Hygiene and Related Behaviors for Children and Adolescents with Autism Spectrum and Related Disorders

A Fun Curriculum with a Focus on Social Understanding

AAPC Publishing This innovative curriculum teaches important hygiene skills and associated social understanding using a fun approach that targets the core characteristics and learning styles of children and adolescents on the autism spectrum. The author's generous use of structure, predictability, self-monitoring, and ways to convey and check for social understanding is worked into all discussion and activities. Ranging from basic daily hygiene to picking, using public restrooms, burping, and farting, topics focus on healthy and socially acceptable behaviors. The book is the answer to the constant search for inventive and intriguing ways to teach often quite boring topics surrounding functional life skills. Lesson plans are well conceptualized and organized, showing that the author knows what makes children and adolescents with Asperger Syndrome and related disorders tic.

Visual Support for Children with Autism Spectrum Disorders

Materials for Visual Learners

AAPC Publishing Combining their years of experience working with individuals on the autism spectrum, both here and around the world, authors Vera Bernard-Opitz and Anne Häußler bring teachers and other professionals practical ideas and teaching methods for offering visual supports to students with autism spectrum disorders and other visual learners. With hundreds of colorful illustrations and step-by-step directions, this book lays the foundation for how to structure teaching environments, as well as offers countless examples of activities for students, ranging from basic skills, to reading and math, to social behavior.

Counting on Communication

The Uganda Nutrition and Early Childhood Development Project

World Bank Publications The Uganda Nutrition and Early Childhood Development Project was one of the World Bank's first projects to demonstrate the value-added of strategic communication. The strategic communication component developed for this project included the use of formative research about values and attitudes with respect to child rearing, in order to develop and test effective messages. The communication strategy was developed in a highly participatory manner and included nurturing a team of champions for the project among policymakers, district officials, community leaders, and grassroots organizations to advocate for the project. It

also included two-way communication activities developed to address the practices and behaviors that would need to be changed in order for the project to be successful, rather than merely disseminating messages based on assumptions of project benefits.

Personal Hygiene? What's that Got to Do with Me?

Jessica Kingsley Publishers This book is a curriculum for students with autism, AS, learning and developmental disabilities, designed to help them understand how others perceive their appearance and the social implications of neglecting personal hygiene. Simple factual information is accompanied by cartoons that emphasize how others view someone with poor hygiene.

Taking Care of Myself

A Hygiene, Puberty and Personal Curriculum for Young People with Autism

Future Horizons This book is designed to address the health and safety needs of students aged five and up with autism spectrum disorders.

Curricula for Teaching Students with Autism Spectrum Disorder

Springer This book provides an extensive overview of curricula and instructional strategies for teaching children with autism spectrum disorder (ASD). It offers an empirically solid framework for designing and developing interventions for learners along the autism spectrum by reducing skill deficits and enhancing learner strengths while being flexible enough to allow for individual differences. The book discusses key concepts in educating individuals with ASD as they impact the processes of syllabus building, from planning goals and objectives to generating content choosing appropriate teaching strategies, and assessing progress. Chapters detail curriculum designs in academic areas such as language skills, science, and social studies, as well as functional skills, including independent living, career development, and preventing social victimization. The book concludes with recommendations for future interventions and curricula-building. Among the topics covered: Communication and autism spectrum disorder. Mathematical problem-solving instruction for students with ASD. Visual arts curriculum for students with ASD. How to build programs focused on daily living and adult independence. Sexuality education for students with ASD. Curricula for Teaching Students with Autism Spectrum Disorder is a must-have resource for researchers, graduate students, and clinicians and related therapists and professionals in clinical child and school psychology, childhood/special education, social work, developmental psychology, behavioral therapy/rehabilitation, and child and adolescent psychiatry.

Parenting Matters

Supporting Parents of Children Ages 0-8

National Academies Press Decades of research have demonstrated that the parent-child dyad and the environment of the family—which includes all primary caregivers—are at the foundation of children's well-being and healthy development. From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. Parenting Matters identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States.

