INTERNATIONAL PERSPECTIVES ON MAPS AND THE INTERNET

Springer Science & Business Media The Internet has redefined how maps are used. No longer restricted to paper, maps are now transmitted almost instantly and delivered to the user in a fraction of the time required to distribute maps on paper. They are viewed in a more timely fashion. The Internet presents the map user with both a faster method of map distribution and different forms of mapping. This book provides an international perspective on this growing area of information dissemination.

KURAJ

Bloomsbury Publishing USA Born in the late 1930s on the Central Asian steppe, Naja is the daughter of a clan chieftain of the Tushan nomads, proud descendants of Genghis Khan. When her fiercely independent father, U'lan, hears of Stalin's plan to bring the Tushan under state control and make them settle permanently in collective farms, he pledges to join forces with the invading German army. It is a pledge of honor that will take her father to the hell of Stalingrad and change Naja's life forever by eventually bringing her, at the age of nine, to ruined postwar Cologne. From there she must learn to adapt to a strange new culture, and to the strange family that has taken her in. But as Naja gradually grows more comfortable in this alien world, the memories of her young life on the steppe call out to her. She begins a difficult search for her past-and the past of her people-with only the word kuraj (Tushan for tumbleweed) as her talisman and guide. Silvia di Natale was born in Genoa in 1951 and moved to Germany in 1973, where she lives with her husband and son. She teaches and works as an ethnosociologist. Kuraj is her first novel. "An extraordinary epic of emigration, capture, ruin, flight and return-a revelation."-Corriere della Sera "Extraordinary and gripping."-Repubblica

PROCEEDINGS, 2019, MAXENT 2019

MDPI This Proceedings book presents papers from the 39th International Workshop on Bayesian Inference and Maximum Entropy Methods in Science and Engineering, MaxEnt 2019. The workshop took place at the Max Planck Institute for Plasma Physics in Garching near Munich, Germany, from 30 June to 5 July 2019, and invited contributions on all aspects of probabilistic inference, including novel techniques, applications, and work that sheds new light on the foundations of inference. Addressed are inverse and uncertainty quantification (UQ) and problems arising from a large variety of applications, such as earth science, astrophysics, material and plasma science, imaging in geophysics and medicine, nondestructive testing, density estimation, remote sensing, Gaussian process (GP) regression, optimal experimental design, data assimilation, and data mining.

CONTINUUM MECHANICS AND APPLICATIONS IN GEOPHYSICS AND THE ENVIRONMENT

Springer Science & Business Media The topics covered include soil mechanics and porous media, glacier and ice dynamics, climatology and lake physics, climate change as well as numerical algorithms. The book, written by well-known experts, addresses researchers and students interested in physical aspects of our environment.

POLYMER GELS

FUNDAMENTALS AND BIOMEDICAL APPLICATIONS

Springer Science & Business Media This volume contains a series of papers originally presented at the Symposium on Polymer Gels organized and sponsored by the Research Group on Polymer Gels, The Society of Polymer Science of Japan and co-sponsored by the Science and Technology Agency (ST A) and MIT!, Japan. The Symposium took place at Tsukuba Science City on 18th and 19th September, 1989. Recognized experts in their fields were invited to speak and there was a strong attendance from government,

academic and industrial research centers. The purpose of the Symposium was to review the state of the art and to present and discuss recent progress in the understanding of the behavioral properties of polymer gels and their application to biomedical, environmental and robotic fields. Most of the papers and related discussions concentrated on the swelling behavior of hydrogels and chemomechanical systems, both artificial and naturally occurring, in which external stimuli of a physical or chemical nature control energy transformation or signal transduction. The recent great interest in chemomechanical systems based on polymer gels has stimulated considerable effort towards the development of new sensors and actuators, controllable membrane separation processes, and delivery systems in which the functions of sensing, processing and actuation are all built into the polymeric network device. Artificial chemomechanical systems, through the use of environmentally sensitive polymer gels, are emerging as interesting materials for mimicking basic processes previously only confined to the biological world, and commercially viable applications are also foreseen in the not-too-distant future.

