The American Psychiatric Association Practice Guideline for the Pharmacological Treatment of

Patients With Alcohol Use Disorder

American Psychiatric Pub Alcohol use disorder (AUD) is a major public health problem in the United States. The estimated 12-month and lifetime prevalence values for AUD are 13.9% and 29.1%, respectively, with approximately half of individuals with lifetime AUD having a severe disorder. AUD and its sequelae also account for significant excess mortality and cost the United States more than \$200 billion annually. Despite its high prevalence and numerous negative consequences, AUD remains undertreated. In fact, fewer than 1 in 10 individuals in the United States with a 12-month diagnosis of AUD receive any treatment. Nevertheless, effective and evidence-based interventions are available, and treatment is associated with reductions in the risk of relapse and AUD-associated mortality. The American Psychiatric Association Practice Guideline for the Pharmacological Treatment of Patients With Alcohol Use Disorder seeks to reduce these substantial psychosocial and public health consequences of AUD for millions of affected individuals. The guideline focuses specifically on evidence-based pharmacological treatments for AUD in outpatient settings and includes additional information on assessment and treatment planning, which are an integral part of using pharmacotherapy to treat AUD. In addition to reviewing the available evidence on the use of AUD pharmacotherapy, the guideline offers clear, concise, and actionable recommendation statements, each of which is given a rating that reflects the level of confidence that potential benefits of an intervention outweigh potential harms. The guideline provides guidance on implementing these recommendations into clinical practice, with the goal of improving quality of care and treatment outcomes of AUD.

The Future of Nursing

Leading Change, Advancing Health

National Academies Press **The Future of Nursing** explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

You need all the resources you can get to make sure you are prepared! In addition to the exam being very difficult, you are likely a busy professional with very minimal free time. I've always had a hard time staying focused while studying from large review article type study guides and have squandered hours reading while retaining very little. This book is intended to be a crash course/cheat sheet overview of the most highly testable material. I wanted to remember the really

important stuff, because I know it is impossible to know every minute detail. BCPS Bullets, the Condensed BCPS Study Guide will help prepare you for the exam as well as help you maximize your study time. We covered over 100+ disease states straight from the BCPS content outline provided by BPS, and included important pearls for each condition including assessments, risk factors, most commonly used drugs of choice, must know adverse effects, miscellaneous clinical pearls, notorious drug interactions, warnings and precautions, and of course, relevant labs. I wanted to cover each disease state in 1-2 pages to try to ensure you are reviewing the most relevant content. We did go over 2 pages on some disease states, but we did our best to keep the information concise and critical for you to know in your preparation to becoming a Board Certified Pharmacotherapy Specialist. The book is over 300+ pages, but it is in bullet point format and very easy to digest multiple disease states at a sitting. There is also some white around the margins to take additional notes or highlight essential information to remember. As many of you are aware from the content outline, the BCPS exam is not all clinical. In addition to the disease states on the BCPS content outline, we've also included sections on biostatistics as well as important regulatory issues. I can assure you that there is no doubt this book will help in your preparation to becoming a BCPS pharmacist! The Board Certified Pharmacotherapy Specialist (BCPS) is a designation from the Board of Pharmacy Specialties. The contents within this study guide are not affiliated or endorsed by the Board of Pharmacy Specialties.
