PRINCIPLES OF ECONOMICS 2E

THE SOCIAL EPISTEMOLOGY OF EXPERIMENTAL ECONOMICS

Routledge Any experimental field consists of preparing special conditions for examining interesting objects for research. So naturally, the particular ways in which scientists prepare their objects determine the kind and the content of knowledge produced. This book provides a framework for the analysis of experimental practices - the Social Epistemology of Experiment - that incorporates both the 'material' and the 'social' dimensions of knowledge production. The Social Epistemology of Experiment is applied to experimental economics and in so doing, it introduces the epistemic role of the participation of human subjects in experiments and the causal efficacy of institutions in constraining and enabling human behaviour. It also develops the role of the social and socially established practices in overcoming the methodological difficulties associated with experimenting with humans subjects in the social sciences as well as the effect of scientists' interventions in the laboratory worlds. This book provides an historical and contextualized account of the emergence of experimental economics, the methodological discussions that have informed and constituted it, its main research programmes, and stylized facts. The analysis of its three main research programmes - market experiments, game theory experiments and individual decision-making experiments - shows how economics experiments are particularly tailored to produce knowledge about market institutions and individual behaviour in contexts where there might be conflicts of individual and social goals, and also about the processes of individual decision-making.

ECONOMICS

Cengage Learning The economy is tough -- but understanding economics doesn't have to be. In fact, opening up the world of economics can be exciting with Arnold's popular ECONOMICS, 14E. You see how economic forces impact daily events and form an important part of life 24/7. Current, everyday economic examples, updated learning features and engaging discussions illustrate the many unexpected places economics can occur. You learn how supply and demand play out on a freeway, what money is and isn't, how a person pays for good weather, why some countries are rich while others are poor and even why U-Haul rates are higher from New York to Texas than from Texas to New York. Three new chapters examine economic research, health economics and forces like creative destruction and crony capitalism. Revised coverage of the Federal Reserve System reviews changes in monetary policy. With ECONOMICS, 14e, you gain the economic tools, new thinking and theories to help you better understand the world around you. BEHAVIOURAL ECONOMICS AND FINANCE

Routledge Standard models in economics and finance usually assume that people are rational, self-interested maximisers, effectively co-ordinated via the invisible hand of the price mechanism. Whilst these approaches produce tractable, simple models, they cannot fully capture the uncertainties and instabilities that affect everyday choices in today's complex world. Insights from the other social and behavioural sciences can help to fill the gap and behavioural economics is the subject which brings economics and finance together with psychology, neuroscience and sociology. Behavioural Economics and Finance introduces the reader to some of the key concepts and insights from this rich, inter-disciplinary approach to real-world decision-making.

AN INTRODUCTION TO THE ECONOMICS OF INFORMATION

INCENTIVES AND CONTRACTS

Oxford University Press on Demand In this revised second edition, An Introduction to the Economics of Information covers the consequences for the character and efficiency of the interaction between individuals and organizations when one party has more or better information on some aspect of the relationship. This is the condition of asymmetric information, under which the information gap will be exploited if, by doing so, the better-informed party can achieve some advantage. The book is written for a one-semester course for advanced undergraduates taking specialized course options, and for first-year postgraduate students of economics or business. After an introduction to the subject and the presentation of a benchmark model in which both parties share the same information throughout the relationship, chapters are devoted to the three main asymmetric information topics of Moral Hazard, Adverse Selection, and Signalling. The wide range of economic situations where the conclusions are applied includes such areas as finance, regulation, insurance, labour economics, health economics, and even politics. Each chapter presents the basic theory before moving on to applications and advanced topics. The problems are presented in the same framework throughout to allow easy comparison of the different results. This new edition incorporates extended exercises to test the student's understanding of the material, and to develop the tools and skills provided by the main text to solve other, original problems.