ADVANCED DATA WAREHOUSE DESIGN

FROM CONVENTIONAL TO SPATIAL AND TEMPORAL APPLICATIONS

Springer Science & Business Media This exceptional work provides readers with an introduction to the state-of-the-art research on data warehouse design, with many references to more detailed sources. It offers a clear and a concise presentation of the major concepts and results in the subject area. Malinowski and Zimányi explain conventional data warehouse design in detail, and additionally address two innovative domains recently introduced to extend the capabilities of data warehouse systems: namely, the management of spatial and temporal information.

BIOTECHNOLOGY AND PRODUCTION OF ANTI-CANCER COMPOUNDS

Springer This book discusses cancers and the resurgence of public interest in plant-based and herbal drugs. It also describes ways of obtaining anti-cancer drugs from plants and improving their production using biotechnological techniques. It presents methods such as cell culture, shoot and root culture, hairy root culture, purification of plant raw materials, genetic engineering, optimization of culture conditions as well as metabolic engineering with examples of successes like taxol, shikonin, ingenol mebutate and podophylotoxin. In addition, it describes the applications and limitations of large-scale production of anti-cancer compounds using biotechnological means. Lastly, it discusses future economical and eco-friendly strategies for obtaining anti-cancer compounds using biotechnology.

UNIVERSITY PHYSICS

University Physics is designed for the two- or three-semester calculus-based physics course. The text has been developed to meet the scope and sequence of most university physics courses and provides a foundation for a career in mathematics, science, or engineering. The book provides an important opportunity for students to learn the core concepts of physics and understand how those concepts apply to their lives and to the world around them. Due to the comprehensive nature of the material, we are offering the book in three volumes for flexibility and efficiency. Coverage and Scope Our University Physics textbook adheres to the scope and sequence of most two- and three-semester physics courses nationwide. We have worked to make physics interesting and accessible to students while maintaining the mathematical rigor inherent in the subject. With this objective in mind, the content of this textbook has been developed and arranged to provide a logical progression from fundamental to more advanced concepts, building upon what students have already learned and emphasizing connections between topics and between theory and applications. The goal of each section is to enable students not just to recognize concepts, but to work with them in ways that will be useful in later courses and future careers. The organization and pedagogical features were developed and vetted with feedback from science educators dedicated to the project.

BIG DATA COMPUTING FOR GEOSPATIAL APPLICATIONS

MDPI The convergence of big data and geospatial computing has brought forth challenges and opportunities to Geographic Information Science with regard to geospatial data management, processing, analysis, modeling, and visualization. This book highlights recent advancements in integrating new computing approaches, spatial methods, and data management strategies to tackle geospatial big data challenges and meanwhile demonstrates opportunities for using big data for geospatial applications. Crucial to the advancements highlighted in this book is the integration of computational thinking and spatial thinking and the transformation of abstract ideas and models to concrete data structures and algorithms.

MATHEMATICAL REASONING

WRITING AND PROOF VERSION 2.0

Mathematical Reasoning: Writing and Proof is a text for the first college mathematics course that introduces students to the processes of constructing and writing proofs and focuses on the formal development of mathematics. The primary goals of the text are to help students: Develop logical thinking skills and to develop the ability to think more abstractly in a proof oriented setting; develop the ability to construct and write mathematical proofs using standard methods of mathematical proof including direct proofs, proof by contradiction, mathematical induction, case analysis, and counterexamples; develop the ability to read and understand written mathematical proofs; develop talents for creative thinking and problem solving; improve their quality of communication in mathematics. This includes improving writing techniques, reading comprehension, and oral communication in mathematics; better

understand the nature of mathematics and its language. Another important goal of this text is to provide students with material that will be needed for their further study of mathematics. Important features of the book include: Emphasis on writing in mathematics; instruction in the process of constructing proofs; emphasis on active learning. There are no changes in content between Version 2.0 and previous versions of the book. The only change is that the appendix with answers and hints for selected exercises now contains solutions and hints for more exercises.

