Urbanization and Climate Co-Benefits Implementation of win-win interventions in cities [Taylor & Francis](#) Urban areas are increasingly contributing to climate change while also suffering many of its impacts. Moreover, many cities, particularly in developing countries, continue to struggle to provide services, infrastructure and socio-economic opportunities. How do we achieve the global goals on climate change and also make room for allowing global urban development? Increasing levels of awareness and engagement on climate change at the local level, coupled with recent global agreements on climate and development goals, as well as the New Urban Agenda emerging from Habitat III, present an unprecedented opportunity to radically rethink how we develop and manage our cities. Urbanization and Climate Co-Benefits examines the main opportunities and challenges to the implementation of a co-benefits approach in urban areas. Drawing on the results of empirical research carried out in Brazil, China, Indonesia, South Africa, India and Japan, the book is divided into two parts. The first part uses a common framework to analyse co-benefits across the urban sectors. The second part examines the tools and legal and governance perspectives at the local and international level that can help in planning for co-benefits. This book will be of great interest to students, practitioners and scholars of urban studies, climate/development policy and environmental studies. **Surveys In Social Research** [Routledge](#) David de Vaus' classic text Surveys in Social

Research provides clear advice on how to plan, conduct and analyse social surveys. It emphasises the links between theory and research, the logic and interpretation of statistics and the practices of social research. This sixth edition has been completely revised and updated, and contains new examples, data and extensive lists of web resources. As well as explaining how to conduct good surveys, de Vaus shows how to become a critical consumer of research. He argues that the logic of surveys and statistics is simply an extension of the logic we use in everyday life; analysis, however, requires creativity and imagination rather than the application of sterile mechanical procedures. The prime goal of research should be to gain accurate understanding and, as a researcher, use methods and techniques which enhance understanding. De Vaus advocates researchers use the method, rather than letting the method use you. *Surveys in Social Research* is essential reading for students and researchers working with surveys. It assumes no background in statistical analysis, and gives you the tools you need to come to grips with this often challenging field of work. *Practical Studies in E-Government Best Practices from Around the World* [Springer Science & Business Media](#) Information and communication technology (ICT) is permeating all aspects of service management; in the public sector, ICT is improving the capacity of government agencies to provide a wide array of innovative services that benefit citizens. E-Government is emerging as a multidisciplinary field of research based initially on empirical insights from practice. Efforts to theoretically anchor the field have opened perspectives from multiple research domains, as demonstrated in *Practical Studies in E-Government*. In this volume, the editors and contributors consider the evolution of the e-government field from both practical and research perspectives. Featuring in-depth case studies of initiatives in eight countries, the book deals with such technology-oriented issues as interoperability, prototyping, data quality, and advanced interfaces, and management-oriented issues as e-procurement, e-identification, election results verification, and information privacy. The book features best practices, tools for measuring and improving performance, and analytical methods for researchers. *DIY Guide: How to publish your own ebook* [Password Publishing](#) *Transdisciplinary Engineering for Complex Socio-technical Systems - Real-life Applications Proceedings of the 27th ISTE International Conference on Transdisciplinary Engineering, July 1 - July 10, 2020* [IOS Press](#) Transdisciplinary engineering transcends other inter- and multi-disciplinary ways of working, such as Concurrent Engineering (CE). In particular, transdisciplinary processes are aimed at solving complex, ill-defined problems, or problems for which the solution is not immediately obvious. No one discipline or single person can provide sufficient knowledge to solve such problems, so collaboration is essential. This book presents the proceedings of the 27th ISTE International Conference on Transdisciplinary Engineering, organized by Warsaw University of Technology, Poland, from 1-10 July 2020. ISTE2020 was the first of this conference series to be held virtually, due to the COVID-19 restrictions. Entitled *Transdisciplinary Engineering for Complex Socio-technical Systems - Real-life Applications*, the book includes 71 peer-reviewed papers presented at the conference by authors from 17 countries. These range from theoretical and conceptual to strongly pragmatic and addressing industrial best practice and, together with invited talks, they have been collated into 9 sections: Transdisciplinary Engineering (7 papers); Transdisciplinary Engineering Education (4 papers); Industry 4.0, Methods and Tools (7 papers); Human-centered Design (8 papers); Methods and Tools for Design and Production (14 papers); Product and Process Development (9 papers); Knowledge and Data Modeling (13 papers); Business Process and Supply