The Guide to Dating for Teenagers with Asperger Syndrome

AAPC Publishing "Dating is difficult for everyone. For a teen with Asperger Syndrome, it can be overwhelming. Special education teacher Jeannie Uhlenkamp tackles some of the specific issues facing teens with AS. Written in a question-and-answer format, this much-needed book offers insight and practical advice on dating challenges. Each topic is followed by Discussion Questions (to get the conversation flowing between teens and parents/teachers) and a Main Idea (which succinctly wraps up the main point). Also included are special notes to define the more illusive vocabulary and concepts of today's dating world."--Provided by publisher.

Impact of a gender and nutrition behavioral change communication amid the COVID-19 crisis in Myanmar's Central Dry Zone

Intl Food Policy Res Inst Social behavior change communication (SBCC) interventions on gender and nutrition are now commonly implemented, but their impact on diet quality and empowerment is rarely assessed rigorously. We estimate the impact of a nutrition and gender SBCC intervention on women's dietary diversity and empowerment in Myanmar during an especially challenging period—the first year of the COVID-19 pandemic. The intervention was implemented as a cluster-randomized controlled trial in 30 villages in Myanmar's Central Dry Zone. Our analysis employs data from the baseline survey implemented in February 2020 and a phone survey implemented in February–March 2021 and focuses on women's dietary diversity and sub-indicators of the project-level women's empowerment in agriculture index (pro-WEAI). Two indicators of women's empowerment—inputs to productive decisions and access to and decisions over credit—improved, indicating that SBCC interventions can contribute to changing gendered perceptions and behaviors; however, most of the empowerment indicators did not change, indicating that much of gendered norms and beliefs take time to change. Women's dietary diversity scores were higher by half a food group out of 10 in treatment villages. More women in treatment villages consumed nuts, milk, meat or fish, and Vitamin A-rich foods daily than in control villages. We show that even in the setting of a pandemic, a SBCC intervention can be delivered through a range of tools, including household visits, phone-based coaching, and voice-based training, that are responsive to local and individual resource limitations. Gender messaging can change some gendered perceptions; but it may take more time to change deeply ingrained gender norms. Nutrition messaging can help counter the declines in dietary quality that would be expected from negative shocks to supply chains and incomes.

Behavior Mapping

A Visual Strategy for Teaching Appropriate Behavior to Individuals with Autism Spectrum and Related Disorders

A manual for creating visual maps to help students whose primary learning style is visual become better problem solvers by literally showing them cause and effect and choices in various situations. The ultimate goal is to make students more successful learners and reduce the incidence of unacceptable behavior.--Publisher.

Measuring Childcare Practices

Approaches, Indicators, and Implications for Programs

Intl Food Policy Res Inst To thrive, young children need more than food. It is now widely recognized that they also require a healthy and sanitary environment and adequate care and feeding practices. As governments and NGOs initiate programs to ensure child survival, health, and development, the need for simple methods and indicators to measure the effectiveness of these programs grows. With a strong focus on methodology, this food policy review describes measurement approaches, problems, and solutions and offers practical suggestions for monitoring and evaluating child nutrition programs.

Children's Health, the Nation's Wealth

Assessing and Improving Child Health

National Academies Press Children's health has clearly improved over the past several decades. Significant and positive gains have been made in lowering rates of infant mortality and morbidity from infectious diseases and accidental causes, improved access to health care, and reduction in the effects of environmental contaminants such as lead. Yet major questions still remain about how to assess the status of children's health, what factors should be monitored, and the appropriate measurement tools that should be used. *Children's Health, the Nation's Wealth: Assessing and Improving Child Health* provides a detailed examination of the information about children's health that is needed to help policy makers and program providers at the federal, state, and local levels. In order to improve children's health-and, thus, the health of future generations-it is critical to have data that can be used to assess both current conditions and possible future threats to children's health. This compelling book describes what is known about the health of children and what is needed to expand the knowledge. By strategically improving the health of children, we ensure healthier future generations to come.

