# AIDS, Poverty, and Hunger

## Challenges and Responses

Intl Food Policy Res Inst *"The global AIDS epidemic has caused over 25 million deaths since 1981, and there is no end in sight. It is a multidimensional, phased, long-wave crisis with impacts that will be felt for decades to come. Attempts to defeat the epidemic are conventionally grounded in the three core pillars of AIDS policy: prevention, treatment and care, and mitigation. But there is also an urgent need for a deeper understanding of the integral role that food and nutrition can and should play, and a corresponding urgency to use that understanding to improve responses at all levels. The 18 essays in AIDS, Poverty, and Hunger: Challenges and Responses contribute to such an understanding by examining the impacts of HIV and AIDS on labor markets and wages, household income and consumption dynamics, and the agricultural sector as a whole; by studying the ways in which households respond to prime-age illness, death, and food insecurity; and by exploring the implications of local responses for the roles that national and international actors must play in addressing the AIDS-hunger nexus. This book creates an opportunity for development professionals to build the conceptual links lacking in current multisectoral frameworks, assess impacts and costs, propose indicators and monitoring systems, and design appropriate food- and nutrition-related interventions and policies."*

## Consolidated Guideline on Sexual and Reproductive Health and Rights of Women Living with HIV

World Health Organization *The starting point for this guideline is the point at which a woman has learnt that she is living with HIV, and it therefore covers key issues for providing comprehensive sexual and reproductive health and rights-related services and support for women living with HIV. As women living with HIV face unique challenges and human rights violations related to their sexuality and reproduction within their families and communities, as well as from the health-care institutions where they seek care, particular emphasis is placed on the creation of an enabling environment to support more effective health interventions and better health outcomes. This guideline is meant to help countries to more effectively and efficiently plan, develop and monitor programs and services that promote gender equality and human rights and hence are more acceptable and appropriate for women living with HIV, taking into account the national and local epidemiological context. It discusses implementation issues that health interventions and service delivery must address to achieve gender equality and support human rights.*

## Health and Illness in the World's Cultures Topics - Volume 1; Cultures -

*Springer Science & Business Media* Medical practitioners and the ordinary citizen are becoming more aware that we need to understand cultural variation in medical belief and practice. The more we know how health and disease are managed in different cultures, the more we can recognize what is "culture bound" in our own medical belief and practice. The *Encyclopedia of Medical Anthropology* is unique because it is the first reference work to describe the cultural practices relevant to health in the world's cultures and to provide an overview of important topics in medical anthropology. No other single reference work comes close to matching the depth and breadth of information on the varying cultural background of health and illness around the world. More than 100 experts - anthropologists and other social scientists - have contributed their firsthand experience of medical cultures from around the world.

## The HIV Pandemic

### Local and global implications

*OUP Oxford* As we approach the 25th anniversary of the first recognition of HIV/AIDS in 1981, this book reflects on the international impact of the disease. It has persistently remained a global issue, with more than 50 million people worldwide estimated to have been infected since that date. This ambitious book, written by 165 authors from 30 countries, offers a multi-country comparative study that examines how the response to the common, global threat of HIV is shaped by the history, culture, institutions and health systems of the individual countries affected. Increasingly the shift of health systems has been from prevention only as the main containment strategy, to a strategy that includes scaling up HIV treatment, and care and prevention services, including antiretroviral therapy. Thus, all parts of the health system must be involved; policy makers, healthcare professionals and users of the services have been forced to think differently about how services are financed, how resources are allocated, how systems are structured and organized, how services are delivered to patients, and how the resulting activity is monitored and evaluated in order to improve the effectiveness, efficiency, equity and acceptability of the response. This book is unique in attempting to describe and assess a range of responses across the globe by situating them within the characteristics of each country and its health system. Most chapters combine a health policy expert with an

*HIV specialist, allowing both a 'top down' health system approach and a 'bottom up' HIV-specific perspective. There are thematic and analytical sections, which provide an overview and some suggestions for solutions to the most serious outstanding issues, and chapters which analyse specific country and organisational responses. There is no perfect health system, but the evidence provided here allows the sharing of knowledge, and a opportunity to assess the impact and reactions, to an epidemic that must be considered a long term issue.*