Chain Management (7 papers); and Sustainability (2 papers). The book provides an overview of new approaches, methods, tools and their applications, as well as current research and development, and will be of interest to researchers, design practitioners, and educators working in the field. *Document Analysis Guide for for MicroStrategy 9.2.1m* [MicroStrategy](#) *Digital Accounting The Effects of the Internet and ERP on Accounting* [IGI Global](#) This volume provides a foundation in digital accounting by covering such fundamental topics as accounting software, XBRL (eXtensible Business Reporting Language), and EDI. The effects of the Internet and ERP on accounting are classified and presented for each accounting cycle, along with a comprehensive discussion of online controls. *Learning to Use Office 2000 for New CLAIT & CLAIT Plus* [Heinemann](#) Covers the skills needed for CLAIT and CLAIT Plus. This work gives students the skills they need to make the most of Office 2000. It includes assignments in every chapter that cover Word, Excel and Access. *Handbook on Constructing Composite Indicators: Methodology and User Guide* [OECD Publishing](#) A guide for constructing and using composite indicators for policy makers, academics, the media and other interested parties. In particular, this handbook is concerned with indicators which compare and rank country performance. *Methodological Quality of Interventions in Psychology* [Frontiers Media SA](#) Evaluations of intervention programs seek to present high-quality design, measures and data to assess their merit and worth. While evaluations differ in their purpose, theoretical framework and methodology, their collective aim is to obtain relevant and meaningful information to inform practice, research, and policy. As such, evaluation findings serve to build a body of knowledge on effective approaches to promote designated psychological outcomes, critical to an individual's overall health and well-being. However, as examined in this e-book, methodological weaknesses directly limit the potential of evaluations of intervention programs. As discussed by Chacón-Moscoso and Sanduvete-Chaves, methodological weaknesses can be attributed to how to define and measure methodological quality and the contextual dependency of instruments designed to measure this quality. In response, this e-book provides a collection of studies on methodological approaches to promote the quality of psychological interventions. Specifically, 10 original works published in the *Research Topic Methodological Quality of Interventions in Psychology* are included. The papers are organized into two chapters. Concretely, Chapter 1 includes studies pertaining to methodological approaches to enhance the quality of psychological intervention, being context independent solutions. Furthermore, Chapter 2 presents original work in different areas (health, education, sport and social welfare) where methodological quality has been better assessed. Collectively, the papers in this e-book serve to expand the awareness of practitioners and researchers interested in psychological interventions of the critical role of methodological quality in this work. and International Relations [SAGE](#) The [SAGE Handbook of Research Methods in Political Science and International Relations](#) offers a comprehensive overview of the field and its research processes through the empirical and research scholarship of leading international authors. The book is structured along the lines of applied research in the discipline: from formulating good research questions and designing a good research project, to various modes of theoretical argumentation, through conceptualization, to empirical measurement and analysis. Each chapter offers new approaches and builds upon existing methods. Through its seven parts, undergraduate and graduate students, researchers and practicing academics, will be guided through the design, methods and analysis of issues in Political Science and International Relations discipline: Part One: Formulating Good Research Questions and Designing Good Research Projects Part Two: Methods of Theoretical Argumentation Part Three: Conceptualization & Measurement Part Four: Large-Scale Data Collection & Representation Methods Part Five: Quantitative-Empirical Methods Part Six: Qualitative & "Mixed" Methods Part Seven: EITM & EMTI Quantitative Methods in Tourism A Handbook [Channel View Publications](#) In this revised second edition, Baggio and Klobas build upon the work of their previous volume, offering a presentation of quantitative research methods for tourism researchers. This accessible and rigorous guide goes beyond the approaches usually covered in introductory textbooks on quantitative methods to consider useful techniques for statistical inquiry into tourism matters of all but the most econometrically complex kind. The first part of the book concerns common issues in statistical analysis of data and the most widely-used techniques, while the second part describes and discusses several newer and less common approaches to data analysis that are valuable for tourism researchers and analysts. Updates to the second edition include: • a new chapter on "Big Data" • consideration of data screening and cleaning • the use of similarity and diversity indexes for comparing samples • observations about the partial least squares (PLS) approach to path modelling • a new section on multi-group structural equation modelling • a new section on common method variance and its treatment • revised and updated section on software • fully updated references and examples