Sleep Hygiene and Problem Behaviors in Snoring Children

Involving Children For Hand Washing Behavior Change: Repeated Message Delivery to Foster Action

Anchor Academic Publishing (aap_verlag) Changing the hand washing behavior in a community is a challenge of different disciplines, including psychology and media practice. Distinct beliefs prevent people from washing their hands properly in critical moments. Moreover, each segment of the community has a different belief. Hence, adults, children, women, and men should be addressed differently. This experimental study explores the process of isolating and changing the beliefs of grade six students from the Chandba Primary School, in Chilga Local Administration North Gondar Zone Amhara Region, in Ethiopia. The intervention activities are done to increase a positive association with water and soap concerning the three critical moments, namely before eating, before touching or preparing food, and after defecation. The study describes the overall practical implementations of combined behavior change theories, and shows how they can be applied to the selection of target beliefs. The present study identifies important variables that are negatively and positively associated with hand hygiene. The results are based on a questionnaire, observations, and practical evaluation of hand washing skills that were identified during the four week intervention. • The study helps to develop communicators to change children's hygiene behavior. • It has significance in helping the participants to understand better ways of using locally available materials and methods for hygiene facilities preparation. • It shows the effectiveness of combined implementation of practical participation and multimedia message delivery regarding hygiene behavior change interventions. In general, the study reviles the complementary effect of multiple communication tools and models of treatment as well as their appropriate analytic strategies to change participant's hygiene behavior.

What's Happening to Ellie?

A book about puberty for girls and young women with autism and related conditions

Jessica Kingsley Publishers Ellie notices that her body is changing. Hair is growing in new places and there are other changes happening too. Ellie's mum helps her understand that she has started growing into a woman. Following Ellie as she begins to notice changes to her body, this simple resource helps parents and carers teach girls with autism and related conditions about puberty. It covers all the changes that they will experience, both emotional such as new feelings and physical such as periods. This fully illustrated positive and entertaining book provides the perfect opportunity to talk about puberty with girls and young women with autism or related conditions.

A Clinical Guide to Pediatric Sleep

Diagnosis and Management of Sleep Problems

Lippincott Williams & Wilkins Written for busy primary care practitioners, this book is a practical clinical guide to common pediatric sleep disorders and their treatment. Information is organized by specific disorder and by the most frequent presenting complaints. Symptom-based algorithms will enable practitioners to evaluate sleep complaints in a stepwise manner. Other features include symptom checklists for specific disorders and chapters on sleep problems in special populations. Appendices provide practical tools for screening for sleep problems, evaluating sleep studies, and counseling families. This edition includes updated ICSD-2 and ICD-10 diagnostic criteria and new and revised American Academy of Sleep Medicine Standards of Practice guidelines. Other highlights include new chapters on sleep hygiene and sleep enuresis, updated and expanded chapters on all sleep disorders, and up-to-date information on sleep medications and sleep in special populations. A companion Website will offer parent handouts for each age group

and each sleep disorder, as well as screening questionnaires and sleep diaries.

The Parents' Guide to Psychological First Aid

Helping Children and Adolescents Cope with Predictable Life Crises

Oxford University Press, USA Presents articles by recognized experts who provide parents with the information needed in order to help children navigate the many trying problems that typically afflict young people.

Beeper's Obsession

"Beeper's Obsession" is a fun and colorful children's tale that seeks to impart a valuable lesson of empathy and tolerance to adults and kids alike. With loveable characters and a memorable story, children will love reading about John's trip to the grocery store and his unique obsession with fire alarms.--Publisher.

Departments of Labor, Health and Human Services, Education, and related agencies appropriations for 1990 hearings before a subcommittee of the Committee on Appropriations, House of Representatives, One Hundred First Congress, first session

Handbook of Sleep Medicine

Lippincott Williams & Wilkins Expanded to include detailed information on pharmacologic and non-pharmacologic treatment, the Handbook of Sleep Medicine continues to offer a concise overview of the field for trainees and practitioners in the many disciplines that deal with sleep disorders. Chapters provide a broad introduction to sleep disturbances and associated comorbidities and discuss the major sleep disorders in terms of epidemiology, diagnostic criteria, differential diagnosis, assessment tools, management, and follow-up. Of special value are algorithms that provide a logical approach to evaluating sleep-related complaints. All chapters adhere to the new International Classification of Sleep Disorders (ICSD-2), which is outlined in an appendix with ICD-9 codes.

