Humankind A Hopeful History Bloomsbury Publishing *THE SUNDAY TIMES AND NEW YORK TIMES BESTSELLER A Guardian, Daily Telegraph, New Statesman and Daily Express Book of the Year 'Hugely, highly and happily recommended' Stephen Fry 'You should read Humankind. You'll learn a lot (I did) and you'll have good reason to feel better about the human race' Tim Harford 'The book we need right now' Daily Telegraph 'Made me see humanity from a fresh perspective' Yuval Noah Harari It's a belief that unites the left and right, psychologists and philosophers, writers and historians. It drives the headlines that surround us and the laws that touch our lives. From Machiavelli to Hobbes, Freud to Dawkins, the roots of this belief have sunk deep into Western thought. Human beings, we're taught, are by nature selfish and governed by self-interest. Humankind makes a new argument: that it is realistic, as well as revolutionary, to assume that people are good. The instinct to cooperate rather than compete, trust rather than distrust, has an evolutionary basis going right back to the beginning of Homo sapiens. By thinking the worst of others, we bring out the worst in our politics and economics too. In this major book, internationally bestselling author Rutger Bregman takes some of the world's most famous studies and events and reframes them, providing a new perspective on the last 200,000 years of human history. From the real-life Lord of the Flies to the Blitz, a Siberian fox farm to an infamous New York murder, Stanley Milgram's Yale shock machine to the Stanford prison experiment, Bregman shows how believing in human kindness and altruism can be a new way to think – and act as the foundation for achieving true change in our society. It is time for a new view of human nature. **Global Marketing, Global Edition** Pearson Higher Ed For undergraduate and graduate courses in*

Rapid Prototyping Laser-based and Other Technologies Springer Science & Business Media Since the dawn of civilization, mankind has been engaged in the conception and manufacture of discrete products to serve the functional needs of local customers and the tools (technology) needed by other craftsmen. In fact, much of the progress in civilization can be attributed to progress in discrete product manufacture. The functionality of a discrete object depends on two entities: form, and material composition. For instance, the aesthetic appearance of a sculpture depends upon its form whereas its durability depends upon the material composition. An ideal manufacturing process is one that is able to automatically generate any form (freeform) in any material. However, unfortunately, most traditional manufacturing processes are severely constrained on all these counts. There are three basic ways of creating form: conservative, subtractive, and additive. In the first approach, we take a material and apply the needed forces to deform it to the required shape, without either adding or removing material, i. e. , we conserve material. Many industrial processes such as forging, casting, sheet metal forming and extrusion emulate this approach. A problem with many of these approaches is that they focus on form generation without explicitly providing any means for controlling material composition. In fact, even form is not created directly. They merely duplicate the external form embedded in external tooling such as dies and molds and the internal form embedded in cores, etc. Till recently, we have had to resort to the 'subtractive' approach to create the form of the tooling.

Traditional and Alternative Avenues Palgrave Macmillan *This book explores the evolution of the banking sector and the financing tools it fosters, addressing the impact of new regulations and the ensuing opportunities for financial institutions, firms, and individuals. Written in two parts, the project includes papers presented at the 2019 Annual Conference of the Wolpertinger Club - The European Association of University Teachers in Banking and Finance. The first part addresses the impact of policy changes on banks and financial institutions, particularly the impact of recent changes in European policy. The authors explore how policy has been, and is, communicated and how it shapes new incentives and challenges for the banking sector and institutional and individual investors. The book touches upon the debate on the 'bail-in' vs 'bail-out' options and reviews new opportunities for investors on covered and subordinated bond markets in Europe, covering the new regulatory structure provided by the European authorities. The second part explores new financing tools besides the traditional banking sector available to firms and individuals, examining financing options for firms and individuals, and describing the role that alternative capital-market tools such as mini bonds and crowdfunding are playing within the landscape of SME financing. Arguing that financing decisions can ultimately affect the survival rate of startups, this edited collection will be valuable to those researching both finance and business, but particularly to those studying banking, financial institutions and entrepreneurial finance.* **An Introduction to Applied Cognitive Psychology** Psychology Press *This book offers a student friendly review of recent research in the application of cognitive methods, theories and models to real-world scenarios.* **Radio Frequency and Microwave Electronics Illustrated** Prentice Hall *Foreword by Dr. Asad Madni, C. While this version features a new Dummies cover and design, the content is the same as the prior release and should not be considered a new or updated product. The top-selling auto repair guide--400,000 copies sold--now extensively reorganized and updated Forty-eight percent of U.S. households perform at least some automobile maintenance on their own, with women now accounting for one third of this \$34 billion automotive do-it-yourself market. For new or would-be do-it-yourself mechanics, this illustrated how-to guide has long been a must and now it's even better. A complete reorganization now puts relevant repair and maintenance information directly after each automotive system overview, making it much easier to find hands-on fix-it instructions. Author Deanna Sclar has updated systems and repair information throughout, eliminating discussions of carburetors and adding coverage of hybrid and alternative fuel vehicles. She's also revised schedules for tune-ups and oil changes, included driving tips that can save on maintenance and repair costs, and added new advice on troubleshooting problems and determining when to call in a professional mechanic. For anyone who wants to save money on car repairs and maintenance, this book is the place to start. Deanna Sclar (Long Beach, CA), an acclaimed auto repair expert and consumer advocate, has contributed to the *Los Angeles Times* and has been interviewed on the *Today* show, *NBC Nightly News*, and other television programs. **Wind and Power in the Anthropocene** Between 2009 and 2013 Cymene Howe and Dominic Boyer conducted fieldwork in Mexico's Isthmus of Tehuantepec to examine the political, social, and ecological dimensions of moving from fossil fuels to wind power. Their work manifested itself as a new ethnographic form: the duograph--a combination of two single-authored books that draw on shared field sites, archives, and encounters that can be productively read together, yet also stand alone in their analytic ambitions. In his volume, *Energopolitics*, Boyer examines the politics of wind power and how it is shaped by myriad factors, from the legacies of settler colonialism and indigenous resistance to state bureaucracy and corporate investment. Drawing on interviews with activists, campesinos, engineers, bureaucrats, politicians, and bankers, Boyer outlines the fundamental impact of energy and fuel on political power. Boyer also demonstrates how large conceptual frameworks cannot adequately explain the fraught and uniquely complicated conditions on the Isthmus, illustrating the need to resist narratives of Anthropocenic universalism and to attend to local particularities. In her volume, *Ecologies*, Howe narrates how an antidote to the Anthropocene became both failure and success. Tracking the development of what would have been Latin America's largest wind park, Howe documents indigenous people's resistance to the project and the political and corporate climate that derailed its renewable energy potential. Using feminist and more-than-human theories, Howe demonstrates how the dynamics of energy and environment cannot be captured without understanding how human aspirations for energy articulate with nonhuman beings, technomaterial objects, and the geophysical forces that are at the heart of wind and power. **Human-Computer Interaction - HCI International 2021** Springer This set of 45 volumes constitutes
