National Audit Office - The Food Standards Agency, Department for Environment, Food & Rural Affairs, Department of Health: Food Safety and Authenticity in the Preprocessed Meat Supply Chain - HC 685 The Food Standards Agency, Department for Environment, Food & Rural Affairs, Department of Health *The Stationery Office* While arrangements for identifying and testing for risks to food safety are relatively mature and effective, similar arrangements for the authenticity of food are not. Government has failed to identify the possibility of adulteration of beef products with horsemeat despite indications of heightened risk. A split in responsibilities for food policy between the Food Standards Agency and two Whitehall departments in 2010 has led to confusion among stakeholders about the role of the Agency and Defra in responding to food authenticity incidents. Local authorities said they continue to be unclear on whom to contact in certain areas of food policy. Local authorities reported 1,380 cases of food fraud in 2012 - up by two-thirds since 2010. The Government recognizes that it needs to address weaknesses in its intelligence gathering and sharing and its understanding of opportunities for fraud throughout the modern food chain. Only one-third of English local authorities record laboratories' test results on the Agency's national database. The total number of food samples tested by official control laboratories in England has gone down by a quarter since 2009-10. Although a substantial amount of testing is carried out by private food businesses, public authorities do not know the amount, nature or results of these tests. Among the NAO's recommendations is that some resource should be shifted from such activities as the inspection of slaughter houses to the checking of the manufacture of processed meat products and the long supply chains involved, but this will require European agreement. Section 15 Report Year The Auditor's Guide to Blockchain Technology Architecture, Use Cases, Security and Assurance *CRC Press* The 21st century has been host to a number of information systems technologies in the areas of science, automotive, aviation and supply chain, among others. But perhaps one of its most disruptive is blockchain technology whose origin dates to only 2008, when an individual (or perhaps a group of individuals) using the pseudonym Satoshi Nakamoto published a white paper entitled Bitcoin: A peer-to-peer electronic cash system in an attempt to address the threat of "double- spending" in digital currency. Today, many top-notch global organizations are already using or planning to use blockchain technology as a secure, robust and cutting-edge technology to better serve customers. The list includes such well-known corporate entities as JP Morgan, Royal Bank of Canada, Bank of America, IBM and Walmart. The tamper-proof attributes of blockchain, leading to immutable sets of transaction records, represent a higher quality of evidence for internal and external auditors. Blockchain technology will impact the performance of the audit engagement due to its attributes, as the technology can seamlessly complement traditional auditing techniques. Furthermore, various fraud schemes related to financial reporting, such as the recording of fictitious revenues, could be avoided or at least greatly mitigated. Frauds related to missing, duplicated and identical invoices can also be greatly curtailed. As a result, the advent of blockchain will enable auditors to reduce substantive testing as inherent and control audit risks will be reduced thereby greatly improving an audit's detection risk. As such, the continuing use and popularity of blockchain will mean that auditors and information systems security professionals will need to deepen their knowledge of this disruptive technology. If you are looking for a comprehensive study and reference source on blockchain technology, look no further than The Auditor's Guide to Blockchain Technology: Architecture, Use Cases, Security and Assurance. This title is a must read for all security and assurance professionals and students looking to become more proficient at auditing this new and disruptive technology.
