In the century since, it has evolved into the world's most popular intellectual pastime: a unique form of wordplay, the codes and conventions of which are open to anyone masochistic enough to get addicted. In *Two Girls, One on Each Knee*, Alan Connor celebrates the wit, ingenuity and frustration of setting and solving puzzles. From the beaches of D-Day to the imaginary worlds of three-dimensional puzzles, to the British school teachers and journalists who turned the form into the fiendish sport it is today, encompassing the most challenging clues, particular tricks, the world's greatest setters and famous solvers, PG Wodehouse and the torturers of the Spanish Inquisition, this is an ingenious book for lovers of this very particular form of wordplay. Note: The book begins with a puzzle in a standard 15-by-15 grid which incorporates all the basic clue types. The answers are also the chapter titles. Alan Connor writes twice-weekly about crosswords for the Guardian. He has contributed

pieces about language for the BBC and the Guardian and works in radio and television, writing for Charlie Brooker, Caitlin Moran and Sue Perkins. His most recent writing was *A Young Doctor's Notebook*, a TV adaptation of Mikhail Bulgakov stories starring Daniel Radcliffe and Jon Hamm. **The Nation East European Accessions List Rapanui Tradition and Survival on Easter Island The Bookseller So You Think You're Smart 150 Fun and Challenging Brain Teasers** International Puzzle Feature *So You Think You're Smart* is an eclectic collection of word games, riddles and logic puzzles to tantalize, tease and boggle the brains of readers of all ages and educational levels. The brain teasers are about ordinary words and things that everybody knows about so only common sense and a bit of resourcefulness are needed to solve them. The book is in its 17th printing and has appeared on Saturday Night Live. **BRS Bulletin East European Accessions List The English Catalogue of Books** Vols. for 1898-1968 include a directory of publishers. **Managerial Innovations of John Diebold An Analysis of Their Content and Dissemination The Weekly Review In Search of the Physical Basis of Life** Springer It is highly probable that the ability to distinguish between living and nonliving objects was already well developed in early prehuman animals. Cognizance of the difference between these two classes of objects, long a part of human knowledge, led naturally to the division of science into two categories: physics and chemistry on the one hand and biology on the other. So deep was this belief in the separateness of physics and biology that, as late as the early nineteenth century, many biologists still believed in vitalism, according to which living phenomena fall outside the confines of the laws of physics. It was not until the middle of the nineteenth century that Carl Ludwig, Hermann von Helmholtz, Emil DuBois-Reymond, and Ernst von Briicke inaugurated a physicochemical approach to physiology in which it was recognized clearly that one set of laws must govern the properties and behavior of all matter, living and nonliving . . . The task of a biologist is like trying to solve a gigantic multidimensional crossword fill in the right physical concepts at the right places. The biologist depends on puzzle: to the maturation of the science of physics much as the crossword solver depends on a large and correct vocabulary. The solver of crossword puzzles needs not just a good vocabulary but a special vocabulary. Words like inee and oke are vitally useful to him but are not part of the vocabulary of an English professor.
