Environmental Protest in Western Europe OUP Oxford The rise of environmentalism has been one of the more remarkable developments in the politics of western societies in recent decades. However, as environmental awareness has become more generalized, the forms of expression of environmental concern have changed. Established environmental movement organizations have become embedded in policy networks, but, in some countries, there has been a resurgence of environmental radicalism. New groups, adopting innovative tactics, have mounted spectacular and disruptive protests. These developments pose interesting questions for social scientists and policy-makers. Has the institutionalization of established environmental organizations demobilized their supporters and reduced them to a passive, credit-card waving 'conscience' constituency? Has direct participation in environmental protest become the specialized activity of smaller numbers of people? Has there been a decline in the total volume of environmental protest, or is it merely that the forms of protest have changed? Have the protest repertoires of established groups moderated over time, or have they been stimulated by the emergence of more radical groups to adopt more challenging tactics? Has environmental protest become more confrontational? Do protests employ different repertoires of action according to the issues at stake? How does the incidence of protest vary over time and from one country to another? Is there evidence of a Europeanization of either the issues or the forms of environmental protest? These are some of the questions this volume addresses. Based upon an analysis of the protest events reported in one quality newspaper in each of eight countries during the ten years 1988 to 1997, this is the first systematically comparative study of environmental protest in a representative cross-section of EU member states. It breaks entirely new ground in the study of environmental politics in Europe and is a major contribution to the study of protest events. **Knowing Nature, Knowing Science An Ethnography of Environmental Activism** This text focuses on three different groups of civil activists protesting against infrastructure installations, and on their understanding of science. The role of science is revealed as an ambivalent one for environmental activism, and it is also shown to pose problems for anthropology: in looking at environmental activism as a social commitment, meaningful commentary must combine both social and scientific perspectives. **Cyberprotest Environmental Activism Online** Manchester University Press Cyberprotest is an exploration of contemporary radical internet activism in Britain. It investigates the context, tensions and outcomes of environmentalists' use of the internet. Examining a wide variety of groups—from radical direct action protesters to the political lobbying of Friends of the Earth—it allows activists to speak of their experiences, challenges and innovations, providing a unique insight into the workings of frontline activism. Internet use in all levels of activism—from long-running campaigns to short-term intense tactics—is analysed in the quest to determine the value of this much-hyped technology. The book documents the negotiations and achievements of environmentalists both in dealing with the tensions of using environmentally damaging technology and in avoiding surveillance and counter-strategies. It also examines how they use the internet in a participatory manner, to aid mobilisation and to add to their tactical repertoire. It reflects upon the implications of these uses for political campaigning and identifies emerging trends in the forms and processes of the environmental movement. This book will appeal to those interested in politics and the environment or who have a concern for the politics of the internet and activism. **Greening Brazil Environmental Activism in State and Society** Duke University Press Books DIVAuthoritative work on the complex history of modern Brazilian environmental policy and its relation to both transnational politics and domestic democratization processes./div **Environmental Philosophy and Environmental Activism** Rowman & Littlefield This collection of new essays by eleven distinguished environmental philosophers addresses two main questions: first, whether environmental philosophy and ethics should be seen as a form of applied philosophy or as something else, perhaps best called practical philosophy; and second, how environmental philosophy is practiced in human life, especially in the lives of academics. **The Complete Guide to Environmental Careers in the 21st Century** Island Press Provides an analysis of environmental career fields and offers advice on job hunting UGC NET Environmental Studies Paper II Chapter Wise Notebook | Complete Preparation Guide EduGorilla Community Pvt. This all-encompassing collection of information about consumer activism and the consumer movement will provide students, public officials, business groups, and other activists with a one-stop source of facts and insights. The contributors explore hundreds of major consumer protections that have significantly enhanced the quality of life and safety for all Americans, showing how these protections were won through the skillful and determined work of leading activists and activist organizations. Many of the stories told here are related by the activists themselves, often for the first time. More than 140 entries offer a comprehensive treatment of the consumer activism of specific organizations, their leaders, and strategies. The book also includes more than 40 entries about consumer movements in Europe, Asia, Africa, and Latin America. A timeline of key events and a listing of the most important books on the subject of consumer activism help provide context for the individual entries as do two introductory essays. Cross references in each entry establish linkages among topics. • Provides the single most comprehensive source available of information about consumer activism and advocacy • Shows how activism has influenced laws and regulations affecting more than 40 consumer issues • Shares personal accounts from activists about their work on these issues • Details information on U.S. national consumer organizations and many state and local consumer groups, including their goals, strategies, leaders, finances, and impact • Offers insights into the ways consumer activist groups have interacted with other nonprofits, policymakers, regulators, and business groups **A Citizen's Guide to Grassroots Campaigns** Rutgers University Press “Jan's book shows the vitality of the civil society in both cities and suburbs in New Jersey. It is the first book to demonstrate the strength of the civil society in both cities and suburbs in our state. Civic leaders in cities and suburbs should read the book to find plenty of insights and solid organizing advice to help them to mobilize their communities for change.”