# Collaborative Leadership

# Building Relationships, Handling Conflict and Sharing Control

Routledge *We all live in an interconnected world and for business leaders the last decade has seen a dramatic rise in the speed and scale of this interdependence. But while increased connectivity is inevitable, increased collaboration is not. To succeed in today's environment, leaders need to be able to build relationships, handle conflict and to share control in order to promote effective collaboration where it is needed most. Archer and Cameron have been working in this field for over 10 years and were amongst the first business authors to define and explain Collaborative Leadership in their 2008 book. This 2nd edition draws on interviews, examples and additional cases studies of the new collaboration challenges that leaders face such as; working together to deal with the consequences of financial contagion in the Eurozone or elsewhere, responding to the growth in use of social networks by their staff and customers, and managing global supply chains to reach new growth markets. This fully revised, updated and re-structured text provides an easily accessible 'how-to' guide for leaders in today's interconnected world. It will give both experienced and aspiring leaders the techniques and confidence to manage complex collaborative relationships in a sustainable way. It also acts as a guide for leadership development professionals, coaches and consultants who have to build leadership and collaboration capability within organizations.*

# Transdisciplinary Engineering: A Paradigm Shift

# Proceedings of the 24th ISPE Inc. International Conference on Transdisciplinary Engineering, July 10-14, 2017

IOS Press *Concurrent Engineering is based on the concept that different phases of a product life cycle should be conducted concurrently and initiated as early as possible within the Product Creation Process (PCP). Its main goal is to increase the efficiency and effectiveness of the PCP and reduce errors in the later stages, and to incorporate considerations for the full lifecycle, through-life operations, and environmental issues of the product. It has become the substantive basic methodology in many industries, and the initial basic concepts have matured and become the foundation of many new ideas, methodologies, initiatives, approaches and tools. This book presents the proceedings of the 24th ISPE Inc. International Conference on Transdisciplinary (formerly: Concurrent) Engineering (TE 2017), held in Singapore, in July 2017. The 120 peer-reviewed papers in the book are divided into 16 sections: air transport and traffic operations and management; risk-aware supply chain intelligence; product innovation and marketing management; human factors in design; human engineering; design methods and tools; decision supporting tools and methods; concurrent engineering; knowledge-based engineering; collaborative engineering; engineering for sustainability; service design; digital manufacturing; design automation; artificial intelligence and data analytics; smart systems and the Internet of Things. # World Wildlife Crime Report 2020

# Trafficking in Protected Species

UN *The report presents the latest assessment of global trends in wildlife crime. It includes discussions on illicit rosewood, ivory, rhino horn, pangolin scales, live reptiles, tigers and other big cats, and European eel. Zoonotic diseases - those caused by pathogens that spread from animals to humans - represent up to 75% of all emerging infectious diseases. Trafficked wild species and the resulting products offered for human consumption, by definition, escape any hygiene or sanitary control, and therefore pose even greater risks of infection.*

# E-government in Europe

## Re-booting the State

Routledge *This book traces the development of e-government and its applications across Europe, exploring the effects of information and communication technology (ICTs) upon political action and processes. Explores a range of concepts and topics underpinning e-government in Europe: the degree to which e-government translates into genuine reform of government and public administration the dual role of the EU as both a provider of e-government through its own internal activities and also as a facilitator or aggregator in the way it seeks to engender change and promote its ethos in member states across the EU cyberterrorism and its use both by terrorists and governments to pursue political agendas. Featuring in-depth case studies on the progress of e-government in the UK, France, Germany, Denmark, The Netherlands, Portugal, Greece, Slovenia, Hungary, and Estonia. These case studies address the above issues, whilst at the same time highlighting commonality and diversity in practice and the paradox between top-down strategies and the effort to engage wider civil participation via e-government. e-Government in Europe will be of interest to students and scholars of public policy, politics, media and communication studies, computing and information and communications technologies and European studies.*

# Medinfo

IOS Press *A fundamental challenge for medical informatics is to develop and apply better ways of understanding how information technologies and methods can help support the best care for every patient every day given available medical knowledge and resources. In order to provide the most effective healthcare possible, the activities of teams of health professionals have to be coordinated through well-designed processes centered on the needs of patients. For information systems to be accepted and used in such an environment, they must balance standardization based on shared medical knowledge with the flexibility required for customization to the individual patient. Developing innovative approaches to design and build evidence-based careflow management systems is essential for providing the knowledge management infrastructure of health care organizations that seeks to increase performance in delivering high quality care services by efficiently exploiting available resources. Parallel challenges arise in the organization of research at the biological and clinical levels, where the focus on systematically organizing and supporting processes of scientific inquiry by novel informatics methods and databases are in their very early stages. These Proceedings of Medinfo 2004 demonstrate the base of knowledge medical informatics professionals will collectively draw upon in the years ahead to meet these challenges and realize opportunities.*

# Deep Learning

<u>MIT Press</u> *An introduction to a broad range of topics in deep learning, covering mathematical and conceptual background, deep learning techniques used in industry, and research perspectives. "Written by three experts in the field, Deep Learning is the only comprehensive book on the subject." —Elon Musk, cochair of OpenAI; cofounder and CEO of Tesla and SpaceX Deep learning is a form of machine learning that enables computers to learn from experience and understand the world in terms of a hierarchy of concepts. Because the computer gathers knowledge from experience, there is no need for a human computer operator to formally specify all the knowledge that the computer needs. The hierarchy of concepts allows the computer to learn complicated concepts by building them out of simpler ones; a graph of these hierarchies would be many layers deep. This book introduces a broad range of topics in deep learning. The text offers mathematical and conceptual background, covering relevant concepts in linear algebra, probability theory and information theory, numerical computation, and machine learning. It describes deep learning techniques used by practitioners in industry, including deep feedforward networks, regularization, optimization algorithms, convolutional networks, sequence modeling, and practical methodology; and it surveys such applications as natural language processing, speech recognition, computer vision, online recommendation systems, bioinformatics, and videogames. Finally, the book offers research perspectives, covering such theoretical topics as linear factor models, autoencoders, representation learning, structured probabilistic models, Monte Carlo methods, the partition function, approximate inference, and deep generative models. Deep Learning can be used by undergraduate or graduate students planning careers in either industry or research, and by software engineers who want to begin using deep learning in their products or platforms. A website offers supplementary material for both readers and instructors.*