The Parents' Guide to Teaching Kids with Asperger Syndrome and Similar ASDs Real-Life Skills for Independence

Harmony The definitive resource for teaching kids with Asperger syndrome the life skills that build independence, confidence, and self-esteem. Children with autism spectrum disorders learn differently. Our kids' choices are too often limited and their paths to success restricted, not by a lack of intellectual ability but by deficits in acquiring, applying, and generalizing basic life skills. Success in school, at home, on the playground, and beyond depends on mastering countless basic living skills that most other kids just "pick up" almost by osmosis. This book shows parents how to teach these so-called easy skills to complex learners. This is the first book for parents and caregivers of kids with Asperger syndrome and similar learning profiles that features strategies based on applied behavior analysis--the most widely accepted, evidence-based, and effective teaching method for learners with ASDs--including how to: -Identify critical skills appropriate for your child's age--how to teach them and why -Implement new techniques that can replace, mimic, prompt, override, or impose missing order on your child's learning style -Design a curriculum for your child that reduces reliance on prompts (including parents) and promotes new learning, new behaviors, and independence

Handbook of Health Behavior Research III

Demography, Development, and Diversity

Springer Science & Business Media Volume 3 relates the demography of health behavior to developmental and diversity issues. Unique discussions of the health behaviors of gay males, lesbians, persons with HIV, and caregivers themselves are included. Each volume features extensive supplementary and integrative material prepared by the editor, the detailed index to the entire four-volume set, and a glossary of health behavior terminology.

Clean

A History of Personal Hygiene and Purity

OUP Oxford Why do we still have nits? What exactly are 'purity rules'? And why have baths scarcely changed in 200 years? The long history of personal hygiene and purity is a fascinating subject that reveals how closely we are linked to our deeper past. In this pioneering book, Virginia Smith covers the global history of human body-care from the Neolithic to the present, using first-hand accounts and sources. From pre-historic grooming rituals to New Age medicine, from ascetics to cosmetics, Smith looks at how different cultures have interpreted and striven for personal cleanliness and shows how, throughout history, this striving for purity has brought great social benefits as well as great tragedies. It is probably safe to say that no-one who reads this book will look at his or her body (or bathroom) in quite the same way again.

Case-Smith's Occupational Therapy for Children and Adolescents - E-Book

Elsevier Health Sciences The number one book in pediatric OT is back! Focusing on children from infancy to adolescence, Case-Smith's Occupational Therapy for Children and Adolescents, 8th Edition provides comprehensive, full-color coverage of pediatric conditions and treatment techniques in all settings. Its emphasis on application of evidence-based practice includes: eight new chapters, a focus on clinical reasoning, updated references, research notes, and explanations of the evidentiary basis for specific interventions. Coverage of new research and theories, new techniques, and current trends, with additional case studies, keeps you in-step with the latest advances in the field. Developmental milestone tables serve as a quick reference throughout the book! NEW! Eight completely new chapters cover Theory and Practice Models for Occupational Therapy With Children, Development of Occupations and Skills From Infancy Through Adolescence, Therapeutic Use of Self, Observational Assessment and Activity Analysis, Evaluation Interpretation, and Goal Writing, Documenting Outcomes, Neonatal Intensive Care Unit, and Vision Impairment. NEW! A focus on theory and principles Practice Models promote clinical reasoning. NEW! Emphasis on application of theory and frames of reference in practice appear throughout chapters in book. NEW! Developmental milestone tables serve as quick reference guides. NEW! Online materials included to help facilitate your understanding of what's covered in the text. NEW! Textbook is organized into six sections to fully describe the occupational therapy process and follow OTPF.

Domestic Water Use, Hygiene Behavior, and Children's Diarrhea in Rural Uganda

ABSTRACT: This dissertation examines the factors that account for hand-washing behavior, including both infrastructural and ideational factors. Hand washing has been repeatedly demonstrated to reduce the incidence of diarrhea, which remains one of the leading causes of under-five mortality in the world. This dissertation also provides a detailed ethnography on domestic water use and water-collection behaviors, because a full understanding of hand-washing behavior can only come from a holistic study of such daily behaviors. The research is based on 14 months of fieldwork in Bugobero in Mbale district, Uganda, where the Gisu people reside.

