Strengthening Forensic Science in the United States

A Path Forward

National Academies Press Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

An Engine, Not a Camera

How Financial Models Shape Markets

MIT Press In *An Engine, Not a Camera*, Donald MacKenzie argues that the emergence of modern economic theories of finance affected financial markets in fundamental ways. These new, Nobel Prize-winning theories, based on elegant mathematical models of markets, were not simply external analyses but intrinsic parts of economic processes. Paraphrasing Milton Friedman, MacKenzie says that economic models are an engine of inquiry rather than a camera to reproduce empirical facts. More than that, the emergence of an authoritative theory of financial markets altered those markets fundamentally. For example, in 1970, there was almost no trading in financial derivatives such as "futures." By June of 2004, derivatives contracts totaling \$273 trillion were outstanding worldwide. MacKenzie suggests that this growth could never have happened without the development of theories that gave derivatives legitimacy and explained their complexities. MacKenzie examines the role played by finance theory in the two most serious crises to hit the world's financial markets in recent years: the stock market crash of 1987 and the market turmoil that engulfed the hedge fund Long-Term Capital Management in 1998. He also looks at finance theory that is somewhat beyond the mainstream—chaos theorist Benoit Mandelbrot's model of "wild" randomness. MacKenzie's pioneering work in the social studies of finance will interest anyone who wants to understand how America's financial markets have grown into their current form.

Pre-Incident Indicators of Terrorist Incidents

The Identification of Behavioral, Geographic and Temporal Patterns of Preparatory Conduct

DIANE Publishing This is a print on demand edition of a hard to find publication. Explores whether sufficient data exists to examine the temporal and spatial relationships that existed in terrorist group planning, and if so, could patterns of preparatory conduct be identified? About one-half of the terrorists resided, planned, and prepared for terrorism relatively close to their eventual target. The terrorist groups existed for 1,205 days from the first planning meeting to the date of the actual/planned terrorist incident. The planning process for specific acts began 2-3 months prior to the terrorist incident. This study examined selected terrorist groups/incidents in the U.S. from 1980-2002. It provides for the potential to identify patterns of conduct that might lead to intervention prior to the commission of the actual terrorist incidents. Illustrations.

Parentology

Everything You Wanted to Know about the Science of Raising Children but Were Too Exhausted to Ask

Simon and Schuster An award-winning scientist offers his unorthodox approach to childrearing: "Parentology is brilliant, jaw-droppingly funny, and full of wisdom...bound to change your thinking about parenting and its conventions" (Amy Chua, author of *Battle Hymn of the Tiger Mother*). If you're like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on timeworn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research to make the big decisions. In *Parentology*, Conley hilariously reports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are very loving, and the outcomes are redemptive—even when Conley's sassy kids show him the limits of his profession. *Parentology* teaches you everything you need to know about the latest literature on parenting—with lessons that go down easy. You'll be laughing and learning at the same time.

The Financial Crisis Inquiry Report

The Final Report of the National Commission on the Causes of the Financial and Economic Crisis in the United States Including Dissenting Views

Cosimo, Inc. The Financial Crisis Inquiry Report, published by the U.S. Government and the Financial Crisis Inquiry Commission in early 2011, is the official government report on the United States financial collapse and the review of major financial institutions that bankrupted and failed, or would have without help from the government. The commission and the report were implemented after Congress passed an act in 2009 to review and prevent fraudulent activity. The report details, among other things, the periods before, during, and after the crisis, what led up to it, and analyses of subprime mortgage lending, credit expansion and banking policies, the collapse of companies like Fannie Mae and Freddie Mac, and the federal bailouts of Lehman and AIG. It also discusses the aftermath of the fallout and our current state. This report should be of interest to anyone concerned about the financial situation in the U.S. and around the world. THE FINANCIAL CRISIS INQUIRY COMMISSION is an independent, bi-partisan, government-appointed panel of 10 people that was created to "examine the causes, domestic and global, of the current financial and economic crisis in the United States." It was established as part of the Fraud Enforcement and Recovery Act of 2009. The commission consisted of private citizens with expertise in economics and finance, banking, housing, market regulation, and consumer protection. They examined and reported on "the collapse of major financial institutions that failed or would have failed if not for exceptional assistance from the government." News Dissector DANNY SCHECHTER is a journalist, blogger and filmmaker. He has been reporting on economic crises since the 1980's when he was with ABC News. His film In Debt We Trust warned of the economic meltdown in 2006. More Brilliant Than the Sun

The classic work on the music of Afrofuturism, from jazz to jungle *More Brilliant than the Sun: Adventures in Sonic Fiction* is one of the most extraordinary books on music ever written. Part manifesto for a militant posthumanism, part journey through the unacknowledged traditions of diasporic science fiction, this book finds the future shock in Afrofuturist sounds from jazz, dub and techno to funk, hip hop and jungle. By exploring the music of such musical luminaries as Sun Ra, Alice Coltrane, Lee Perry, Dr Octagon, Parliament and Underground Resistance, theorist and artist Kodwo Eshun mobilises their concepts in order to open the possibilities of sonic fiction: the hitherto unexplored intersections between science fiction and organised sound. Situated between electronic music history, media theory, science fiction and Afrodiasporic studies, *More Brilliant than the Sun* is one of the key works to stake a claim for the generative possibilities of Afrofuturism. Much referenced since its original publication in 1998, but long unavailable, this new edition includes an introduction by Kodwo Eshun as well as texts by filmmaker John Akomfrah and producer Steve Goodman aka kode9.