## Biopsychosocial Perspectives and Practices for Addressing Communicable and Non-Communicable Diseases

*IGI Global* While there are a number of clinical practices for treating a variety of diseases, there is an urgent need to integrate bio-psychosocial perspectives and practices in order to promote comprehensive healthcare. Current research reports that diseases such as HIV/AIDS, malaria, diabetes, cardiovascular diseases, and heart diseases are a growing threat to the health and quality of life of individuals across the globe. Considering that nearly all these diseases are directly related to the lifestyle of an individual, prevention and intervention should be devised to address psychological, emotional, social, and spiritual factors. *Biopsychosocial Perspectives and Practices for Addressing Communicable and Non-Communicable Diseases* is a collection of theoretical research that promotes good health and quality of life through psychosocial interventions to address psychosocial problems facing individuals such as discrimination and stigma, stress, depression, alcohol and drug abuse, smoking, lack of physical activity, and many other socio-economic factors. While highlighting topics including mental health, traditional healthcare, and global health, this book is ideally designed for therapists, counselors, psychologists, medical professionals, hospital administrators, researchers, academicians, and students in fields that include public health, nursing, community-based healthcare, health psychology, HIV/AIDS education, human movement education, and sport psychology.

# Charting the course of education and HIV

*UNESCO More than three decades after the identification of the virus, HIV continues to affect millions of people worldwide. Much progress has been made and infection rates are down in a number of countries. From the beginning the education sector has played a central role in responding to HIV, though its role and the contribution of school-based HIV education has been the subject of much debate. This book explores the major debates and provides an overview of how the role of the education sector and approaches to HIV education have evolved, what has been learned, emerging challenges and opportunities, and proposes a way forward for the education sector to contribute to the prevention of new infections, treatment and care, and reduce stigma and discrimination. The Education on the Move series seeks to bring research knowledge produced by various academic disciplines and within various organizations to those who can shape educational policies and drive reforms.*

## Comprehensive Textbook of AIDS Psychiatry

### A Paradigm for Integrated Care

*Oxford University Press The Comprehensive Textbook of AIDS Psychiatry: A Paradigm for Integrated Care is the first book to provide insight into the interface between the psychiatric, medical, and social dimensions of HIV and AIDS and the need for a compassionate, integrated approach to the HIV pandemic with an emphasis on humanizing and destigmatizing HIV. Drawing from the expertise of 135 contributors in clinical and evidence-based medicine, the book provides information on the prevalence, incidence, medical and psychiatric aspects of HIV, as well as on the prevention and care of persons with HIV/AIDS.*

## A Clinical Guide to Pediatric HIV Bridging the Gaps Between

# Research and Practice

*Springer* This book examines the impact of pediatric HIV on children, adolescents, and their families. Beginning with an overview of pediatric HIV epidemiology, it traces the medical, psychological, and social dimensions of HIV through the trajectory of childhood and youth. It examines the latest research on a wide range of topics, including treatment adherence, cultural, legal, and ethical issues, and HIV stigma and its reduction. Chapters offer expert recommendations for clinicians working with children with HIV as well as researchers studying pediatric HIV. In addition, the book also discusses daily concerns associated with pediatric HIV, such as disease management, coping, access to services, risk prevention, and health promotion. Topics featured in this book include: The impact of pediatric HIV on families. Psychosocial considerations for children and adolescents with HIV. HIV prevention and intervention in the school setting. HIV disclosure in pediatric populations. How to design effective evidence-based HIV risk-reduction programs for adolescents. A Clinical Guide to Pediatric HIV is a must-have resource for researchers, clinicians, and graduate students in child and school psychology, social work, and public health as well as pediatric medicine, nursing, epidemiology, anthropology, and other related disciplines.

