Vulvovaginal Candidosis

Theory and Practice

Springer Science & Business Media **Fungal infections in the female play an increasingly large role in everyday gynecological practice. This is the first book to deal comprehensively with vulvovaginal candidosis. Following an introduction outlining the incidence of yeasts in man, genital colonization in the female sex, yeast in pregnancy and neonatal mycoses, there is a description of the modes of infection and the known host reactions, as well as of the symptoms for diagnosis and therapy. Some 150 color illustrations depict all known facultative pathogenetic candida species and other potentially pathogenetic yeasts in pure culture and under the microscope. Clinical examples help explain the diagnosis and differential diagnosis. The volume provides the physician with handy, concise and practice-oriented guidelines to correct diagnosis and effective treatment of yeasts in the female patient.**

Immunisation against infectious diseases

The Stationery Office **This is the third edition of this publication which contains the latest information on vaccines and vaccination procedures for all the vaccine preventable infectious diseases that may occur in the UK or in travellers going outside of the UK, particularly those immunisations that comprise the routine immunisation programme for all children from birth to adolescence. It is divided into two sections: the first section covers principles, practices and procedures, including issues of consent, contraindications, storage, distribution and disposal of vaccines, surveillance and monitoring, and the Vaccine Damage Payment Scheme; the second section covers the range of different diseases and vaccines.**

Guidelines for the management of symptomatic sexually transmitted infections

World Health Organization **The WHO global health sector strategy on sexually transmitted infections, 2016-2021, endorsed by the World Health Assembly in 2016, aims to eliminate STIs as a public health threat by 2030. In 2019, WHO published estimates of new cases of chlamydia, gonorrhoea, syphilis and trichomoniasis. Recent changes in the epidemiology of STIs and progress in prevention, diagnosis and treatment of STIs and HIV have necessitated changes in approaches to STI prevention and management. To address these STIs, the most widely used approach in clinical settings is the syndromic management of STIs. In most resource-limited settings, the syndromic management flow**

charts are still the standard of care where laboratory diagnosis is not available or is hard to access. The objectives of these guidelines are to provide updated, evidence-informed clinical and practical recommendations on the case management of people with symptoms of STIs; and to support countries in updating their national guidelines for the case management of people with symptoms of STIs. These guidelines include the management of symptomatic infections related to urethral discharge syndrome, including persistent urethral discharge syndrome; vaginal discharge syndrome, including persistent vaginal discharge; anorectal infection; genital ulcer disease syndrome; and lower abdominal pain syndrome. These guidelines are intended for programme managers for STI prevention and control at the national level and the health-care providers at the frontline - primary, secondary and tertiary health care.

In some settings these guidelines can be used in any facilities where sick children are admitted for inpatient care. The Pocket Book is one of a series of documents and tools that support the Integrated Management.

Home Remedies and the Black Elderly

A Reference Manual for Health Care Providers

Pharmaceutical Information Assocs Changes in economics & demographics have resulted in the increased use of home remedies by the elderly, particularly those on fixed incomes. Traditional remedies, including those based on herbal medicine, continue to find widespread use among the urban & rural Black elderly. The authors have interviewed elderly black patients to develop a manual describing their use of products as diverse as alum, molasses, moth balls, & olive oil. The trends in usage of home remedies & possible detrimental effects of folk remedies are discussed. In addition, more than 100 individual folk remedies are discussed with annotations to the scientific literature. Developed by the College of Pharmacy & Institute of Gerontology of the University of Michigan, this book is a useful guide for those who must interact with the elderly of all races, particularly with respect to their self-medication practices. WHO Recommendations for Prevention and Treatment of Maternal Peripartum Infections

World Health Organization The goal of the present guideline is to consolidate guidance for effective interventions that are needed to reduce the global burden of maternal infections and its complications around the time of childbirth. This forms part of WHO's efforts towards improving the quality of care for leading causes of maternal death especially those clustered around the time of childbirth in the post-MDG era. Specifically it presents evidence-based recommendations on interventions for preventing and treating genital tract infections during labour childbirth or puerperium with the aim of improving outcomes for both mothers and newborns. The primary audience for this guideline is health professionals who are responsible for developing national and local health protocols and policies as well as managers of maternal and child health programmes and policy-makers in all settings. The guideline will also be useful to those directly providing care to pregnant women including obstetricians midwives nurses and general practitioners. The information in this guideline will be useful for developing job aids and tools for both pre- and inservice training of health workers to enhance their delivery of care to prevent and treat maternal peripartum infections.