—Ira Resnick, Neighborhood Leadership Initiative Community Foundation of New Jersey Civic movements are essential to Americans' freedom and quality of life. Active citizens have led the way from the American Revolution to urban renewal. But fiery emotions and good intentions without skillful organization can lead to frustrated civic involvement. How can individual concerns be transformed into effective community action? Jan Barry provides a pragmatic, common-sense handbook to civic action. Using case studies from his home state of New Jersey, Barry has crafted what he calls a “guidebook for creative improvement on the American dream.” He dissects civic actions such as environmental campaigns, mutual-help groups, neighborhood improvement projects, and a grassroots peace mission to Russia. Looking for patterns to explain successes and failures, Barry includes his own experiences as a Vietnam veteran peace activist to inspire and coach fledgling activists. The result is a wealth of practical, non-partisan information on membership recruitment, organizational skills, public speaking, lobbying, publicity, conflict resolution, and more. Rising above any particular political, social, or religious beliefs, Barry shows would-be activists how to confront one enduring truth —“Democracy is a lot harder to do than it is to talk about or fight over.” **Religious Environmental Activism in Asia** Case Studies in Spiritual Ecology MDPI Throughout the world religious organizations are exploring and implementing into action ideas about the relevance of religion and spirituality in dealing with a growing multitude of environmental issues and problems. Religion and spirituality have the potential to be extremely influential for the better at many levels and in many ways through their intellectual, emotional, and activist components. This collection focuses on providing a set of captivating essays on the specifics of concrete cases of environmental activism involving most of the main Asian religions from several countries. Particular case studies are drawn from the religions of Animism, Buddhism, Daoism, Hinduism, Islam, and Jainism. They are from the countries of Bhutan, China, India, Indonesia, and Thailand. Thereby this set of case studies offers a very substantial and rich sampling of religious environmental activism in Asia. They are grounded in years of original field research on the subjects covered. Collectively these case studies reveal a fascinating and significant movement of environmental initiatives in engaged practical spiritual ecology in Asia. Accordingly, this collection should be of special interest to a diversity of scientists, academics, instructors, and students as well as communities and leaders from a wide variety of religions, environmentalism, and conservation. **Routledge Handbook of the Environment in Southeast Asia** Taylor & Francis The environment is one of the defining issues of our times, and it is closely linked to questions and dilemmas surrounding economic development. Southeast Asia is one of the world's most economically and demographically dynamic regions, and it is also one in which a host of environmental issues raise themselves. The Routledge Handbook of the Environment in Southeast Asia is a collection of 30 chapters dealing with the most significant scholarly debates in this rapidly growing field of study. Structured in four main parts, it gives a comprehensive regional overview of, and insight into, the environment in Southeast Asia. Wide-ranging and balanced, this handbook promotes scholarly understanding of how environmental issues are dealt with from diverse theoretical perspectives. It offers a detailed empirical understanding of the myriad environmental problems and challenges faced in Southeast Asia. This is the first publication of its kind in this field; a helpful companion for a global audience and for scholars of Southeast Asian studies from a variety of disciplines. **Environmental Justice in a Moment of Danger** University of California Press “Let this book immerse you in the many worlds of environmental justice.”—Naomi Klein We are living in a precarious environmental and political moment. In the United States and in the world, environmental injustices have manifested across racial and class divides in devastatingly disproportionate ways. What does this moment of danger mean for the environment and for justice? What can we learn from environmental justice struggles? **Environmental Justice in a Moment of Danger** examines mobilizations and movements, from protests at Standing Rock to activism in Puerto Rico in the wake of Hurricane Maria. Environmental justice movements fight, survive, love, and create in the face of violence that challenges the conditions of life itself. Exploring dispossession, deregulation, privatization, and inequality, this book is the essential primer on environmental justice, packed with cautiously hopeful stories for the future. **Encyclopedia of Religion and Nature** A&C Black The Encyclopedia of Religion and Nature, originally published in 2005, is a landmark work in the burgeoning field of religion and nature. It covers a vast and interdisciplinary