# The Algorithmic Beauty of Plants

<u>Springer Science & Business Media</u> *Now available in an affordable softcover edition, this classic in Springer's acclaimed Virtual Laboratory series is the first comprehensive account of the computer simulation of plant development. 150 illustrations, one third of them in colour, vividly demonstrate the spectacular results of the algorithms used to model plant shapes and developmental processes. The latest in computer-generated images allow us to look at plants growing, self-replicating, responding to external factors and even mutating, without becoming entangled in the underlying mathematical formulae involved. The authors place particular emphasis on Lindenmayer systems - a notion conceived by one of the authors, Aristid Lindenmayer, and internationally recognised for its exceptional elegance in modelling biological phenomena. Nonetheless, the two authors take great care to present a survey of alternative methods for plant modelling.*

# Commemorating the Life and Work of Zdzisław Pawlak

<u>IOS Press</u> *"This book is dedicated to the memory of Zdzislaw Pawlak, a great scientist and a great human being. A short perspective on the life and work of Zdzislaw Pawlak is given at the beginning of this volume. During his lifetime, the research interests of Pawlak were rich and varied. His research ranged from his pioneering work on knowledge description systems and rough sets during the 1970s and 1980s to his work on the design of computers, information retrieval, modeling conflict analysis and negotiation, genetic grammars and molecular computing. One should also mention his active lifelong interest in painting, photography and poetry. During his lifetime, Pawlak nurtured worldwide interest in approximation, approximate reasoning and rough set theory and its applications. A compelling evidence of the scientific influence of Pawlak is the literature on rough sets that now includes over 4000 publications as well as the growth and maturity of the International Rough Set Society. Many papers that appear in this book reflect the profound influence of a number of research initiatives by Pawlak in a whole range of research areas. It can also be inferred from the papers included in this volume, that research concerning the foundations and applications of rough sets remains a vivid and still growing research area worldwide. During the past 35 years since the introduction of knowledge description systems in the 1970s by Pawlak, the theory and applications of rough sets as well as the advent of approximation spaces to facilitate perception and observation concerning classes of objects has developed in a truly impressive way.."*

# Kondratieff Waves, Warfare and World Security

<u>IOS Press</u> *"Considerable progress has been made in understanding the underlying mechanisms driving the long-wave behavior of the world socioeconomic development. In spite of this progress one recognizes that many aspects related with these underlying driving forces remained unsolved. One of these aspects endured, perhaps as the most controversial one: the close relationship between K-waves and the outbreak of major wars. Social scientists and politicians are well acquainted with the fact that chance events have been responsible for the outbreak of wars and their course and outcome. Two main trends are now acknowledged: the increasing*

*recognition of the existence of some cyclical patterns of warfare involving the core of the world system, and a shift toward newly evolving patterns involving non-state actors and asymmetric warfare. We may tentatively agree that wars are not merely the result of blind social and political forces, but patterned according to long socioeconomic cycles and the result of deep and general laws underlying the co-evolutionary unfolding of the world system. In the first part of this book, the reader will find a mix of contributions dealing with new visions or revisions of the concept of long waves considered from very different perspectives related to their unfolding. Those contributions discussing the issue of K-waves and their relation with military conflicts objectively, following old and / or new conceptualizations of the phenomenon, were selected to form the books second part. Finally those contributions with strong emphasis on the analysis of future scenarios, related or not related with warfare and / or world security compose the body of the third part."*

# High Quality Care for All

# NHS Next Stage Review Final Report

The Stationery Office *This review incorporates the views and visions of 2,000 clinicians and other health and social care professionals from every NHS region in England, and has been developed in discussion with patients, carers and the general public. The changes proposed are locally-led, patient-centred and clinically driven. Chapter 2 identifies the challenges facing the NHS in the 21st century: ever higher expectations; demand driven by demographics as people live longer; health in an age of information and connectivity; the changing nature of disease; advances in treatment; a changing health workplace. Chapter 3 outlines the proposals to deliver high quality care for patients and the public, with an emphasis on helping people to stay healthy, empowering patients, providing the most effective treatments, and keeping patients as safe as possible in healthcare environments. The importance of quality in all aspects of the NHS is reinforced in chapter 4, and must be understood from the perspective of the patient's safety, experience in care received and the effectiveness of that care. Best practice will be widely promoted, with a central role for the National Institute for Health and Clinical Excellence (NICE) in expanding national standards. This will bring clarity to the high standards expected and quality performance will be measured and published. The review outlines the need to put frontline staff in control of this drive for quality (chapter 5), with greater freedom to use their expertise and skill and decision-making to find innovative ways to improve care for patients. Clinical and managerial leadership skills at the local level need further development, and all levels of staff will receive support through education and training (chapter 6). The review recommends the introduction of an NHS Constitution (chapter 7). The final chapter sets out the means of implementation.*

# The Future of Productivity

OECD Publishing *This book addresses the rising productivity gap between the global frontier and other firms, and identifies a number of structural impediments constraining business start-ups, knowledge diffusion and resource allocation (such as barriers to up-scaling and relatively high rates of skill mismatch).*
