The overriding theme is the notion that the availability and syntactic positioning of arguments is not a matter of chance but arises from laws governing the structure of lexical entries and from laws governing syntactic structures themselves. Along the way, Zero Syntax also examines issues of broad significance to current theoretical linguistic research in syntax and lexical semantics. Zero Syntax develops two main topics: a simple view of syntactic linking regularities that it defends in the domain of Experiencer predicates (predicates such as annoy), and a theory of syntactic constituency that involves two parallel modes of structural organization (one of which is the Cascade syntax). The theme that ties these issues together is the supposition that phonologically null (zero) morphology is present in structure, detectable through its syntactic and morphological consequences. The arguments in Zero Syntax will be relevant to debates about such issues as empty elements in syntax and morphology, whether syntactic structures should be binary branching, the structure of double-object constructions, and whether verbs have multiple meanings related by lexical rules or abstract/general meanings that are ambiguated in particular constructions. **Current Studies in Linguistics No. 27 The Vintage Mencken** Hadley Press This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1902 Excerpt: ...earth. r' = radius of moon, or other body. P = moon's horizontal parallax = earth's angular semidiameter as seen from the moon. f = moon's angular semidiameter. Now = P (in circular measure), $r'-r = r$ (in circular measure);'. r : r' :: P : P' , or (radius of earth): (radius of moon):: (moon's parallax): (moon's semidiameter). Examples. 1. Taking the moon's horizontal parallax as $57'$, and its angular diameter as $32'$, find its radius in miles, assuming the earth's radius to be 4000 miles. Here moon's semidiameter = $16'$;.-. $4000:: 57': 16'$;.-. $r = 400 \frac{16}{57} = 1123$ miles. 2. The sun's horizontal parallax being $8''8$, and his angular diameter $32V$ find his diameter in miles. ' Am. 872,727 miles. 3. The synodic period of Venus being 584 days, find the angle gained in each minute of time on the earth round the sun as centre. Am. $1''-54$ per minute. 4. Find the angular velocity with which Venus crosses the sun's disc, assuming the distances of Venus and the earth from the sun are as 7 to 10, as given by Bode's Law. Since (fig. 50) $S V: VA:: 7: 3$. But Sr has a relative angular velocity round the sun of $1''-54$ per minute (see Example 3); therefore, the relative angular velocity of $A V$ round A is greater than this in the ratio of 7: 3, which gives an approximate result of $3''-6$

per minute, the true rate being about 4" per minute. Annual ParaUax. 95. We have already seen that no displacement of the observer due to a change of position on the earth's surface could apparently affect the direction of a fixed star. However, as the earth in its annual motion describes an orbit of about 92 million miles radius round the sun, the different positions in space from which an observer views the fixed stars from time to time throughout the year must be separated ... **New Jersey Noir** Akashic Books Discover the darker side of the Garden State with this anthology of gritty mystery stories. Akashic Books continues its award-winning series of original noir anthologies, launched in 2004 with Brooklyn Noir. Each volume is comprised of all-new stories, each one set in a distinct location within the geographical area of the book. In New Jersey Noir, a star-studded cast of authors sifts through the hidden dirt of the Garden State. Featuring brand-new stories (and a few poems) by Joyce Carol Oates, Jonathan Safran Foer, Robert Pinsky, Edmund White & Michael Carroll, Richard Burgin, Pulitzer Prize-winner Paul Muldoon, Sheila Kohler, C.K. Williams, Gerald Stern, Lou Manfredo, S.A. Solomon, Bradford Morrow, Jonathan Santlofer, Jeffrey Ford, S.J. Rozan, Barry N. Malzberg & Bill Pronzini, Hirsh Sawhney, and Robert Arellano. Praise for New Jersey Noir "Oates's introduction to Akashic's noir volume dedicated to the Garden State, with its evocative definition of the genre, is alone worth the price of the book . . . Highlights include Lou Manfredo's "Soul Anatomy," in which a politically connected rookie cop is involved in a fatal shooting in Camden; S.J. Rozan's "New Day Newark," in which an elderly woman takes a stand against two drug-dealing gangs; and Jonathan Santlofer's "Lola," in which a struggling Hoboken artist finds his muse Poems by C.K. Williams, Paul Muldoon, and others—plus photos by Gerald Slota—enhance this distinguished entry." —Publishers Weekly "It was inevitable that this fine noir series would reach New Jersey. It took longer than some readers might have wanted, but, oh boy, was it worth the wait . . . More than most of the entries in the series, this volume is about mood and atmosphere more than it is about plot and character . . . It should go without saying that regular readers of the noir series will seek this one out, but beyond that, the book also serves as a very good introduction to what is a popular but often misunderstood term and style of writing." —Booklist, Starred Review "A lovingly collected assortment of tales and poems that range from the disturbing to the darkly humorous." —Shelf Awareness **Defying Doomsday** Twelfth Planet Press Teens form an all-girl band in the face of an impending comet. Contributions range from mathematics and theoretical computer science to biology. Aristid Lindenmayer introduced language-theoretic models for developmental biology in 1968. Since then the models have been customarily referred to as L systems. Lindenmayer's invention turned out to be one of the most beautiful examples of interdisciplinary science: work in one area (developmental biology) induces most fruitful ideas in other areas (theory of formal languages and automata, and formal power series). As evident from the articles and references in this book, the interest in L systems is continuously growing. For newcomers the first contact with L systems usually happens via the most basic class of L systems, namely, DOL systems. Here "0" stands for zero context between developing cells. It has been a major typographical problem that printers are unable to distinguish between 0 (zero) and 0 (oh). Thus, DOL was almost always printed with "oh" rather than "zero", and also pronounced that way. However, this misunderstanding turned out to be very fortunate. The wrong spelling "DOL" of "DOL" could be read in the suggestive way: DO L Indeed, hundreds of researchers have followed this suggestion. Some of them appear as contributors to this book. Of the many who could not contribute, we in particular regret the absence of A. Ehrenfeucht, G. Herman and H.A. Maurer whose influence in the theory of L systems has been most significant. **IRM Strategic Plan Fiscal Years 1998-2002 Follow the Ninja! She thought that a successful career and a comfortable life in the city were enough to be happy. Did she really need to know about the woman who had given her away? Adopted at birth, her first few years were happy. It hadn't mattered that she didn't know her heritage; she had parents who loved her and wanted her. But divorce, and then death, ripped their tiny family apart, and at the tender age of six, she entered the foster care system. Over the next dozen years, she shuffled from home to home. Finding her roots seemed an impossible dream. But dreams are resilient. An unexpected discovery awakens old yearnings of belonging to a family, of being part of something bigger than herself.
