false test. Instead of getting confused, consider all the possibilities and neglect the incorrect options. Hence, in this way, the most appropriate answer could be easily spotted. Use a step wise approach to solve conceptual and complex questions. Several times Matching type Questions are asked where the students are required to find the mismatched or the correctly matched option. Some of the questions asked in the NEET exam are entirely memory-based; therefore, the students are advised to memorize the common names, scientific names, concepts and important definitions. Around 40% of the questions asked in the NEET exam are application-based. Therefore, students need to focus more on the concepts along with its applications in order to score well in the examination. The students must primarily focus on reading NCERT textbooks. Several times the questions asked in NEET exam are taken directly from the NCERT textbooks. Initially avoid answering those questions for which you are not confident because your wrong answer may reduce your final score. In order to utilize your time appropriately, divide the three hours of examination time as per your comfort among Physics, Chemistry, and Biology. Initially, focus on attempting all easy questions and later on pick the difficult ones. By this way, your confidence will be elevated and you will also get more time to answer hard questions. Practice previous years' question papers/mock tests and sample papers to get an idea on how to answer MCQ questions efficiently. Preparing at an early stage is what an MCQ**

exam requires. Avoid guesswork for negative marking questions as they might lower your final score. These tips can be very helpful for students to answer difficult and brain teaser questions. Prior preparations and practice are mandatory aspects of any examination. Hence, to crack highly competitive examination like NEET, it is mandatory for students to prepare well and acquire the skills to tackle multiple choice questions effectively. Rather than just following mere guesswork, the aspirants can focus on the tips discussed to tackle Multiple Choice Questions in NEET in the right manner.

Multiple Choice Questions on Basic Medical Sciences *Universiti Malaysia Sabah Press* Multiple Choice Questions on Basic Medical Sciences could help students to learn and get acquainted with the questions that are generally asked in multiple choice questions (MCQ) examinations in basic medical sciences subjects - anatomy, physiology, biochemistry and pharmacology. The medical curriculum has moved away from the traditional system to integrated-holistic system over the years. Many

medical schools have adopted integration in preclinical and clinical years and students will be evaluated across their subjects as clinical and basic sciences knowledge amalgamates the holistic human body. Integration will allow the student to understand the intricate body systems comprehensively and homeostasis and pathological derangements in the human body. MCQ-form of examinations is the complex type of evaluations where students find them as most tedious forms of evaluation. Unless a student has in-depth knowledge in the content of the subject, seldom they answer the MCQ correctly. Students need to get good exposure and practice while preparing for MCQ examinations. There are very few reference books available on MCQ, students being in the transition period in preclinical years from fresh high school graduation, basic sciences years of medical education need extra efforts to learn and understand. A form of guide or reference to learn the MCQ evaluation is a dire need for the students. This short book on MCQ will definitely help medical, nursing and allied health sciences students as basic sciences are the foundation for future clinical years. Student's curiosity to learn medical subjects through multiple choice questions shall enhance their deep learning and reasoning as clinical conditions needs a reference on normal body structure and functions. The aim of this collection of over 230 questions is to offer students an element of self-assessment, as they progress through the companion book or revise for examinations. Lecturers may find some of the questions useful as a template when setting questions of their own, but should note that the questions are primarily educational in intent; their discriminatory power has not been tested. The questions are grouped under the same headings as the chapters of the companion textbook, so they become progressively more advanced (see Contents). Occasional statements call for information from later chapters. Medically relevant questions are introduced wherever they are appropriate. I have set at least one question on each learning objective given at the start of the chapter in the companion volume, to help you assess your achievement of the learning objectives. Some questions require you to integrate information from other chapters too. The questions aim to test basic understanding, fundamental principles and medical relevance. Hopefully they avoid excessive detail - always the examiner's easy option! The questions. Most of the questions are multiple choice questions (MCQs), generally with five true/false statements, but occasionally more or less than five. Although some 'educationalists' now demand single correct answer questions (SAQs, one correct answer out of four or five options), these test less knowledge, so the MCQ style has been retained here. To add variety, there is a sprinkling of other styles of question, such as 'extended matching questions' (i.e. choose the best answer from a list), data interpretation problems, and little numerical problems that test reasoning power and ability to do simple calculations. The answers. Each answer is accompanied

by a brief explanation, and very often an illustrative figure, which should help if you got the answer wrong. Most of the figures are from the accompanying textbook, but there are also new, explanatory diagrams after some questions. It is sometimes difficult to avoid ambiguity in MCQ questions; so use your common sense - choose the answer that will be right most of the time, rather than a remote, rare possibility. Nevertheless, if you disagree with the 'official' answer, do let me know. MCQs and EMQs in Human Physiology, 6th Edition *CRC Press* There has been a marked change in examination strategy over the last five years; EMQs (extended matching questions) are popular with tutors and students alike as they present a more realistic view of a student's ability to apply his or her knowledge in a clinical situation.