# Innovations in HIV Prevention Research and Practice through Community Engagement

*Springer* HIV continues to be a profound challenge facing communities nationally and internationally. Until a vaccine or a cure is found, prevention remains a most crucial line of defense. However, the successes made to reduce exposure and transmission have not benefited all communities equally. HIV continues to affect vulnerable communities, and HIV-related health disparities are growing. The work documented in *Innovations in HIV Prevention Research and Practice through Community Engagement* spotlights the effectiveness of community involvement to reduce HIV infections in the United States. This timely resource introduces the concepts of community engagement, partnership, and community-based participatory research (CBPR). Contributors provide detailed examples of these concepts in which diverse research partners blend their unique insights and skills to arrive at an authentic understanding of phenomena and inform the translation of best practices and processes to enhance equity in HIV prevention and treatment. Equitable interactive collaboration is central to these efforts, in which community members and representatives from organizations, the scientific and medical sectors, and other relevant agencies nurture long-term health improvement through sustained teamwork. Challenges and barriers to effective engagement are identified, as are characteristics of successful partnerships. Included in the book: Details of a

*multigenerational HIV prevention intervention in a rural southeastern community. The challenges and successes of developing, implementing, and evaluating an intervention for higher-risk predominately heterosexual black men in college. The history of gay community involvement in HIV prevention and its contributions to the theory and current practice of engagement. Next steps in the integration of HIV-related policy change and research. Community engagement within American Indian communities. Keys to sustaining a CBPR partnership to prevent HIV within ethnic, sexual, and gender minority communities. Innovations in HIV Prevention Research and Practice through Community Engagement offers researchers and practitioners in public health, community health, and medicine guidance on community engagement that is both inspiring and realistic. "Community engagement and knowledge continue to be essential to prevent HIV infections. This book is a compilation of the state-of-the-science of engagement and delves deeper into the meaning and utilization of community-based participatory research, with implications that reach beyond the HIV epidemic to public health and medicine in general." - Laura C. Leviton, PhD, Senior Advisor for Evaluation, Robert Wood Johnson Foundation, Princeton, NJ*

## HIV Prevention With Latinos

# Theory, Research, and Practice

Oxford University Press According to the 2010 U.S. Census, Latinos now comprise 16% of the general population as they continue to be one of the fastest-growing populations in the United States. However, according to recent CDC data, Latinos also account for a disproportionately high number of total new AIDS cases. Rates of AIDS among U.S. Latinos are second only to African Americans, and about 3.5-times higher than for non-Hispanic Whites. Vulnerability to HIV/AIDS increases with ethnic and racial minority status that is so often conflated with socioeconomic status. Additional factors, such as gender, sexual orientation, and stigma, also increase vulnerability to HIV/AIDS and require us to think comprehensively about the unique structural-environmental, social and cultural factors that frame risk for HIV for U.S. Latinos. This book, written by leading authorities on theory, research, and practice in preventing HIV with diverse Latino populations and communities, responds to the diminishing returns of the behavioral model of HIV risk by deconstructing the many social ecological contexts of risk within the Latino experience. Each of the chapters explores the most innovative thinking and original research on the prevention of HIV for a comprehensive span of subgroups and situations, including: preventing HIV in LGBT Latinos through community involvement and AIDS activism; in migrant laborers by scaling up community and cultural resources; in adolescent Latinas by facilitating communication with their mothers about sex; by decreasing the racism, homophobia, and poverty often experienced by Latino men who have sex with men; in transgender Latinas by decreasing familial, peer, and social rejection, and by providing structures of care at local, state, and national levels; and in Latinas by improving their economic autonomy as well as improving gender-equity ideologies among men. This is a timely and urgently needed effort by the best researchers and interventionists in the field today. Latino-serving agencies and professionals, as well as the growing number of Latino-focused HIV prevention researchers, graduate students, and faculty, will find this an invaluable resource, reference, and guide.

## Billions of Entrepreneurs

# How China and India Are Reshaping Their Futures and Yours

Harvard Business Press China and India are home to one-third of the world's population. And they're undergoing social and economic revolutions that are capturing the best minds--and money--of Western business. In *Billions of Entrepreneurs*, Tarun Khanna examines the entrepreneurial forces driving China's and India's trajectories of development. He shows where these trajectories overlap and complement one another--and where they diverge and compete. He also reveals how Western companies can participate in this development. Through intriguing comparisons, the author probes important differences between China and India in

areas such as information and transparency, the roles of capital markets and talent, public and private property rights, social constraints on market forces, attitudes toward expatriates abroad and foreigners at home, entrepreneurial and corporate opportunities, and the importance of urban and rural communities. He explains how these differences will influence China's and India's future development, what the two countries can learn from each other, and how they will ultimately reshape business, politics, and society in the world around them. Engaging and incisive, this book is a critical resource for anyone working in China or India or planning to do business in these two countries.