STEALTH ASSESSMENT

MEASURING AND SUPPORTING LEARNING IN VIDEO GAMES

MIT Press An approach to performance-based assessments that embeds assessments in digital games in order to measure how students are progressing toward targeted goals. To succeed in today's interconnected and complex world, workers need to be able to think systemically, creatively, and critically. Equipping K-16 students with these twenty-first-century competencies requires new thinking not only about what should be taught in school but also about how to develop valid assessments to measure and support these competencies. In *Stealth Assessment*, Valerie Shute and Matthew Ventura investigate an approach that embeds performance-based assessments in digital games. They argue that using well-designed games as vehicles to assess and support learning will help combat students' growing disengagement from school, provide dynamic and ongoing measures of learning processes and outcomes, and offer students opportunities to apply such complex competencies as creativity, problem solving, persistence, and collaboration. Embedding assessments within games provides a way to monitor players' progress toward targeted competencies and to use that information to support learning. Shute and Ventura discuss problems with such traditional assessment methods as multiple-choice questions, review evidence relating to digital games and learning, and illustrate the stealth-assessment approach with a set of assessments they are developing and embedding in the digital game *Newton's Playground*. These stealth assessments are intended to measure levels of creativity, persistence, and conceptual understanding of Newtonian physics during game play. Finally, they consider future research directions related to stealth assessment in education.

INNOVATIVE ASSESSMENT FOR THE 21ST CENTURY

SUPPORTING EDUCATIONAL NEEDS

Springer Science & Business Media In today's rapidly changing and information-rich world, students are not acquiring adequate knowledge and skills to prepare them for careers in mathematics, science, and technology with the traditional approach to assessment and instruction. New competencies (e.g., information communication and technology skills) are needed to deal successfully with the deluge of data. In order to accomplish this, new "educationally valuable" skills must be acknowledged and assessed. Toward this end, the skills we value and support for a society producing knowledge workers, not simply service workers, must be identified, together with methods for their measurement. *Innovative Assessment for the 21st Century* explores the faces of future assessment—and ask hard questions, such as: What would an assessment that captures all of the above attributes look like? Should it be standardized? What is the role of the professional teacher?

AXIOMATIC GEOMETRY

American Mathematical Soc. The story of geometry is the story of mathematics itself: Euclidean geometry was the first branch of mathematics to be systematically studied and placed on a firm logical foundation, and it is the prototype for the axiomatic method that lies at the foundation of modern mathematics. It has been taught to students for more than two millennia as a mode of logical thought. This book tells the story of how the axiomatic method has progressed from Euclid's time to ours, as a way of understanding what mathematics is, how we read and evaluate mathematical arguments, and why mathematics has achieved the level of certainty it has. It is designed primarily for advanced undergraduates who plan to teach secondary school geometry, but it should also provide something of interest to anyone who wishes to understand geometry and the axiomatic method better. It introduces a modern, rigorous, axiomatic treatment of Euclidean and (to a lesser extent) non-Euclidean geometries, offering students ample opportunities to practice reading and writing proofs while at the same time developing most of the concrete geometric relationships that secondary teachers will need to know in the classroom. -- P. PORTRAIT OF MYSELF

Pickle Partners Publishing *This is the story of the internationally acclaimed American woman Margaret Bourke-White, who for over thirty years made photographic history: as the first photographer to see the artistic and storytelling possibilities in American industry, as the first to write social criticism with a lens, and as the most distinguished and venturesome foreign correspondent-with-a-camera to report wars, politics and social and political revolution on three continents. In this poignant autobiography, Bourke-White details her fight against Parkinson's disease, and recounts tales of her struggles to master her art and craft, of photographing Stalin, Gandhi and many other notables, of being torpedoed off North Africa while reporting World War II, of flying combat missions, of photographing the dread murder camps of Nazi Germany, of touring Tobacco Road to produce the book You Have Seen Their Faces with Erskine Caldwell (whom she later married), of adventures—and wonderful picture-taking—in the mines of South Africa, in the frozen North, in war-torn Korea. Illustrated throughout with over 70 of Margaret Bourke-White's fine photographs, this is the great life story of a great American, greatly yet modestly told.*