range of material, from thinkers to religious traditions and beyond, with clarity and style. Widely praised by reviewers and the recipient of two reference work awards since its publication (see www.religionandnature.com/ern), this new, more affordable version is a must-have book for anyone interested in the manifold and fascinating links between religion and nature, in all their many senses. A Question and Answer Guide to Astronomy Cambridge University Press Contains 250 questions and answers about astronomy, particular for the amateur astronomer. Insider's Guide to Environmental Negotiation CRC Press A one-of-a-kind book that provides winning strategies from both corporate and environmentalist points of view Insider's Guide to Environmental Negotiation reflects the author's more than 10 years of experience in environmental negotiation and reveals secrets previously known only to insiders familiar with what is needed to win in this volatile arena. The book provides critical insight into the negotiation process, both formal and informal, private and public. It also offers valuable tips on techniques, such as using the media to your best advantage and developing effective strategies. This practical, easy-to-read book is invaluable for industry personnel, environmental groups, expert witnesses, government officials, lawyers, lobbyists, consultants, politicians, and anyone else involved in the difficult art of environmental negotiation. Activist Training in the Academy Developing a Master's Program in Environmental Advocacy and Organizing at Antioch New England Graduate School This curriculum action research study begins by raising the question of whether environmental studies programs within higher education should launch activist training programs for public interest advocates and grassroots organizers working for nonprofit organizations focused on environmental protection, corporate accountability, and social justice. Answering that question in the affirmative, the study then focuses on the theoretical issues underlying the creation of activist training programs within the academy, specifically within environmental studies programs, and reports on a case study of the successful development of a master's program in Environmental Advocacy and Organizing. The first section on theoretical issues focuses first on the author's own evolution from a teacher focused primarily on critical pedagogy and citizenship education to one focused on expanding the activist training opportunities at his own graduate school and beyond. It goes on to make both the theoretical and historical case for activist training programs within higher education, including offering past examples from extension, service learning, and professional graduate programs. In the last part of this section, the study identifies 5 core curriculum content areas that are key to teaching environmental advocacy and organizing and then discusses the tradition of popular education as the most appropriate educational methodology for activist training programs. The second section reports on the case study of an insider action research project to develop and launch a new master's program in Environmental Advocacy and Organizing. This section presents the author's original proposal to the Faculty of the Department of Environmental Studies at Antioch New England Graduate School, explores their initial reactions, offers answers to key questions raised by the them, and, finally, describes the basic curricular design of the new program that welcomed its first cohort of students in Fall 2002 and has been directed by the author ever since. The aim of this study is to provide a useful guide for other educators in academia who might be interested in starting similar programs at their own schools, whether in the field of environmental studies or other disciplines. Green Spirituality One Answer to Global Environmental Problems and World Poverty The urge to live in harmony with Nature has never been stronger, yet humanity's onslaught on the Planet reaches new levels every decade. In Green Spirituality we visit India's wisest souls in search of the root causes of man's destructiveness toward Nature. We tell the stories of how our spiritual traditions have sought to provide the wisdom to guide us. For practical answers our pilgrimage moves from India to the pioneering eco-village communities of which many members have their own spiritual practices. For Chris Philpott, green educator activist with 28 years in Agenda 21, Transition Towns, Campaign against Climate Change, Green Spirituality and Inter-faith, this book is a lifework. It has taken him 13 years to research and write. He felt honoured with the Foreword from Dr Vandana Shiva, the international speaker, author and environmental activist. Find inside: --succinct accounts of the hazards facing our Planet; --how our distorted values play out in world impoverishment; --how pollution migrates to poor countries; --profound wisdom and abundant inspiration in the stories behind the main world spiritual traditions. Easily understood presentation enables the reader to make positive and informed choices helped by practical hints and websites. Includes wise words from over 100 spiritual leaders the author interviewed throughout India in 2002. Explores the dreams that inspire eco-village communities, living examples striving towards sustainability. "Sustainability is as much a spiritual imperative as it is a political and economic challenge. Chris Philpott admirably highlights this dimension in his book Green Spirituality." Satish Kumar, founder of Resurgence Magazine, author of Earth Pilgrim, 2009. "Chris Philpott's book will provide a unique insight into the spiritual changes we will have to make if society is to survive the global warming threat. I highly recommend him." Mark Lynas, author of the acclaimed Six Degrees, 2008. Apocalypse Never Why Environmental Alarmism Hurts Us All HarperCollins Now a National Bestseller! Climate change is real but it's not the end of the world. It is not even our most serious environmental problem. Michael Shellenberger has been fighting for a greener planet for decades. He helped save the world's last unprotected redwoods. He co-created the