Improving Advanced Study of Mathematics and Science in U.S. High Schools

National Academies Press This book takes a fresh look at programs for advanced studies for high school students in the United States, with a particular focus on the Advanced Placement and the International Baccalaureate programs, and asks how advanced studies can be significantly improved in general. It also examines two of the core issues surrounding these programs: they can have a profound impact on other components of the education system and participation in the programs has become key to admission at selective institutions of higher education. By looking at what could enhance the quality of high school advanced study programs as well as what precedes and comes after these programs, this report provides teachers, parents, curriculum developers, administrators, college science and mathematics faculty, and the educational research community with a detailed assessment that can be used to guide change within advanced study programs.

A Guide to Statistical Methods and to the Pertinent Literature / Literatur Zur Angewandten Statistik

Springer Readers of my books, students and scientists, often ask for special references not commonly found in introductory or intermediate books on statistics. From the titles and contents of 1449 key papers and books which are listed and numbered in Section 5, I have selected keywords and subject headings and arranged them alphabetically together with the numbers of pertinent references in Section 3. Number 1153, for instance, denotes my book "Applied Statistics". It contains a bibliographical section on pages 568 to 641. Supplementary material is displayed in this small bibliographical guide. It also complements well-known textbooks of Box, Hunter and Hunter (No.121), Dixon and Massey (No.286), Snedecor and Cochran (No. 1238), and many recent competitors. Since the methodology of statistics is expanding rapidly, many methods are not considered at all or only introduced in the basic textbooks of statistics. There is a need for intermediate statistical methods concerned with increasingly complicated applications of statistics to actual research situations. Here the specification of terms helps to find some sources. Since the references vary considerably in length and content, the number of culled or extracted terms per referenced page varies even more, as does also their degree of specialization; however in most cases an intermediate statistical level is maintained.