INTRODUCTION TO WEB MAPPING

CRC Press *A web map is an interactive display of geographic information, in the form of a web page, that you can use to tell stories and answer questions. Web maps have numerous advantages over traditional mapping techniques, such as the ability to display up-to-date or even real-time information, easy distribution to end users, and highly customized interactive content. Introduction to Web Mapping teaches you how to develop online interactive web maps and web mapping applications, using standard web technologies: HTML, CSS and JavaScript. The core technologies are introduced in Chapters 1-5, focusing on the specific aspects which are most relevant to web mapping. Chapters 6-13 then implement the material and demonstrate key concepts for building and publishing interactive web maps.*

THE STRUCTURE AND PROPERTIES OF WATER

Oxford University Press on Demand *The authors have correlated many experimental observations and theoretical discussions from the scientific literature on water. Topics covered include the water molecule and forces between water molecules; the thermodynamic properties of steam; the structures of the ices; the thermodynamic, electrical, spectroscopic, and transport properties of the ices and of liquid water; hydrogen bonding in ice and water; and models for liquid water. The main emphasis of the book is on relating the properties of ice and water to their structures. Some background material in physical chemistry has been included in order to ensure that the material is accessible to readers in fields such as biology, biochemistry, and geology, as well as to chemists and physicists.*

THE TEACHING OF PSYCHOLOGY

ESSAYS IN HONOR OF WILBERT J. MCKEACHIE AND CHARLES L. BREWER

Psychology Press *The Teaching of Psychology is centered around the masterful work of two champions of the teaching of psychology, Wilbert J. McKeachie and Charles L. Brewer, in order to recognize their seminal contributions to the teaching of the discipline. The book's main goal is to provide comprehensive coverage and analysis of the basic philosophies, current issues, and the basic skills related to effective teaching in psychology. It transcends the typical "nuts and bolts" type books and includes such topics as teaching at small colleges versus a major university, teaching and course portfolios, the scholarship of teaching, what to expect early in a teaching career, and lifelong learning. The Teaching of Psychology also features: Biographies of Bill McKeachie and Charles L. Brewer Fourteen chapters written by leading authorities in the teaching of psychology, which provide overviews of the latest psychological research and theories in effective college and university teaching. These chapters cover lecturing, classroom presence, using humor in*

teaching, pedagogy, advising, teaching critical thinking, writing, and technology, and training graduate students to teach Useful advice to new teachers and seasoned veterans, including qualities of master teachers, understanding the many facets of working within the academy, and teaching with technology Insights into teaching specific courses within the psychology curriculum, including the history of psychology, biological psychology, statistics and research methods, learning, social psychology, personality, psychology of women, cross-cultural psychology, industrial/organizational psychology, psychology of religion, and environmental psychology A closing section containing Bill McKeachie's and Charles L. Brewer's perspectives into the teaching of psychology and its history, highlights, and future. This book is intended for academic psychologists who teach and/or train graduate assistants to teach at the college and university level. All royalties from this book will be donated to the Society for the Teaching of Psychology (Division 2 of the American Psychological Association), which each year sponsors many activities across the country to promote the teaching of psychology.

PANDEX CURRENT INDEX TO SCIENTIFIC AND TECHNICAL LITERATURE

HANDBOOK OF NEURAL NETWORK SIGNAL PROCESSING

CRC Press The use of neural networks is permeating every area of signal processing. They can provide powerful means for solving many problems, especially in nonlinear, real-time, adaptive, and blind signal processing. The Handbook of Neural Network Signal Processing brings together applications that were previously scattered among various publications to provide an up-to-date, detailed treatment of the subject from an engineering point of view. The authors cover basic principles, modeling, algorithms, architectures, implementation procedures, and well-designed simulation examples of audio, video, speech, communication, geophysical, sonar, radar, medical, and many other signals. The subject of neural networks and their application to signal processing is constantly improving. You need a handy reference that will inform you of current applications in this new area. The Handbook of Neural Network Signal Processing provides this much needed service for all engineers and scientists in the field.

