### ENGLISH-PALI DICTIONARY

---

*Motilal Banarsidass Publ.* Here is a reprint of the English-Pali Dictionary by A.P. Buddhadatta Mahathera published long ago by the Pali Text Society in Roman script. This publication was then considered a notable event in the life of the Society for it was a great improvement on a similar earlier work by Venerable W. Piyatissa whose usefulness was reduced for the English-speaking readers by the Pali words being given in Sinhalese script. This is a consider ably enlarged form of a concise English-Pali Dictionary compiled by the present author during the second World War. The author has coined many new words and has given more than one Pali word for some English verbs which do not exist in the ancient languages like Pali. This dictionary, though not an exhaustive one, has proved much useful to the scholars of the Pali language as it presents well chosen material in a single volume of a manageable size. (by the same author) CONCISE PALI-ENGLISH DICTIONARY - This Concise Pali-English Dictionary has been prepared mainly for use by students in schools and colleges. The author is not only an eminent Elder of the Buddhist Order but one of the leading Pali scholars recognized both in the East and West as an authority on the subject. It is to be observed that the author has kept more or less to the traditional sense of words while not altogether ignoring the meanings given by western scholars in their translations and lexicons. Many errors in the latter sources have also been rectified. But the basic sense adopted is in nearly every instance the traditionally accepted meaning in accord with the commentaries and the glossaries. This perhaps is of special value to beginners as thereby they get introduced to the indigenous tradition, thus providing a useful basis on which to build up a more scientific knowledge as the study advances.

## GLOBAL PERSPECTIVES

---

*Routledge Challenging the predominantly Euro-American approaches to the field, this volume brings together essays on a wide array of literary, filmic and journalistic responses to the decade-long wars in Afghanistan and Iraq. Shifting the focus from so-called 9/11 literature to narratives of the war on terror, and from the transatlantic world to Iraq, Syria, Afghanistan, the Afghan-Pak border region, South Waziristan, Al-Andalus and Kenya, the book captures the multiple transnational reverberations of the discourses on terrorism, counter-terrorism and insurgency. These include, but are not restricted to, the realignment of geopolitical power relations; the formation of new terrorist networks (ISIS) and regional alliances (Iraq/Syria); the growing number of terrorist incidents in the West; the changing discourses on security and technologies of warfare; and the leveraging of fundamental constitutional principles. The essays featured in this volume draw upon, and critically engage with, the conceptual trajectories within American literary debates, postcolonial discourse and transatlantic literary criticism. Collectively, they move away from the trauma-centrism and residual US-centrism of early literary responses to 9/11 and the criticism thereon, while responding to postcolonial theory's call for a historical foregrounding of terrorism, insurgency and armed violence in the colonial-imperial power nexus. This book was originally published as a special issue of the *European Journal of English Studies*.*

## OPTO-MECHANICAL SYSTEMS DESIGN, VOLUME 2

---

---

**DESIGN AND ANALYSIS OF LARGE MIRRORS AND STRUCTURES**

---

*CRC Press Opto-Mechanical Systems Design, Fourth Edition* is different in many ways from its three earlier editions: coauthor Daniel Vukobratovich has brought his broad expertise in materials, opto-mechanical design, analysis of optical instruments, large mirrors, and structures to bear throughout the book; Jan Nijenhuis has contributed a comprehensive new chapter on kinematics and applications of flexures; and several other experts in special aspects of opto-mechanics have contributed portions of other chapters. An expanded feature—a total of 110 worked-out design examples—has been added to several chapters to show how the theory, equations, and analytical methods can be applied by the reader. Finally, the extended text, new illustrations, new tables of data, and new references have warranted publication of this work in the form of two separate but closely entwined volumes. This second volume, *Design and Analysis of Large Mirrors and Structures*, concentrates on the design and mounting of significantly larger optics and their structures, including a new and important topic: detailed consideration of factors affecting large mirror performance. The book details how to design and fabricate very large single-substrate, segmented, and lightweight mirrors; describes mountings for large mirrors with their optical axes in vertical, horizontal, and variable orientations; indicates how metal and composite mirrors differ from ones made of glass; explains key design aspects of optical instrument structural design; and takes a look at an emerging technology—the evolution and applications of silicon and silicon carbide in mirrors and other types of components for optical applications.
