COMPUTATIONAL SCIENCE — ICCS 2004

4TH INTERNATIONAL CONFERENCE, KRAKÓW, POLAND, JUNE 6-9, 2004, PROCEEDINGS, PART III

Springer *The International Conference on Computational Science (ICCS 2004) held in Kraków, Poland, June 6–9, 2004, was a follow-up to the highly successful ICCS 2003 held at two locations, in Melbourne, Australia and St. Petersburg, Russia; ICCS 2002 in Amsterdam, The Netherlands; and ICCS 2001 in San Francisco, USA. As computational science is still evolving in its quest for subjects of investigation and efficient methods, ICCS 2004 was devised as a forum for scientists from mathematics and computer science, as the basic computing disciplines and application areas, interested in advanced computational methods for physics, chemistry, life sciences, engineering, arts and humanities, as well as computer system vendors and software developers. The main objective of this conference was to discuss problems and solutions in all areas, to identify new issues, to shape future directions of research, and to help users apply various advanced computational techniques. The event harvested recent developments in computational grids and next generation computing systems, tools, advanced numerical methods, data-driven systems, and novel application fields, such as complex systems, finance, econo-physics and population evolution.*

THE STATE OF WORKING AMERICA, 12TH EDITION

Cornell University Press Since 1988, *The State of Working America* has provided a comprehensive answer to a question newly in vogue in this age of Occupy Wall Street: To what extent has overall economic growth translated into rising living standards for the vast majority of American workers and their families? In the 12th edition, Lawrence Mishel, Josh Bivens, Elise Gould, and Heidi Shierholz analyze a trove of data on income, jobs, mobility, poverty, wages, and wealth to demonstrate that rising economic inequality over the past three decades has decoupled overall economic growth from growth in the living standards of the vast majority. The new edition of *The State of Working America* also expands on this analysis of American living standards, most notably by placing the Great Recession in historical context. The severe economic downturn that began in December 2007 came on the heels of a historically weak recovery following the 2001 recession, a recovery that saw many measures of living standards stagnate. The authors view the past decade as "lost" in terms of living standards growth, and warn that millions of American households face another decade of lost opportunity. Especially troubling, the authors stress, is that while overall economic performance in the decades before the Great Recession was more than sufficient to broadly raise living standards, broad-based growth was blocked by rising inequality driven largely by policy choices. A determinedly data-driven narrative, *The State of Working America* remains the most comprehensive resource about the economic experience of working Americans.

INTERNATIONAL HANDBOOK OF RESEARCH IN PROFESSIONAL AND PRACTICE-BASED LEARNING

Springer *The International Handbook of Research in Professional and Practice-based Learning* discusses what constitutes professionalism, examines the concepts and practices of professional and practice-based learning, including associated research traditions and educational provisions. It also explores professional learning in

institutions of higher and vocational education as well the practice settings where professionals work and learn, focusing on both initial and ongoing development and how that learning is assessed. The Handbook features research from expert contributors in education, studies of the professions, and accounts of research methodologies from a range of informing disciplines. It is organized in two parts. The first part sets out conceptions of professionalism at work, how professions, work and learning can be understood, and examines the kinds of institutional practices organized for developing occupational capacities. The second part focuses on procedural issues associated with learning for and through professional practice, and how assessment of professional capacities might progress. The key premise of this Handbook is that during both initial and ongoing professional development, individual learning processes are influenced and shaped through their professional environment and practices. Moreover, in turn, the practice and processes of learning through practice are shaped by their development, all of which are required to be understood through a range of research orientations, methods and findings. This Handbook will appeal to academics working in fields of professional practice, including those who are concerned about developing these capacities in their students. In addition, students and research students will also find this Handbook a key reference resource to the field.

This book is a rare explanation of common construction management activities from a financial point of view. While the practical side of the industry is illustrated here with case studies, the authors also take the time to build up an understanding of balance sheets and P&L accounts before explaining how common tasks like estimating or valuation work from this perspective. Readers of this book will not only learn how to carry out the tasks of a construction cost manager, quantity surveyor or estimator, they will also understand the financial logic behind them, and the motivations that drive senior management. FORGOTTEN AMERICANS

AN ECONOMIC AGENDA FOR A DIVIDED NATION

Yale University Press A sobering account of a disenfranchised American working class and important policy solutions to the nation's economic inequalities. One of the country's leading scholars on economics and social policy, Isabel Sawhill addresses the enormous divisions in American society—economic, cultural, and political—and what might be done to bridge them. Widening inequality and the loss of jobs to trade and technology has left a significant portion of the American workforce disenfranchised and skeptical of governments and corporations alike. And yet both have a role to play in improving the country for all. Sawhill argues for a policy agenda based on mainstream values, such as family, education, and work. While many have lost faith in government programs designed to help them, there are still trusted institutions on both the local and federal level that can deliver better job opportunities and higher wages to those who have been left behind. At the same time, the private sector needs to reexamine how it trains and rewards employees. This book provides a clear-headed and middle-way path to a better-functioning society in which personal responsibility is honored and inclusive capitalism and more broadly shared growth are once more the norm.

THE PSYCHOLOGY AND MANAGEMENT OF PROJECT TEAMS

Oxford University Press, USA *Even though project-management researchers have become increasingly interested in factors that may have an impact on project-management effectiveness, their efforts fall short of addressing the "human factor." And, unfortunately, many project-management scholars are largely unaware of the I/O psychology literature--relying, for example, on outdated models of motivation and team development. On the other side, I/O psychologists who research groups and teams often ignore the contextual influences--such as business sector, project type, placement in the organizational hierarchy, and project phase and maturity--that have a crucial impact on how a project will unfold. In this volume, a cross-disciplinary set of editors will bring together perspectives from leading I/O psychology and project-management scholars.*

ARAB HUMAN DEVELOPMENT REPORT 2016

YOUTH AND THE PROSPECTS FOR HUMAN DEVELOPMENT IN A CHANGING REALITY

United Nations *This report addresses the development challenges facing young people in the Arab region. The current young generation is the largest this region has had over the past 50 years, making up 30% of its population. In light of the youth-led movements during and after the 2011 uprisings, the report argues for a renewed policy focus on youth development in the region. It deals with the pillars of human development (income, education and health) with the attainment, achievement and equitable distribution of education, and with the challenges of finding stable and decent jobs. With protracted conflict in several Arab countries, young Arabs have become victims or perpetrators of violence, challenged by difficulties of mobility and migration. AHDR 2016 aims to engage youth in building a better future.*

DECOLONIZING METHODOLOGIES

RESEARCH AND INDIGENOUS PEOPLES

Bloomsbury Publishing 'A landmark in the process of decolonizing imperial Western knowledge.' Walter Mignolo, Duke University To the colonized, the term 'research' is conflated with European colonialism; the ways in which academic research has been implicated in the throes of imperialism remains a painful memory. This essential volume explores intersections of imperialism and research - specifically, the ways in which imperialism is embedded in disciplines of knowledge and tradition as 'regimes of truth.' Concepts such as 'discovery' and 'claiming' are discussed and an argument presented that the decolonization of research methods will help to reclaim control over indigenous ways of knowing and being. Now in its eagerly awaited second edition, this bestselling book has been substantially revised, with new case-studies and examples and important additions on new indigenous literature, the role of research in indigenous struggles for social justice, which brings this essential volume urgently up-to-date.