predecessor to today's Green New Deal. And he led a successful effort by climate scientists and activists to keep nuclear plants operating, preventing a spike of emissions. But in 2019, as some claimed "billions of people are going to die," contributing to rising anxiety, including among adolescents, Shellenberger decided that, as a lifelong environmental activist, leading energy expert, and father of a teenage daughter, he needed to speak out to separate science from fiction. Despite decades of news media attention, many remain ignorant of basic facts. Carbon emissions peaked and have been declining in most developed nations for over a decade. Deaths from extreme weather, even in poor nations, declined 80 percent over the last four decades. And the risk of Earth warming to very high temperatures is increasingly unlikely thanks to slowing population growth and abundant natural gas. Curiously, the people who are the most alarmist about the problems also tend to oppose the obvious solutions. What's really behind the rise of apocalyptic environmentalism? There are powerful financial interests. There are desires for status and power. But most of all there is a desire among supposedly secular people for transcendence. This spiritual impulse can be natural and healthy. But in preaching fear without love, and guilt without redemption, the new religion is failing to satisfy our deepest psychological and existential needs. Uncertain Hazards Environmental Activists and Scientific Proof On the other hand, the conviction of activists that industrial pollutants threaten their health results from the environmental movement's success in promoting new ideas about nature." "Tesh points to ways that environmentalist ideas have begun to affect science, thus making more likely the discovery of links between exposure to industrial pollutants and a community's health problems."--BOOK JACKET. The "climate generation"—late millennials and iGen, or Generation Z—is demanding that policy makers and government leaders take immediate action to address the dire outcomes predicted by climate science. Those inheriting our planet's environmental problems expect to encounter challenges, but they may not have the skills to grapple with the feelings of powerlessness and despair that may arise when they confront this seemingly intractable situation. Drawing on a decade of experience leading and teaching in college environmental studies programs, Sarah Jaquette Ray has created an "existential tool kit" for the climate generation. Combining insights from psychology, sociology, social movements, mindfulness, and the environmental humanities, Ray explains why and how we need to let go of eco-guilt, resist burnout, and cultivate resilience while advocating for climate justice. *A Field Guide to Climate Anxiety* is the essential guidebook for the climate generation—and perhaps the rest of us—as we confront the greatest environmental threat of our time. *A Guide for Using Hoot in the Classroom* Teacher Created Resources Teaching literature unit based on the popular children's story, *Hoot*. According to this view, medical practices are incidental to people's transformation from patients to patient activists. *The Biopolitics of Breast Cancer* turns this understanding upside down. Maren Klawiter analyzes the evolution of the breast cancer movement to show the broad social impact of how diseases come to be medically managed and publicly administered. Examining surgical procedures, adjuvant therapies, early detection campaigns, and the rise in discourses of risk, Klawiter demonstrates that these practices created a change in the social relations—if not the mortality rate—of breast cancer that initially inhibited, but later enabled, collective action. Her research focuses on the emergence and development of new forms of activism that range from grassroots patient empowerment to environmental activism and corporate-funded breast cancer awareness. *The Biopolitics of Breast Cancer* opens a window onto a larger set of changes currently transforming medically advanced societies and ultimately challenges our understanding of the origins, politics, and future of the breast cancer movement. Maren Klawiter holds a PhD in sociology from the University of California, Berkeley. She is currently pursuing a law degree at Yale University. *Internet for Activists A Hands-on Guide to Internet Tactics* Field-tested in the Fight Against Building El Toro Airport iUniverse *Internet for Activists* is a how-to-do-it guide to using websites and e-mail in grass roots politics. Leonard Kranser's unique book blends essential technical knowledge with lots of political and media savvy. The result is a practical handbook in layman's language for those who are not computer experts. It is easy reading, filled with interesting real-world examples. Kranser shares what he learned field-testing Internet tactics in a successful six-year campaign to rally public opposition to his county government's multi-billion dollar El Toro airport plan. He writes for those who may need to carry on similar efforts "with hard work, clever tactics, and a miniscule budget." In the words of one reviewer who closely followed the battle, this is a hands-on guide to "campaign tools that can be accessed by ordinary citizens to achieve goals of breathtaking scale." Kranser's El Toro Info website won an Award of Excellence for Internet and On Line Marketing from the Public Relations Society of America. *Earthforce! An Earth Warrior's Guide to Strategy* 3rd Edition The war to save the eco-systems and the biodiversity of the Earth is history's most important struggle. It is also a war by humans to protect the Earth from humanity...from ourselves. This struggle, unique and profound, requires an equally profound and unique guide to strategy. This book answers this need. Captain Watson draws on the genius of Sun Tzu, the discipline of Miyamoto Musashi, the perception of Marshall McLuhan, and his own field experiences to present an effective strategical guide for any serious student of environmental or conservation activism. This is the 3rd updated edition of the book.