Alpha Boys School

Cradle of Jamaican Music

Facing a life of poverty, neglect, abandonment and even homelessness, young Jamaican boys are placed in a disciplinarian Catholic boarding school. With a rigorous musical training program overseen by an eccentric jazz-loving nun, the young virtuoso graduates of Alpha Boys' School went on to change the shape of music forever. It's the 1950s in Jamaica and a musical revolution is brewing. People all over Kingston dance nightly to vast outdoor sound systems blasting American rhythm and blues records across the shanty towns. In the hotels and theaters big bands are playing jazz and calypso. Street musicians are playing home-grown folk music called mento. Out of this musical stew, Jamaica will soon birth a dance music all of its own, a sound that will conquer the globe. Starting with ska in the early 1960s, followed by rocksteady, eventually arriving at reggae in 1969, a group of virtuoso graduates of a Roman Catholic boarding school spearhead a musical and cultural revolution that still reverberates around the world over half a century later. The Sisters of Mercy nuns at Alpha provided a home alongside industrial trades apprenticeships and religious indoctrination. One in particular, Sister Mary Ignatius, dedicated 64 years of her life to running the school's music program. Her deep appreciation of jazz and her sense of fun endeared her to the boys in the band, inspiring them to attain greatness. From early Jamaican jazz giants like Joe Harriott and Dizzy Reece to the greatest ska band of all time, The Skatalites, and some of reggae's most inspirational artists such as Cedric Brooks, Johnny Osbourne, Leroy Smart and Yellowman, the Alpha story is the untold history of Jamaican music. Join Heather Augustyn and Adam Reeves as they delve into the history of this remarkable institution and reveal the life and works of 47 of the greatest Alpha boys. The culmination of many combined years of work, using musicians' personal recollections and a wealth of rarely seen photographs, *Alpha Boys' School: Cradle of Jamaican Music* will take you to the heart of the Jamaica music story. Whether you are a lover of original ska and rocksteady, roots, dub, dancehall and beyond, these stories will take you deeper into the music. If you enjoyed *Solid Foundation: An Oral History of Reggae* by David Katz, *Bass Culture* by Lloyd Bradley or *So Much Things To Say: The Oral History of Bob Marley* by Roger Steffens, then this is definitely for you.

Daphne Oram

An Individual Note of Music, Sound and Electronics

Anomie Academic Daphne Oram (1925-2003) was one of the central figures in the development of British experimental electronic music. Having declined a place at the Royal College of Music to become a music balancer at the BBC, she went on to become the co-founder and first director of the BBC Radiophonic Workshop. Oram left the BBC in 1959 to pursue commercial work in television, advertising, film, and theater, to make her own music for recording and performance, and to continue her personal research into sound technology - a passion she had had since her childhood in rural Wiltshire. Her home, a former oasthouse in Kent, became an unorthodox studio and workshop in which, mostly on a shoestring budget, she developed her pioneering equipment, sounds, and ideas. A significant part of her personal research was the invention of a machine that offered a new form of sound synthesis - the Oramics machine. Oram's contribution to electronic music is receiving considerable attention from new generations of composers, sound engineers, musicians, musicologists, and music lovers around the world. Following her death, the Daphne Oram Trust was established to preserve and promote her work, life, and legacy, and an archive created in the Special Collections Library at Goldsmiths, University of London. One of the Trust's ambitions has been to publish a new edition of Oram's one and only book, 'An Individual Note of Music, Sound and Electronics', which was originally published in 1972. With support from the Daphne Oram Archive, the Trust has now been able to realize this ambition. 'An Individual Note' is both curious and remarkable. When commissioned to write a book, she was keen to avoid it becoming a manual or how-to guide, preferring instead to use the opportunity to muse on the subjects of music, sound, and electronics, and the relationships between them. At a time when the world was just starting to engage with electronic music and the technology was still primarily in the hands of music studios, universities, and corporations, her approach was both innovative and inspiring, encouraging anyone with an interest in music to think about the nature, capabilities, and possibilities that the new sounds could bring. And her thinking was not limited to just the future of the orchestra, synthesizer, computer, and home studio, but ventured, with great spirit and wit, into other realms of science, technology, culture, and thought. 'An Individual Note' is a playful yet compelling manifesto for the dawn of electronic music and for our individual capacity to use, experience, and enjoy it. This new edition of 'An Individual Note' features a specially commissioned introduction from the British composer, performer, roboticist, and sound historian Sarah Angliss.