## Scaling Up Treatment for the Global

# AIDS Pandemic

## Challenges and Opportunities

*National Academies Press* An estimated forty million people carry the human immunodeficiency virus (HIV), and five million more become newly infected annually. In recent years, many HIV-infected patients in wealthy nations have enjoyed significantly longer, good-quality lives as a result of antiretroviral therapy (ART). However, most infected individuals live in the poorest regions of the world, where ART is virtually nonexistent. The consequent death toll in these regions—especially sub-Saharan Africa—is begetting economic and social collapse. To inform the multiple efforts underway to deploy antiretroviral drugs in resource-poor settings, the Institute of Medicine committee was asked to conduct an independent review and assessment of rapid scale-up ART programs. It was also asked to identify the components of effective implementation programs. At the heart of the committee's report lie five imperatives: Immediately introduce and scale up ART programs in resource-poor settings. Devise strategies to ensure high levels of patient adherence to complicated treatment regimens. Rapidly address human-resource shortages to avoid the failure of program implementation. Continuously monitor and evaluate the programs to form the most effective guidelines and treatment regimens for each population. Prepare to sustain ART for decades.

## Ageing and Sexualities

## Interdisciplinary Perspectives

*Taylor & Francis* This book showcases developments in theory, research and practice regarding sexuality and ageing, considering the differences as well as similarities between and among ageing heterosexual and LGBT older people. Identifying the questions central to future social scientific research on ageing and sexuality, it focuses on the important, emerging dimensions of sexuality and ageing: embodiment, the diversification of the ageing context and the intersections of care and sexuality. With attention to the different forms of sexualities, particularly at their intersection with gender, this volume explores the importance of spatial and relational contexts, whether individual, residential or virtual, with authors offering studies of online dating, sexuality in the context of residential care and the relationship between sexuality, legal frameworks and social policy. Interdisciplinary in scope and offering the latest research from scholars in the UK, Australasia and Africa, *Ageing and Sexualities* constitutes an integrated approach to the conceptual and practical challenges of understanding the interplay of ageing and sexuality in contemporary society. As such, it will appeal to scholars from a variety of disciplinary backgrounds, including sociology, cultural studies, socio-legal studies, social gerontology, psychology, medicine and health care.

# Preparing for the Future of HIV/AIDS in Africa

## A Shared Responsibility

*National Academies Press HIV/AIDS is a catastrophe globally but nowhere more so than in sub-Saharan Africa, which in 2008 accounted for 67 percent of cases worldwide and 91 percent of new infections. The Institute of Medicine recommends that the United States and African nations move toward a strategy of shared responsibility such that these nations are empowered to take ownership of their HIV/AIDS problem and work to solve it.*

## Social Determinants of Health and Knowledge About Hiv/Aids Transmission Among Adolescents

*iUniverse Godwin C. Osakwe draws on his academic knowledge and painstaking research to determine if there's a link between knowledge and transmission of HIV/AIDS among youths in this important study. The author, who holds a doctorate degree in public health and a business management degree, shares broad information and engages in a comprehensive review of the origin of the disease. Focusing on Nigeria, he examines a multitude of factors that may play a role in the transmission of HIV, such as adolescent health care, demographics, social factors, and more. The goal of the study is to lessen HIV transmission by increasing knowledge about the disease. Governmental and nongovernmental organizations can use its findings to influence childhood health-care improvements and advance education to help reduce or eradicate HIV/AIDS transmission. With adolescents making up 23 percent of Nigeria's population—and given this group is likely to engage in risky behavior—there's never been a more critical time to strive to prevent the transmission of this devastating and, still, deadly virus.*

## Diversity and Inclusion in Quality Patient Care

*Springer No other hospital department cares for patients as diverse as those who come to the Emergency Department (ED). These patients encompass all stages and positions of life and health. Many belong to distinct minority cultures defined by the patient's sexual orientation and gender identity, disability, spirituality, language, race, and ethnicity. It has been well documented that minorities experience*

