Virtual currencies (VCs) and the underlying distributed ledger systems are among these. VCs offer many potential benefits, but also considerable risks. VCs could raise efficiency and in the long run strengthen financial inclusion. At the same time, VCs could be potential vehicles for money laundering, terrorist financing, tax evasion and fraud. While risks to the conduct of monetary policy seem less likely to arise at this stage given the very small scale of VCs, risks to financial stability may eventually emerge as the new technologies become more widely used. National authorities have begun to address these challenges and will need to calibrate regulation in a manner that appropriately addresses the risks without stifling innovation. As experience is gained, international standards and best practices could be considered to provide guidance on the most appropriate regulatory responses in different fields, thereby promoting harmonization and cooperation across jurisdictions. **Expert Scientific Group on Phase One Clinical Trials Final Report ; 30th November 2006** TSO This particular Expert Scientific Group was established following the very serious adverse reactions that occurred in the first-in-man clinical trial (that is the first time the drug is given to a human) of TGN1412 in March 2006. The trial was performed in a private clinic research unit at Northwick Park Hospital in London. TGN1412 is a monoclonal antibody that was being developed as a medicine to treat leukaemia and autoimmune diseases such as rheumatoid arthritis. In the clinical trial, six healthy male volunteers experienced severe systemic adverse reactions soon after receiving TGN1412 intravenously. All six volunteers developed a cytokine (small protein molecules that transmit signals between immune cells and tissue cells) release syndrome with multi-organ failure and required intensive treatment and supportive measures. The Expert Group states that the pre-clinical development studies that were performed with TGN1412 did not predict a safe dose for use in humans, even though current regulatory requirements were met. The Expert Scientific Group has set out 22 recommendations that should increase the safety of volunteers in future clinical trials, and these cover the following areas: the preclinical and early clinical development; the process of preparation and review of clinical trial applications, and early access to advice for both regulators and sponsors; the determining and administering of the initial doses in man; the clinical environment for first-in-man studies and the development of the skills and training to meet future needs. **IBM Business Process Manager Version 8.0 Production Topologies** IBM Redbooks This IBM® Redbooks® publication describes how to build production topologies for IBM Business Process Manager V8.0.