Clinical Guide to Toilet Training Children

Springer This book offers a comprehensive overview of the universal issue of toilet training in children and explores issues that need to be considered by clinicians and other professionals. The book begins with a historical overview of the field, including origins and reviews of current practices. It discusses various toileting problems and their side effects, risk factors, normal developmental milestones in toileting, and theories of toileting. Chapters identify behavior problems (e.g., self-injury, noncompliance) as well as medical conditions (e.g., diabetes, constipation) that can affect continence, with proven strategies for addressing these challenges in toilet training children, including those with intellectual and developmental disabilities. The book concludes with a discussion of the strengths of current toilet training practices as well as suggestions for areas where continued improvement is required. Topics featured in this book include: · Complications and side effects associated with the lack of toileting skills. · Technology used in toilet training. · Applications of operant-based behavioral principles to toilet training. · Toilet training strategies involving modeling and modifications of the physical environment. · Toilet training children with physical disabilities. The Clinical Guide to Toilet Training Children is a must-have resource for researchers, graduate students, clinicians, and related therapists and professionals in clinical child and school psychology, pediatrics, family studies, developmental psychology, nursing, social work, and behavioral therapy/rehabilitation.

Neuroscience of Preference and Choice

Cognitive and Neural Mechanisms

Academic Press One of the most pressing questions in neuroscience, psychology and economics today is how does the brain generate preferences and make choices? With a unique interdisciplinary approach, this volume is among the first to explore the cognitive and neural mechanisms mediating the generation of the preferences that guide choice. From preferences determining mundane purchases, to social preferences influencing mating choice, through to moral decisions, the authors adopt diverse approaches to answer the question. Chapters explore the instability of preferences and the common neural processes that occur across preferences. Edited by one of the world's most renowned cognitive neuroscientists, each chapter is authored by an expert in the field, with a host of international contributors. Emphasis on common process underlying preference generation makes material applicable to a variety of disciplines - neuroscience, psychology, economics, law, philosophy, etc. Offers specific focus on how preferences are generated to guide decision making, carefully examining one aspect of the broad field of neuroeconomics and complementing existing volumes. Features outstanding, international scholarship, with chapters written by an expert in the topic area

A Germ's Journey

Dirty Hands! Clean Hands!

This delightful board book follows the journey of a germ using unique heat-sensitive pages and combining interaction, play and learning, showing pre-schoolers the importance of clean hands. The journey, from the toilet seat to the tummy (and out again!), explores the concepts of germs being invisible to the naked eye, multiplying and causing illness. By placing their warm hands on the thermochromic patches, the multiplying germs are revealed. The simple, bright and bold illustrations by Charlie Evans allow children to develop an understanding of science and health from a young age, while having fun in the process

Early childhood caries and its association with socio-behavioural and parental factors among 2-6 year old children

GRIN Verlag Doctoral Thesis / Dissertation from the year 2016 in the subject Medicine - Dentistry, , language: English, abstract: Oral health is related to general health and quality of life, which emphasizes the importance of retaining good functional dentition. It is associated with development of healthy personality, perception and enables an individual to speak, eat and socialize without active disease and discomfort. The role of nutrition is also related to poor oral health affecting growth and cognitive development that leads to medical complications of untreated diseases, and result in poor social outcomes. Despite the great improvement in oral health,

many countries still encounter oral diseases which are widely prevalent, more so in the developing countries like India. Dental diseases, such as Dental caries, Periodontal disease and Oral mucosal lesions, are the major public health problem throughout the world with the high prevalence due to altered life style and eating habits. The burden of Oral disease is particularly high for the disadvantageous and poor population groups in both developing and developed countries. Dental caries is an epidemic disease affecting humans of all ages in regions of most common disease of children. Among all the dental diseases, the prevalence of dental caries in India is increasing referred as "Disease of civilization." According to Centre for Disease Control & Prevention, dental caries is perhaps the most prevalent infectious disease. Although it is well understood and preventable but still a global problem among children and young adults. More than 40% of children have caries by the time they reach kindergarten.