HANDBOOK ON PARALLEL AND DISTRIBUTED PROCESSING

Springer Science & Business Media Here, authors from academia and practice provide practitioners, scientists and graduates with basic methods and paradigms, as well as important issues and trends across the spectrum of parallel and distributed processing. In particular, they cover such fundamental topics as efficient parallel algorithms, languages for parallel processing, parallel operating systems, architecture of parallel and distributed systems, management of resources, tools for parallel computing, parallel database systems and multimedia object servers, as well as the relevant networking aspects. A chapter is dedicated to each of parallel and distributed scientific computing, high-performance computing in molecular sciences, and multimedia applications for parallel and distributed systems.

CIRCLES IN THE SKY

THE LIFE AND TIMES OF GEORGE FERRIS

Amer Society of Civil Engineers In the summer of 1893, at the Columbian Exposition in Chicago, an engineering marvel was unveiled and immediately captured the world's attention. It was a towering, web-like giant wheel, standing upright and rotating high above the city. Several stories taller than any existing American building, the Ferris Wheel carried adventure-seeking passengers to the dizzying height of 264 feet and provided panoramic views never before possible. George W. G. Ferris Jr. and his wheel helped usher America eager to identify itself with ingenuity, entrepreneurialism, and innovation into the 20th century. Yet the very wheel that came to define George Ferris in the end consumed him, leaving him ruined. This book is the first full-length biography of George Ferris. He was a civil engineer, an inventor, and a pioneer for his development of structural steel in bridge building. Circles in the Sky chronicles the life of the man responsible for creating, designing, and building the Ferris Wheel, the only structure of its time to rival the Eiffel Tower. It is, at the same time, the story of the Ferris clan, one of the nation's oldest and most fascinating families. The London Eye, erected in 1999 to welcome the new millennium, the Star of Nanchang, and most recently, the Singapore Flyer, have revived our love affair with Ferris wheels. Circles in the Sky will enchant anyone interested in engineering marvels, history, and the Ferris wheel, which reminds us that America was built by dreamers and innovators such as George W. G. Ferris Jr. About the Author Richard G. Weingardt, P.E., Dist.M.ASCE, is a practicing structural engineer with nearly 50 years of experience. He is also a sought-after motivational speaker and an accomplished author of books and articles, including Engineering Legends: Great American Civil Engineers (ASCE Press, 2005) and regular columns in Structural Engineer and ASCE's Journal of Leadership and Management in Engineering.

She is set aside for a political marriage when Harold becomes king in 1066. Determined to protect her children's destinies and control her economic future, she is taken to William's camp when her estate is sacked on the eve of the Battle of Hastings. She later identifies Harold's body on the battlefield and her youngest son becomes a Norman hostage. Elditha avoids an arranged marriage with a Breton knight by which her son might or might not be given into his care. She makes her own choice and sets out through strife-torn England to seek help from her sons in Dublin. However, events again overtake her. Harold's mother, Gytha, holds up in her city of Exeter with other aristocratic women, including Elditha's eldest daughter. The girl is at risk, drawing Elditha back to Exeter and resistance. Initially supported by Exeter's burghers the women withstand William's siege. However, after three horrific weeks they negotiate exile and the removal of their treasure. Elditha takes sanctuary in a convent where eventually she is reunited with her hostage son. Love the novels of Carol McGrath? Don't miss *THE SILKEN ROSE*, starring one of the most fierce and courageous forgotten queens of England! **AND COMING IN APRIL 2022: DISCOVER THE STONE ROSE: THE SUMPTUOUS AND GRIPPING NEW NOVEL FROM CAROL McGRATH AVAILABLE FOR PREORDER NOW!**
