What can be made of these test results in the context of current scientific knowledge about human evolution and cognition? Unfortunately, discussion of these issues has tended to generate more heat than light. Now, the distinguished authors of this book offer powerful new illumination. Representing a range of disciplines--psychology, anthropology, biology, economics, history, philosophy, sociology, and statistics--the authors review the concept of race and then the concept of intelligence. Presenting a wide range of findings, they put the experience of the United States--so frequently the only focus of attention--in global perspective. They also show that the human species has no "races" in the biological sense (though cultures have a variety of folk concepts of "race"), that there is no single form of intelligence, and that formal education helps individuals to develop a variety of cognitive abilities. **Race and Intelligence** offers the most comprehensive and definitive response thus far to claims of innate differences in intelligence among races. **Psychometric Tests (the Ultimate Guide)** [How2Become Ltd](#) United States Congressional Serial Set, 1858-'59 (Classic Reprint) [Forgotten Books](#) Excerpt from United States Congressional Serial Set, 1858-'59 On 25 288225 on Eu \$2588 955m 25 v.02. How much of a role does genetics or environment play in accounting for reasoning skill and other intellectual aptitudes? At a time when the public school system in the United States is under attack, this debate has taken center stage in arguments about what accounts for differences in academic achievement. **Maximizing Intelligence** convincingly argues that, while both genetics and environment play a role in a child's intelligence, environmental factors, especially at an early age, are of primary importance. Working from this premise, **Armor** suggests how intelligence may be heightened. **Armor** presents four propositions about intelligence. His first is that intelligence exerts a major influence on educational and occupational success, following a chronological sequence, from a child's cognitive skills learned before school, to academic success during the school years, to eligibility for college. His second proposition is that intelligence can be changed, at least within limits. There is ample evidence that a child's intelligence is not fully given at birth, but continues to evolve and change at least through the early elementary school years, although at a declining rate. Proposition three is that intelligence is influenced by a series of "risk factors," and most of the influence occurs before a child reaches school age. Risk factors include parent intelligence and education, family income, family structure and size, nutrition, and specific parenting behaviors. The fourth proposition flows from the second and third--that the most promising avenues for maximizing intelligence come from a child's parents. **Armor** persuasively argues for a "whole family" approach whereby government programs are modified or created to inform parents of risk factors and to reward behaviors that optimize positive outcomes. **Maximizing Intelligence** is meticulously researched **Banking & SSC November 2019 eBook** [Jagran Prakashan Ltd.](#) **Jagranjosh's Banking & SSC e-book November 2019 eBook** is a one-stop solution to help students preparing for the upcoming RBI Grade B 2019, LIC Assistant 2019 and SSC CGL 2019-20 Exams.
