This book assists novice and experienced teachers in each of these fields to develop a teaching framework that incorporates simulation. The Manual of Simulation in Healthcare, Second Edition is fully revised and updated. New material includes a greater emphasis on patient safety, interprofessional education, and a more descriptive illustration of simulation in the areas of education, acute care medicine, and aviation. Divided into three sections, it ranges from the logistics of establishing a simulation and skills centre and the inherent problems with funding, equipment, staffing, and course development to the considerations for healthcare-centred simulation within medical education and the steps required to develop courses that comply with 'best practice' in medical education. THE CHILD PROTECTION PRACTICE MANUAL

TRAINING PRACTITIONERS HOW TO SAFEGUARD CHILDREN

Oxford University Press Around 85 children die each year in the UK due to abuse or neglect. A number of these deaths are later deemed preventable because the child involved was known to either social services or to a health professional. Cases such as those of Baby P and Victoria Climbié highlighted the failings of these organisations, ones set up to safeguard children. It is the responsibility of every health professional worldwide to identify and respond to child abuse and yet that very responsibility is both emotionally and strategically challenging. The Child Protection Practice Manual: Training practitioners how to safeguard children equips professionals with the ability to recognise a child at risk and the knowledge of how to work with a child already suffering abuse. Practical advice is offered on how to navigate the multi-disciplinary processes. Fictional case studies and exercises immerse the reader in scenarios. Building on this, the authors lead readers through learning points, recommendations, and legislation. With new definitions in child protection ranging from child sexual exploitation, gang violence, radicalisation and internet bullying through to female genital mutilation, witchcraft and spirit possession, honour based violence and forced marriage, this book will be a valuable resource for qualified paediatricians and those in training, as well as professionals who have contact with children such as GPs, nurses, health visitors, social workers, midwives, teachers, lawyers, and community workers.

COLORADO'S HEALTHCARE HERITAGE

A CHRONOLOGY OF THE NINETEENTH AND TWENTIETH CENTURIES VOLUME ONE — 1800-1899

iUniverse In the early days on the Colorado frontier, women took care of family and neighbors because accepting that "we're all in this together" was the only realistic survival strategy—on the high plains, along the Front Range, in the mountain towns, and on the Western Slope. As dangerous occupations became fundamental to Colorado's economy, if they were injured or got sick there was no one to care for the young men who worked as miners, steel workers, cowboys, and railroad construction workers in remote parts of Colorado. So physicians, surgeons, nurses, Catholic Sisters, Reform and Orthodox Jews, Protestants, and other humanitarians established hospitals and—when Colorado became a mecca for people with tuberculosis—sanatoriums. Those pioneers and the communities they served created our community-based humanitarian healthcare tradition. These stories about our Wild West heritage honor the legacy of our 19th-century healthcare pioneers and will inspire and entertain 21st-century readers. Because we can be inspired only if we understand the facts—and because facts are more likely to be understood when presented in context—this chronology includes national and international developments that establish an indispensable frame of reference for understanding how our pioneers created the local-community-based healthcare system that we've inherited.

ANTHROPOLOGY IN MEDICAL EDUCATION**SUSTAINING ENGAGEMENT AND IMPACT**

Springer Nature This volume reflects on how anthropologists have engaged in medical education and aims to positively influence the future careers of anthropologists who are currently engaged or are considering a career in medical education. The volume is essential for medical educators, administrators, researchers, and practitioners, those interested in the history of medicine, global health, sociology of health and illness, medical and applied anthropology. For over a century, anthropologists have served in many roles in medical education: teaching, curriculum development, administration, research, and planning. Recent changes in medical education focusing on diversity, social determinants of health, and more humanistic patient-centered care have opened the door for more anthropologists in medical schools. The chapter authors describe various ways in which anthropologists have engaged and are currently involved in training physicians, in various countries, as well as potential new directions in this field. They address critical topics such as: the history of anthropology in medical education; humanism, ethics, and the culture of medicine; interprofessional and collaborative clinical care; incorporating patient perspectives in practice; addressing social determinants of health, health disparities, and cultural competence; anthropological roles in planning and implementation of medical education programs; effective strategies for teaching medical students; comparative analysis of systems of care in Japan, Uganda, France, United Kingdom, Mexico, Canada and throughout the United States; and potential new directions for anthropological engagement with medicine. The volume overall emphasizes the important role of anthropology in educating physicians throughout the world to improve patient care and population health.

USE AND IMPACT OF COMPUTERS IN CLINICAL MEDICINE

Springer Science & Business Media Computer technology has impacted the practice of medicine in dramatic ways. Imaging techniques provide noninvasive tools which alter the diagnostic process. Sophisticated monitoring equipment presents new levels of detail for both patient management and research. In most of these high technology applications, the computer is embedded in the device; its presence is transparent to the user. There is also a growing number of applications in which the health care provider directly interacts with a computer. In many cases, these applications are limited to administrative functions, e.g., office practice management, location of hospital patients, appointments, and scheduling. Nevertheless, there also are instances of patient care functions such as results reporting, decision support, surveillance, and reminders. This series, Computers and Medicine, focuses upon the direct use of information systems as it relates to the medical community. After twenty five years of experimentation and experience, there are many tested applications which can be implemented economically using the current generation of computers. Moreover, the falling cost of computers suggests that there will be even more extensive use in the near future. Yet there is a gap between current practice and the state-of-the-art.
