Benefits in the manufacturing process for the manufacturer often run counter to the interests of the end user. What speeds up production and saves manufacturing costs results in an engine that is made to fall within a wide set of standards and specifications, often not optimized to meet the original design. In short, cheap and fast engine production results in a sloppy final product. Of course, this is not what enthusiasts want out of their engines. To maximize the performance of any engine, it must be balanced and blueprinted to the exact tolerances that the factory should have adhered to in the first place. Four cylinder, V-8, American or import,

the performance of all engines is greatly improved by balancing and blueprinting. Dedicated enthusiasts and professional racers balance and blueprint their engines because the engines will produce more horsepower and torque, more efficiently use fuel, run cooler and last longer. In this book, expert engine builder and veteran author Mike Mavrigian explains and illustrates the most discriminating engine building techniques and perform detailed procedures, so the engine is perfectly balanced, matched, and optimized. Balancing and blueprinting is a time consuming and exacting process, but the investment in time pays off with superior performance. Through the process, you carefully measure, adjust, machine and fit each part together with precision tolerances, optimizing the design and maximizing performance. The book covers the block, crankshaft, connecting rods, pistons, cylinder heads, intake manifolds, camshaft, measuring tools and final assembly techniques. For more than 50 years, balancing and blueprinting has been an accepted and common practice for maximum performance.

'The Niki demonstrated every handling vice known to suspension engineers, plus some invented especially for this car.' 'If you needed a sudden burst of acceleration in the Goggomobil Dart, it was best to jump out and run.' It's true that cars are getting better and better. But sometimes, despite the designer's best intentions, instead of a peach we get a lemon. And while car enthusiasts (WHEELS magazine has a circulation of about 65,000 copies) will argue endlessly about what are the best cars, they'll argue even more ferociously about what are the WORST. LEMON! is a catalogue of 60 courageous disasters, from the 1958 Ford Edsel (by the 1960s 'edsel' was used in the US as a byword for failure, and the 23rd edition of the Webster Dictionary made it official) to the much-loved travesty, the P76 (when people took P76s in for warranty work they carried lists of the things that didn't need fixing). Bad design, appalling execution, ridiculous pretensions, ludicrous names- this detailed and hilarious look at automotive atrocities from the 1950s to the 1990s is a motoring Hall of Shame. Great photographs from car manufacturers' 'NEVER AGAIN!' Photo Archives will make this book impossible to resist. There are also plenty of top ten lists (top ten worst designs; top ten worst for handling etc) for those who suffer from list mania. The perfect Father's Day gift, LEMON! will also make a great stocking filler at Christmas. From Alfa to Zeta, from the tiny to the gargantuan and from the endearingly incompetent to the bombastically stupid, LEMON! will leave you not only laughing, but wondering how so many car makers got away with so much for so long.