Consolidated guidelines on HIV prevention, testing, treatment, service delivery and monitoring

recommendations for a public health approach

World Health Organization These consolidated guidelines on HIV prevention, testing, treatment, service delivery and monitoring bring together existing and new clinical and programmatic recommendations across different ages, populations and settings, bringing together all relevant WHO guidance on HIV produced since 2016. It serves as an update to the previous edition of the consolidated guidelines on HIV. These guidelines continue to be structured along the continuum of HIV care. Information on new combination prevention approaches, HIV testing, ARV regimens and treatment monitoring are included. There is a new chapter on advanced HIV disease that integrates updated guidance on the management of important HIV comorbidities, including cryptococcal disease, histoplasmosis and tuberculosis. The chapter on general HIV care, contains a new section on palliative care and pain management, and up to date information on treatment of several neglected tropical diseases, such as visceral leishmaniasis and Buruli ulcer. New recommendations for screening and treating of cervical pre-cancer lesions in women living with HIV are also addressed in this chapter. Guidance on service delivery was expanded to help the implementation and strengthening the HIV care cascade. Importantly, this guidance emphasizes the need for differentiated approaches to care for people who are established on ART, such as reduced frequency of clinic visits, use of multi-month drug dispensing and implementation of community ART distribution. The adoption of these efficiencies is essential to improve the quality of care of people receiving treatment and reduce the burden on health facilities, particularly in resource limited settings.

Decontamination in Hospitals and Healthcare

Woodhead Publishing Decontamination in Hospitals and Healthcare brings an understanding of decontamination practices and the development of technologies for cleaning and control of infection to a wide audience interested in public health, including healthcare specialists, scientists, students or patients. Part one highlights the importance and history of decontamination in hospitals and healthcare before exploring the role of standards in decontamination, infection control in Europe, and future trends in the area. Part two focuses on decontamination practices in hospitals and healthcare. It considers the role of the nurse in decontamination, the issues of microbial biofilm in waterlines, control of waterborne microorganisms, and the use of gaseous decontamination technologies. Further chapters explore decontamination of prions, the use of protective clothing, no-touch automated room disinfection systems, and controlling the presence of microorganisms in hospitals. Part three discusses practices for decontamination and sterilization of surgical instruments and endoscopes. These chapters examine a range of guidance documents, including the choice framework for local policy and procedures for decontamination of surgical instruments, as well as novel technologies for cleaning and detection of contamination. Decontamination in Hospitals and Healthcare provides a reference source on decontamination for public health professionals and students concerned with healthcare. It is particularly useful for scientists in microbiology and disinfection/decontamination laboratories, healthcare workers who use disinfectants, students in microbiology, clinicians, members of the Institute of Decontamination Sciences/Central Sterilising Club, and those employed in the Central Sterile Services departments of healthcare facilities. Discusses decontamination processes in Europe Provides an in-depth understanding into decontamination in healthcare settings, specifically hospitals and dental practices Examines the decontamination of surgical equipment and endoscopes

Comprehensive Cervical Cancer Control A Guide to Essential Practice

This publication gives a broad vision of what a comprehensive approach to cervical cancer prevention and control means. In particular, it outlines the complementary strategies for comprehensive cervical cancer prevention and control, and highlights the need for collaboration across programs, organizations and partners. This new guide updates the 2006 edition and includes the recent promising developments in technologies and strategies that can address the gaps between the needs for and availability of services for cervical cancer prevention and control. In the last few years, there has been an emergence of ground-breaking new strategies in cervical cancer prevention and control. Because such strategies require evidence-based evaluation for decision-making in clinical practice and program planning, a World Health Organization (WHO) Steering Committee and a group of invited experts met in Geneva, Switzerland, in September 2010, to ensure that the WHO's guidance on cervical cancer continues to encompass all the relevant technologies and strategies. This edition of the guide has two new chapters: Chapter 2: Essentials for cervical cancer prevention and control programs and Chapter 4: HPV vaccination. One chapter has been newly organized: Chapter 5: Screening and treatment of cervical pre-cancer. All other chapters have been thoroughly updated and edited as needed. This guide aims to assist those responsible for providing services aimed at reducing the burden of cervical cancer on women, their communities and health systems. It focuses on the knowledge, best practices and communication skills needed by health-care providers working at community and primary and secondary levels of care to offer quality services for prevention, screening, treatment and palliative care for cervical cancer: the full continuum of care. The guide is intended primarily for health-care providers in health centers and district hospitals

who deal with women's health and/or adolescent's health, but it may also be of interest to community-based and tertiary-level providers. Providers and managers at the sub-national level whose responsibilities may include program planning would be interested in Chapter 2 on program essentials, which covers implementation, monitoring and evaluating, and/or supervising and training other health-care providers. National-level decision-makers will find updated evidence-based information in this guide on what works in cervical cancer prevention and control programs, which may be of use as a basis for updating their own guidelines and protocols.

Caring for People who Sniff Petrol Or Other Volatile Substances

A Quick Reference Guide for Health Workers

These guidelines provide recommendations that outline the critical aspects of infection prevention and control. The recommendations were developed using the best available evidence and consensus methods by the Infection Control Steering Committee. They have been prioritised as key areas to prevent and control infection in a healthcare facility. It is recognised that the level of risk may differ according to the different types of facility and therefore some recommendations should be justified by risk assessment. When implementing these recommendations all healthcare facilities need to consider the risk of transmission of infection and implement according to their specific setting and circumstances.
