HUMAN-COMPUTER INTERACTION

COMMUNICATION, COOPERATION, AND APPLICATION DESIGN

CRC Press This volume, one of a two volume set, is from the August 1999 HCI International conference papers presented in Munich, Germany. **Human Computer Interaction: Communication, Cooperation, and Application Design** focuses on the informative and communicative aspects of computer use. A larger number of contributions is concerned with computer-supported cooperation using a wide variety of different techniques. In keeping with the increased focus of HCI International '99 on internet issues and aspects of the global information society, many papers in this volume are centered around information and communication networks and their implications for work, learning, and every-day activities. Due to the growing number and diversity of groups utilizing modern information technologies, issues of accessibility and design for all are becoming more and more pertinent. A range of papers in this volume address these issues and provide the latest research and development results.

TECHNOLOGY IN SOCIAL WORK EDUCATION AND CURRICULUM

THE HIGH TECH, HIGH TOUCH SOCIAL WORK EDUCATOR

Routledge Save time and trouble as you incorporate technology into your social work curriculum The dramatic increase in the use of computers and other forms of technology in social work education and practice has educators, trainers, and administrators investing valuable time, money, and effort into trying to make the transition from traditional teaching to a Web-assisted learning environment. Technology in Social Work Education and Curriculum takes the mystery out of the online experience with practical information on using technology to enhance and enrich learning—but not at the expense of the “human” approach to social work. This unique book presents a variety of creative and interesting methods for incorporating technology that’s affordable and user-friendly, and for developing online skills that won’t become obsolete as computer hardware and software evolves. Technology in Social Work Education and Curriculum transforms technology into an everyday resource for agency field instructors, human service educators, trainers, and social work administrators. The book addresses concerns that educators with limited technical skills may have in using technology to teach cultural competency, group work, research, direct practice, social policy and advocacy, and field practicum, presenting hands-on approaches that are innovative but accessible. And by focusing on approaches rather than simply reviewing available hardware and software, the book provides you with background knowledge that makes it easier for you to successfully incorporate online learning into the classroom. Technology in Social Work Education and Curriculum examines using instructional technology to emotionally engage students in the learning process using digital video and qualitative data analysis software to teach group practice the role technology plays in advocacy distance-education technologies in policy education incorporating Web-assisted learning into a traditional classroom setting the advantages of distance education over more conventional approaches a model for planning the use and integration of computer technology in schools of social work how the behaviors of computer consultants can affect the students who seek their help using innovation diffusion theory in technology planning and much more! Social workers have traditionally embraced the latest technologies and scientific developments since the earliest days of the profession. Technology in Social Work Education and Curriculum helps continue that tradition, offering invaluable guidance to educators and administrators, no matter how experienced—or inexperienced—they are in dealing with communications technologies.

THE BASIC PRACTICE OF STATISTICS

Palgrave Macmillan The Basic Practice of Statistics has become a bestselling textbook by focusing on how statistics are gathered, analyzed, and applied to real problems and situations—and by confronting student anxieties about the course's relevance and difficulties head on. With David Moore's pioneering "data analysis" approach (emphasizing statistical thinking over computation), engaging narrative and case studies, current problems and exercises, and an accessible level of mathematics, there is no more effective textbook for showing students what working statisticians do and what accurate interpretations of data can reveal about the world we live in. In the new edition, you will once again see how everything fits together. As always, Moore's text offers balanced content, beginning with data analysis, then covering probability and inference in the context of statistics as a whole. It provides a wealth of opportunities for students to work with data from a wide range of disciplines and real-world settings, emphasizing the big ideas of statistics in the context of learning specific skills used by professional statisticians. Thoroughly updated throughout, the new edition offers new content, features, cases, data sources, and exercises, plus new media support for instructors and students—including the latest version of the widely-adopted StatsPortal. The full picture of the contemporary practice of statistics has never been so captivatingly presented to an uninitiated audience.
