This book examines China's role in the international division of labor: it analyzes the scale and scope of China's manufacture; the type and relative sophistication of its exports in the world market; and its position in the global value chain. It shows that China monopolizes industrial production by being the processing center of world. Based on extensive original research, this book examines the structure of production in global manufacturing industries, applying both qualitative and quantitative methods. It analyzes each segment of the value chain, exploring in depth several specific industrial sectors. It concludes that China has become deeply integrated into global manufacturing industry; that China's position in the value chain is still quite low, with relatively low research and development (R&D) and other similar high-value activities; but that, in some sectors, China is catching up rapidly, especially in newly emerging sectors. **Business China** HWM Singapore's leading tech magazine gives its readers the power to decide with its informative articles and in-depth reviews. **Global Knowledge Cultures** [BRILL](#) **Global Knowledge Cultures** provides a collection of accessible essays by some of the world's leading legal scholars, new media analysts, techno activists, library professionals, educators and philosophers. These studies highlight how, throughout East Asia, spatial considerations have influenced Government policies at the national, regional, and local levels. Key themes include how countries have dealt with: (1) agglomeration economies, urbanization, and regional disparities; (2) improving connectivity with infrastructure investments; and (3) eliminating barriers across and within countries to favor the movement of labor, goods and services. Achievements vary widely across countries: while some succeeded in enhancing competitiveness and improving social outcomes, others are experiencing increasing inequalities and failures to spur growth in disadvantaged areas. The book highlights many examples of how the new economic geography is reshaping development objectives: from initiatives to foster growth via enhanced agglomeration and improved local connectivity to the world economy, to special decentralization programs that channel resources to lagging regions. This volume will be of great interest to readers working in the areas of economic policy, poverty reduction and urban-rural development strategies, and transport-led infrastructure policy.
