This assumption was debunked with the knowledge that nurses were always engaged in knowledge development, driven by their experiences in clinical practice. Because of these assumptions, most of the early writing about theory development was about outlining strategies that should be used, rather than strategies that have already been used in the discipline to develop theories. Theorists themselves did not uncover or adequately discuss ways by which they developed their theories, therefore the tendency was to describe processes that were based on theories developed in other disciplines, mainly the physical and social sciences. And an implicit assumption was made that there should be a single strategy for theory development, some claiming to begin the process from practice, and others believing it should be driven by research"--Provided by publisher. The Ethic of Care: A Moral Compass for Canadian Nursing Practice (Revised Edition) *Bentham Science Publishers* There is an increased use of technology and informatics, heavier workloads and constant changes in the way in which disease processes are managed. Yet, when compared with other health professionals, nurses still spend a great deal of time in direct contact with patients and clients. They stay at the bedside, listen to their stories, give comfort and advocate. The Ethic of Care: A Moral Compass for Canadian Nursing Practice is unique from other nursing ethics textbooks in several key ways. The book adds a heightened dimension to the already rich knowledge in the field of applied nursing ethics and the ethic of care. The author argues that the ethic of care, or the moral imperative to act justly, be the guiding compass for everything that nurses do. It is with passion and conviction that nurses are encouraged to embody the ethic of care as a "lived virtue." Nurses are also inspired to be the leaders of tomorrow by working toward achieving accountability and sustainability in the Canadian publicly funded health care system and by effectively addressing social inequities. At the end of each chapter the author conveys real life case studies, as derived from her experiences as a critical care nurse, psychiatric nurse clinician and former Coroner. These vignettes bring the subject to life and serve as a means for applying newly acquired ethical knowledge. The aim of this book is to inspire nurses to be as skillful, and compassionate as they can be so that they will leave every encounter with their clients, better than when they first arrived. The book attempts to inspire nurses to be ethical leaders for social change at the patient/client, community and global level. This revised edition of the book includes additional information about trauma-informed care to combat systemic racism and improve the health outcomes for Indigenous people; ethics, gender and sexual orientation is dealt with in an inclusive and sensitive way, and a new Code of Conduct has been included.
