## THE INDUSTRIAL REVOLUTION

---

### THE STATE, KNOWLEDGE AND GLOBAL TRADE

---

**Bloomsbury Publishing** *The British Industrial Revolution has long been seen as the spark for modern, global industrialization and sustained economic growth. Indeed the origins of economic history, as a discipline, lie in 19th-century European and North American attempts to understand the foundation of this process. In this book, William J. Ashworth questions some of the orthodoxies concerning the history of the industrial revolution and offers a deep and detailed reassessment of the subject that focuses on the State and its role in the development of key British manufactures. In particular, he explores the role of State regulation and protectionism in nurturing Britain's negligible early manufacturing base. Taking a long view, from the mid 17th century through to the 19th century, the analysis weaves together a vast range of factors to provide one of the fullest analyses of the industrial revolution, and one that places it firmly within a global context, showing that the Industrial Revolution was merely a short moment within a much larger and longer global trajectory. This book is an important intervention in the debates surrounding modern industrial history will be essential reading for anyone interested in global and comparative economic history and the history of globalization.*

## **DOWNSCOPING**

---

---

### **HOW TO TAME THE DIVERSIFIED FIRM**

---

**Oxford University Press** *Large, diversified firms face unique challenges as they compete worldwide, and corporate restructuring is one way multinationals strive for competitive advantage. Weighing the pros and cons of a variety of approaches to restructuring, Downscoping offers executives a clear, strategic path through the maze. The authors show that when a multinational conglomerate fails to compete effectively, too much diversification may be the culprit. Whether the result of weak corporate governance or poor corporate strategy, over-diversification can make managers, unfamiliar with some of the markets in which they compete, opt for safety over innovation. This risk-aversion and lack of long-range commitment to innovation lead inevitably to stagnation over the longer term. The answer is not downsizing--closing offices and laying off personnel--but downscoping: a strategic approach to restructuring. The options include incentive and compensation adjustments for executives, leveraged buy-outs and capital structure changes, focusing on core skills, diversifying internationally while focusing on businesses in which a firm has strong competencies, and buying and selling mature businesses where product development is not a great concern. Regardless of the approach, executives must exercise strategic leadership during and after restructuring, including providing strategic direction, exploiting core competencies, developing human capital, and sustaining the corporate culture. Based on systematic research rather than casual observation, Downscoping provides a strong description of restructuring alternatives and their resulting tradeoffs. Its specific guidelines for maintaining competitiveness will be essential reading for managers involved in corporate restructuring.*