*inadequate emergency treatment and face poorer healthcare outcomes. Furthermore, research has established that the elderly, ethnic minorities, the poor, and persons with Medicaid coverage are more likely than other people to utilize the emergency department rather than primary care services. With the passage of the Affordable Care Act, particularly the Medicaid expansion, EDs across the United States are poised to care for an unprecedented number of underserved minorities. The need to equip emergency healthcare professionals to practice medicine that is culturally competent in the broadest possible sense has never been greater. Diversity and Inclusion in Quality Patient Care aims to fill this need.*

## South African AIDS Activism and Global Health Politics

*Springer South Africa has the world's largest number of people living with HIV. This book offers a history of AIDS activism in South Africa from its origins in gay and anti-apartheid activism to the formation and consolidation of the Treatment Action Campaign (TAC), including its central role in the global HIV treatment access movement.*

## Health Psychology, 2nd Edition

### An Interdisciplinary Approach to Health

Routledge *A truly interdisciplinary approach to the study of health, Health Psychology: An Interdisciplinary Approach uses the social ecological perspective to explore the impact of five systems on individual health outcomes: individual, culture/family, social/physical environment, health systems and health policy. In order to provide readers with an understanding of how health affects the individual on a mental and emotional level, the author has taken an interdisciplinary approach, considering the roles of anthropology, biology, economics, environmental studies, medicine, public health, and sociology.*

## Anthropology in Medical Education

### Sustaining Engagement and Impact

Springer Nature *This volume reflects on how anthropologists have engaged in medical education and aims to positively influence the future careers of anthropologists who are currently engaged or are considering a career in medical education. The volume is essential for medical educators, administrators, researchers, and practitioners, those interested in the history of medicine, global health, sociology of health and illness, medical and applied anthropology. For over a century, anthropologists have served in many roles in medical education: teaching, curriculum development, administration, research, and planning. Recent changes in medical education focusing on diversity, social determinants of health, and more*

*humanistic patient-centered care have opened the door for more anthropologists in medical schools. The chapter authors describe various ways in which anthropologists have engaged and are currently involved in training physicians, in various countries, as well as potential new directions in this field. They address critical topics such as: the history of anthropology in medical education; humanism, ethics, and the culture of medicine; interprofessional and collaborative clinical care; incorporating patient perspectives in practice; addressing social determinants of health, health disparities, and cultural competence; anthropological roles in planning and implementation of medical education programs; effective strategies for teaching medical students; comparative analysis of systems of care in Japan, Uganda, France, United Kingdom, Mexico, Canada and throughout the United States; and potential new directions for anthropological engagement with medicine. The volume overall emphasizes the important role of anthropology in educating physicians throughout the world to improve patient care and population health.*

# The CAPRISA Clinical Trials: HIV Treatment and Prevention

*Springer* Since its inception 14 years ago, CAPRISA has conducted numerous clinical studies that have influenced international TB-HIV treatment guidelines as well as HIV prevention through innovations in the microbicide and vaccine fields. This book provides a historical account of how each of CAPRISA's high impact studies was created, developed, implemented, analysed and communicated. In doing so, the reader is taken on a journey that provides glimpses into the genesis of research ideas and how this ultimately leads to a range of HIV prevention and treatment studies that have impacted the global response to the HIV and TB epidemics. Comprised of 5 sections, the book details the following: HIV epidemic in South Africa and the establishment of a research centre to undertake clinical, epidemiological and laboratory research on HIV. CAPRISA's clinical trials on HIV and HSV-2 prevention. These studies investigated the impact of tenofovir gel as topical antiretroviral pre-exposure prophylaxis (PrEP), implementation of topical PrEP through family planning clinics, conditional cash incentives for HIV prevention, HIV vaccines, and passive immunisation with broadly neutralising antibodies. CAPRISA's research on the treatment of HIV and TB co-infection. A review of the major scientific findings from the CAPRISA studies on acute infection and genital mucosal immunology. Essential support activities for the conduct of clinical trials, including research laboratories and pharmacies, as well as establishing effective communication and sustainable structures for community engagement to maintain effective and respectful partnerships with participating communities. The book concludes with a chapter about the challenges facing future HIV prevention and treatment trials. *The CAPRISA Clinical Trials: HIV Treatment and Prevention* is a resource for undergraduate and postgraduate students, health care providers, doctors, decision-makers and researchers who are seeking guidance and insights on clinical trials - their creation, conduct and impact.
